Isaca

Exam Questions CISM

Certified Information Security Manager

NEW QUESTION 1
It is MOST important that information security architecture be aligned with which of the following?

A. Industry best practices
B. Information technology plans
C. Information security best practices
D. Business objectives and goals

Answer: D

Explanation:

Information security architecture should always be properly aligned with business goals and objectives. Alignment with IT plans or industry and security best practices is secondary by comparison.

NEW QUESTION 2
Which of the following would BEST ensure the success of information security governance within an organization?

A. Steering committees approve security projects
B. Security policy training provided to all managers
C. Security training available to all employees on the intranet
D. Steering committees enforce compliance with laws and regulations

Answer: A

Explanation:

The existence of a steering committee that approves all security projects would be an indication of the existence of a good governance program. Compliance with laws and regulations is part of the responsibility of the steering committee but it is not a full answer. Awareness training is important at all levels in any medium, and also an indicator of good governance. However, it must be guided and approved as a security project by the steering committee.

NEW QUESTION 3
From an information security manager perspective, what is the immediate benefit of clearly-defined roles and responsibilities?

A. Enhanced policy compliance
B. Improved procedure flows
C. Segregation of duties
D. Better accountability

Answer: D

Explanation:

Without well-defined roles and responsibilities, there cannot be accountability. Choice A is incorrect because policy compliance requires adequately defined accountability first and therefore is a byproduct. Choice B is incorrect because people can be assigned to execute procedures that are not well designed. Choice C is incorrect because segregation of duties is not automatic, and roles may still include conflicting duties.

NEW QUESTION 4
An outcome of effective security governance is:

A. business dependency assessment
B. strategic alignmen
C. risk assessmen
D. plannin

Answer: B

Explanation:

Business dependency assessment is a process of determining the dependency of a business on certain information resources. It is not an outcome or a product of effective security management. Strategic alignment is an outcome of effective security governance. Where there is good governance, there is likely to be strategic alignment. Risk assessment is not an outcome of effective security governance; it is a process. Planning comes at the beginning of effective security governance, and is not an outcome but a process.

NEW QUESTION 5
A multinational organization operating in fifteen countries is considering implementing an information security program. Which factor will MOST influence the design of the
Information security program?

A. Representation by regional business leaders
B. Composition of the board
C. Cultures of the different countries
D. IT security skills

Answer: C

Explanation:

Culture has a significant impact on how information security will be implemented. Representation by regional business leaders may not have a major influence unless it concerns cultural issues. Composition of the board may not have a significant impact compared to cultural issues. IT security skills are not as key or high impact in designing a multinational information security program as would be cultural issues.

NEW QUESTION 6
Which of the following BEST contributes to the development of a security governance framework that supports the maturity model concept?

A. Continuous analysis, monitoring and feedback
B. Continuous monitoring of the return on security investment (ROSD
C. Continuous risk reduction
D. Key risk indicator (KRD setup to security management processes

Answer: A

Explanation:

To improve the governance framework and achieve a higher level of maturity, an organization needs to conduct continuous analysis, monitoring and feedback compared to the current state of maturity. Return on security investment (ROSD may show the performance result of the security-related activities; however, the result is interpreted in terms of money and extends to multiple facets of security initiatives. Thus, it may not be an adequate option. Continuous risk reduction would demonstrate the effectiveness of the security governance framework, but does not indicate a higher level of maturity. Key risk indicator (KRD setup is a tool to be used in internal control assessment. KRI setup
presents a threshold to alert management when controls are being compromised in business processes. This is a control tool rather than a maturity model support tool.

NEW QUESTION 7
Who is responsible for ensuring that information is categorized and that specific protective measures are taken?

A. The security officer
B. Senior management
C. The end user
D. The custodian

Answer: B

Explanation:

Routine administration of all aspects of security is delegated, but top management must retain overall responsibility. The security officer supports and implements information security for senior management. The end user does not perform categorization. The custodian supports and implements information security measures as directed.

NEW QUESTION 8
Information security governance is PRIMARILY driven by:

A. technology constraint
B. regulatory requirement
C. litigation potentia
D. business strateg

Answer: D

Explanation:

Governance is directly tied to the strategy and direction of the business. Technology constraints, regulatory requirements and litigation potential are all important factors, but they are necessarily in line with the business strategy.

NEW QUESTION 9
The chief information security officer (CISO) should ideally have a direct reporting relationship to the:

A. head of internal audi
B. chief operations officer (COO).
C. chief technology officer (CTO).
D. legal counse

Answer: B

Explanation:

The chief information security officer (CISO) should ideally report to as high a level within the organization as possible. Among the choices given, the chief operations officer (COO) would have not only the appropriate level but also the knowledge of day-to-day operations. The head of internal audit and legal counsel would make good secondary choices, although they would not be as knowledgeable of the operations. Reporting to the chief technology officer (CTO) could become problematic as the CTO's goals for the infrastructure might, at times, run counter to the goals of information security.

NEW QUESTION 10
When an information security manager is developing a strategic plan for information security, the timeline for the plan should be:

A. aligned with the IT strategic pla
B. based on the current rate of technological chang
C. three-to-five years for both hardware and softwar
D. aligned with the business strateg

Answer: D

Explanation:

Any planning for information security should be properly aligned with the needs of the business. Technology should not come before the needs of the business, nor should planning be done on an artificial timetable that ignores business needs.

NEW QUESTION 10
Who should be responsible for enforcing access rights to application data?

A. Data owners
B. Business process owners
C. The security steering committee
D. Security administrators

Answer: D

Explanation:

As custodians, security administrators are responsible for enforcing access rights to data. Data owners are responsible for approving these access rights. Business process owners are sometimes the data owners as well, and would not be responsible for enforcement. The security steering committee would not be responsible for enforcement.

NEW QUESTION 13
Information security policy enforcement is the responsibility of the:

A. security steering committe
B. chief information officer (CIO).
C. chief information security officer (CISO).
D. chief compliance officer (CCO).

Answer: C

Explanation:

Information security policy enforcement is the responsibility of the chief information security officer (CISO), first and foremost. The board of directors and executive management should ensure that a security policy is in line with corporate objectives. The chief information officer (CIO) and the chief compliance officer (CCO) are involved in the enforcement of the policy but are not directly responsible for it.

NEW QUESTION 15
Which of the following factors is a PRIMARY driver for information security governance that does not require any further justification?

A. Alignment with industry best practices
B. Business continuity investment
C. Business benefits
D. Regulatory compliance

Answer: D

Explanation:

Regulatory compliance can be a standalone driver for an information security governance measure. No further analysis nor justification is required since the entity has no choice in the regulatory requirements. Buy-in from business managers must be obtained by the information security manager when an information security governance measure is sought based on its alignment with industry best practices. Business continuity investment needs to be justified by business impact analysis. When an information security governance measure is sought based on qualitative business benefits, further analysis is required to determine whether the benefits outweigh the cost of the information security governance measure in question.

NEW QUESTION 19
Which of the following is the MOST important to keep in mind when assessing the value of information?

A. The potential financial loss
B. The cost of recreating the information
C. The cost of insurance coverage
D. Regulatory requirement

Answer: A

Explanation:

The potential for financial loss is always a key factor when assessing the value of information. Choices B, C and D may be contributors, but not the key factor.

NEW QUESTION 22

The MOST complete business case for security solutions is one that.

A. includes appropriate justificatio
B. explains the current risk profil
C. details regulatory requirement
D. identifies incidents and losse

Answer: A

Explanation:

Management is primarily interested in security solutions that can address risks in the most cost-effective way. To address the needs of an organization, a business case should address appropriate security solutions in line with the organizational strategy.

NEW QUESTION 23
What would a security manager PRIMARILY utilize when proposing the implementation of a security solution?

A. Risk assessment report
B. Technical evaluation report
C. Business case
D. Budgetary requirements

Answer: C

Explanation:

The information security manager needs to prioritize the controls based on risk management and the requirements of the organization. The information security manager must look at the costs of the various controls and compare them against the benefit the organization will receive from the security solution. The information security manager needs to have knowledge of the development of business cases to illustrate the costs and benefits of the various controls. All other choices are supplemental.

NEW QUESTION 26
Which of the following are likely to be updated MOST frequently?

A. Procedures for hardening database servers
B. Standards for password length and complexity
C. Policies addressing information security governance
D. Standards for document retention and destruction

Answer: A

Explanation:

Policies and standards should generally be more static and less subject to frequent change. Procedures on the other hand, especially with regard to the hardening of operating systems, will be subject to constant change; as operating systems change and evolve, the procedures for hardening will have to keep pace.

NEW QUESTION 31
Which of the following is the MOST important prerequisite for establishing information security management within an organization?

A. Senior management commitment
B. Information security framework
C. Information security organizational structure
D. Information security policy

Answer: A

Explanation:

Senior management commitment is necessary in order for each of the other elements to succeed. Without senior management commitment, the other elements will likely be ignored within the organization.

NEW QUESTION 34
Which of the following is a benefit of information security governance?

A. Reduction of the potential for civil or legal liability
B. Questioning trust in vendor relationships
C. Increasing the risk of decisions based on incomplete management information
D. Direct involvement of senior management in developing control processes

Answer: A

Explanation:

Information security governance decreases the risk of civil or legal liability. The remaining answers are incorrect. Option D appears to be correct, but senior management would provide oversight and approval as opposed to direct involvement in developing control processes.

NEW QUESTION 39

What is the PRIMARY role of the information security manager in the process of information classification within an organization?

A. Defining and ratifying the classification structure of information assets
B. Deciding the classification levels applied to the organization's information assets
C. Securing information assets in accordance with their classification
D. Checking if information assets have been classified properly

Answer: A

Explanation:

Defining and ratifying the classification structure of information assets is the primary role of the information security manager in the process of information classification within the organization. Choice B is incorrect because the final responsibility for deciding the classification levels rests with the data owners. Choice C is incorrect because the job of securing information assets is the responsibility of the data custodians. Choice D may be a role of an information security manager but is not the key role in this context.

NEW QUESTION 41
Which of the following is characteristic of centralized information security management?

A. More expensive to administer
B. Better adherence to policies
C. More aligned with business unit needs
D. Faster turnaround of requests

Answer: B

Explanation:

Centralization of information security management results in greater uniformity and better adherence to security policies. It is generally less expensive to administer due to the economics of scale. However, turnaround can be slower due to the lack of alignment with business units.

NEW QUESTION 44
Senior management commitment and support for information security can BEST be obtained through presentations that:

A. use illustrative examples of successful attack
B. explain the technical risks to the organizatio
C. evaluate the organization against best security practice
D. tie security risks to key business objective

Answer: D

Explanation:

Senior management seeks to understand the business justification for investing in security. This can best be accomplished by tying security to key business objectives. Senior management will not be as interested in technical risks or examples of successful attacks if they are not tied to the impact on business environment and objectives. Industry best practices are important to senior management but, again, senior management will give them the right level of importance when they are presented in terms of key business objectives.

NEW QUESTION 48
Effective IT governance is BEST ensured by:

A. utilizing a bottom-up approac
B. management by the IT departmen
C. referring the matter to the organization's legal departmen
D. utilizing a top-down approac

Answer: D

Explanation:

Effective IT governance needs to be a top-down initiative, with the board and executive management setting clear policies, goals and objectives and providing for ongoing monitoring of the same. Focus on the regulatory issues and management priorities may not be reflected effectively by a bottom-up approach. IT governance affects the entire organization and is not a matter concerning only the management of IT. The legal department is part of the overall governance process, but cannot take full responsibility.

NEW QUESTION 49
Minimum standards for securing the technical infrastructure should be defined in a security:

A. strateg
B. guideline
C. mode
D. architectur

Answer: D

Explanation:

Minimum standards for securing the technical infrastructure should be defined in a security architecture document. This document defines how components are

secured and the security services that should be in place. A strategy is a broad, high-level document. A guideline is advisory in nature, while a security model shows the relationships between components.

NEW QUESTION 52
Reviewing which of the following would BEST ensure that security controls are effective?

A. Risk assessment policies
B. Return on security investment
C. Security metrics
D. User access rights

Answer: C

Explanation:

Reviewing security metrics provides senior management a snapshot view and trends of an organization's security posture. Choice A is incorrect because reviewing risk assessment policies would not ensure that the controls are actually working. Choice B is incorrect because reviewing returns on security investments provides business justifications in implementing controls, but does not measure effectiveness of the control itself. Choice D is incorrect because reviewing user access rights is a joint responsibility of the data custodian and the data owner, and does not measure control effectiveness.

NEW QUESTION 54
How would an information security manager balance the potentially conflicting requirements of an international organization's security standards and local regulation?

A. Give organization standards preference over local regulations
B. Follow local regulations only
C. Make the organization aware of those standards where local regulations causes conflicts
D. Negotiate a local version of the organization standards

Answer: D

Explanation:

Adherence to local regulations must always be the priority. Not following local regulations can prove detrimental to the group organization. Following local regulations only is incorrect since there needs to be some recognition of organization requirements. Making an organization aware of standards is a sensible step, but is not a total solution. Negotiating a local version of the organization standards is the most effective compromise in this situation.

NEW QUESTION 56
Which of the following would BEST prepare an information security manager for regulatory reviews?

A. Assign an information security administrator as regulatory liaison
B. Perform self-assessments using regulatory guidelines and reports
C. Assess previous regulatory reports with process owners input
D. Ensure all regulatory inquiries are sanctioned by the legal department

Answer: B

Explanation:

Self-assessments provide the best feedback on readiness and permit identification of items requiring remediation. Directing regulators to a specific person or department, or assessing previous reports, is not as effective. The legal department should review all formal inquiries but this does not help prepare for a regulatory review.

NEW QUESTION 58
To justify the need to invest in a forensic analysis tool, an information security manager should FIRST:

A. review the functionalities and implementation requirements of the solutio
B. review comparison reports of tool implementation in peer companie
C. provide examples of situations where such a tool would be usefu
D. substantiate the investment in meeting organizational need

Answer: D

Explanation:

Any investment must be reviewed to determine whether it is cost effective and supports the organizational strategy. It is important to review the features and functionalities provided by such a tool, and to provide examples of situations where the tool would be useful, but that comes after substantiating the investment and return on investment to the organization.

NEW QUESTION 63
The organization has decided to outsource the majority of the IT department with a vendor that is hosting servers in a foreign country. Of the following, which is the MOST critical security consideration?

A. Laws and regulations of the country of origin may not be enforceable in the foreign countr
B. A security breach notification might get delayed due to the time differenc
C. Additional network intrusion detection sensors should be installed, resulting in an additional cos
D. The company could lose physical control over the server and be unable to monitor the physical security posture of the server

Answer: A

Explanation:

A company is held to the local laws and regulations of the country in which the company resides, even if the company decides to place servers with a vendor that hosts the servers in a foreign country. A potential violation of local laws applicable to the company might not be recognized or rectified (i.e., prosecuted) due to the lack of knowledge of the local laws that are applicable and the inability to enforce the laws. Option B is not a problem. Time difference does not play a role in a 24/7 environment. Pagers, cellular phones, telephones, etc. are usually available to communicate notifications. Option C is a manageable problem that requires additional funding, but can be addressed. Option D is a problem that can be addressed. Most hosting providers have standardized the level of physical security that is in place. Regular physical audits or a SAS 70 report can address such concerns.

NEW QUESTION 66
At what stage of the applications development process should the security department initially become involved?

A. When requested
B. At testing
C. At programming
D. At detail requirements

Answer: D

Explanation:

Information security has to be integrated into the requirements of the application's design. It should also be part of the information security governance of the organization. The application owner may not make a timely request for security involvement. It is too late during systems testing, since the requirements have already been agreed upon. Code reviews are part of the final quality assurance process.

NEW QUESTION 70
Acceptable levels of information security risk should be determined by:

A. legal counse
B. security managemen
C. external auditor
D. die steering committe

Answer: D

Explanation:

Senior management, represented in the steering committee, has ultimate responsibility for determining what levels of risk the organization is willing to assume. Legal counsel, the external auditors and security management are not in a position to make such a decision.

NEW QUESTION 73
Data owners must provide a safe and secure environment to ensure confidentiality, integrity and availability of the transaction. This is an example of an information security:

A. baselin
B. strateg
C. procedur
D. polic

Answer: D

Explanation:

A policy is a high-level statement of an organization's beliefs, goals, roles and objectives. Baselines assume a minimum security level throughout an organization. The information security strategy aligns the information security program with business objectives rather than making control statements. A procedure is a step-by-step process of how policy and standards will be implemented.

NEW QUESTION 76
When identifying legal and regulatory issues affecting information security, which of the following would represent the BEST approach to developing information security policies?

A. Create separate policies to address each regulation
B. Develop policies that meet all mandated requirements
C. Incorporate policy statements provided by regulators
D. Develop a compliance risk assessment

Answer: B

Explanation:

It will be much more efficient to craft all relevant requirements into policies than to create separate versions. Using statements provided by regulators will not capture all of the requirements mandated by different regulators. A compliance risk assessment is an important tool to verify that procedures ensure compliance once the policies have been established.

NEW QUESTION 79

A good privacy statement should include:

A. notification of liability on accuracy of informatio
B. notification that information will be encrypte
C. what the company will do with information it collect
D. a description of the information classification proces

Answer: C

Explanation:

Most privacy laws and regulations require disclosure on how information will be used. Choice A is incorrect because that information should be located in the web site's disclaimer. Choice B is incorrect because, although encryption may be applied, this is not generally disclosed. Choice D is incorrect because information classification would be contained in a separate policy.

NEW QUESTION 84
An information security strategy document that includes specific links to an organization's business activities is PRIMARILY an indicator of:

A. performance measuremen
B. integratio
C. alignmen
D. value deliver

Answer: C

Explanation:

Strategic alignment of security with business objectives is a key indicator of performance measurement. In guiding a security program, a meaningful performance measurement will also rely on an understanding of business objectives, which will be an outcome of alignment. Business linkages do not by themselves indicate integration or value delivery. While alignment is an important precondition, it is not as important an indicator.

NEW QUESTION 89
Retention of business records should PRIMARILY be based on:

A. business strategy and directio
B. regulatory and legal requirement
C. storage capacity and longevit
D. business ease and value analysi

Answer: B

Explanation:

Retention of business records is generally driven by legal and regulatory requirements. Business strategy and direction would not normally apply nor would they override legal and regulatory requirements. Storage capacity and longevity are important but secondary issues. Business case and value analysis would be secondary to complying with legal and regulatory requirements.

NEW QUESTION 91
To achieve effective strategic alignment of security initiatives, it is important that:

A. Steering committee leadership be selected by rotatio
B. Inputs be obtained and consensus achieved between the major organizational unit
C. The business strategy be updated periodicall
D. Procedures and standards be approved by all departmental head

Answer: B

Explanation:

It is important to achieve consensus on risks and controls, and obtain inputs from various organizational entities since security needs to be aligned to the needs of the organization. Rotation of steering committee leadership does not help in achieving strategic alignment. Updating business strategy does not lead to strategic alignment of security initiatives. Procedures and standards need not be approved by all departmental heads

NEW QUESTION 95
An organization's board of directors has learned of recent legislation requiring organizations within the industry to enact specific safeguards to protect confidential customer information. What actions should the board take next?

A. Direct information security on what they need to do
B. Research solutions to determine the proper solutions
C. Require management to report on compliance
D. Nothing; information security does not report to the board

Answer: C

Explanation:

Information security governance is the responsibility of the board of directors and executive management. In this instance, the appropriate action is to ensure that a plan is in place for implementation of needed safeguards and to require updates on that implementation.

NEW QUESTION 96
When an organization is setting up a relationship with a third-party IT service provider, which of the following is one of the MOST important topics to include in the contract from a security standpoint?

A. Compliance with international security standard
B. Use of a two-factor authentication syste
C. Existence of an alternate hot site in case of business disruptio
D. Compliance with the organization's information security requirement

Answer: D

Explanation:

Prom a security standpoint, compliance with the organization's information security requirements is one of the most important topics that should be included in the contract with third-party service provider. The scope of implemented controls in any ISO 27001-compliant organization depends on the security requirements established by each organization. Requiring compliance only with this security standard does not guarantee that a service provider complies with the organization's security requirements. The requirement to use a specific kind of control methodology is not usually stated in the contract with third-party service providers.

NEW QUESTION 101
In implementing information security governance, the information security manager is PRIMARILY responsible for:

A. developing the security strateg
B. reviewing the security strateg
C. communicating the security strateg
D. approving the security strategy

Answer: A

Explanation:

The information security manager is responsible for developing a security strategy based on business objectives with the help of business process owners. Reviewing the security strategy is the responsibility of a steering committee. The information security manager is not necessarily responsible for communicating or approving the security strategy.

NEW QUESTION 106
Which of the following is the MOST appropriate position to sponsor the design and implementation of a new security infrastructure in a large global enterprise?

A. Chief security officer (CSO)
B. Chief operating officer (COO)
C. Chief privacy officer (CPO)
D. Chief legal counsel (CLC)

Answer: B

Explanation:

The chief operating officer (COO) is most knowledgeable of business operations and objectives. The chief privacy officer (CPO) and the chief legal counsel (CLC) may not have the knowledge of the day- to-day business operations to ensure proper guidance, although they have the same influence within the organization as the COO. Although the chief security officer (CSO) is knowledgeable of what is needed, the sponsor for this task should be someone with far-reaching influence across the organization.

NEW QUESTION 108
Which of the following is the BEST reason to perform a business impact analysis (BIA)?

A. To help determine the current state of risk
B. To budget appropriately for needed controls
C. To satisfy regulatory requirements
D. To analyze the effect on the business

Answer: A

Explanation:

The BIA is included as part of the process to determine the current state of risk and helps determine the acceptable levels of response from impacts and the current level of response, leading to a gap analysis. Budgeting appropriately may come as a result, but is not the reason to perform the analysis. Performing an analysis may satisfy regulatory requirements, bill is not the reason to perform one. Analyzing the effect on the business is part of the process, but one must also determine the needs or acceptable effect or response.

NEW QUESTION 113
Which of the following should be the FIRST step in developing an information security plan?

A. Perform a technical vulnerabilities assessment
B. Analyze the current business strategy
C. Perform a business impact analysis
D. Assess the current levels of security awareness

Answer: B

Explanation:

Prior to assessing technical vulnerabilities or levels of security awareness, an information security manager needs to gain an understanding of the current business strategy and direction. A business impact analysis should be performed prior to developing a business continuity plan, but this would not be an appropriate first step in developing an information security strategy because it focuses on availability.

NEW QUESTION 116
When designing an information security quarterly report to management, the MOST important element to be considered should be the:

A. information security metric
B. knowledge required to analyze each issu
C. linkage to business area objective
D. baseline against which metrics are evaluate

Answer: C

Explanation:

The link to business objectives is the most important clement that would be considered by management. Information security metrics should be put in the context of impact to management objectives. Although important, the security knowledge required would not be the first element to be considered. Baselining against the information security metrics will be considered later in the process.

NEW QUESTION 121
An information security manager at a global organization has to ensure that the local information security program will initially ensure compliance with the:

A. corporate data privacy polic
B. data privacy policy where data are collecte
C. data privacy policy of the headquarters' countr
D. data privacy directive applicable globall

Answer: B

Explanation:

As a subsidiary, the local entity will have to comply with the local law for data collected in the country. Senior management will be accountable for this legal compliance. The policy, being internal, cannot supersede the local law. Additionally, with local regulations differing from the country in which the organization is headquartered, it is improbable that a group wide policy will address all the local legal requirements. In case of data collected locally (and potentially transferred to a country with a different data privacy regulation), the local law applies, not the law applicable to the head office. The data privacy laws are country-specific.

NEW QUESTION 126
Which of the following should be included in an annual information security budget that is submitted for management approval?

A. A cost-benefit analysis of budgeted resources
B. All of the resources that are recommended by the business
C. Total cost of ownership (TC'O)
D. Baseline comparisons

Answer: A

Explanation:

A brief explanation of the benefit of expenditures in the budget helps to convey the context of how the purchases that are being requested meet goals and objectives, which in turn helps build credibility for the information security function or program. Explanations of benefits also help engage senior management in the support of the information security program. While the budget should consider all inputs and recommendations that are received from the business, the budget that is ultimately submitted to management for approval should include only those elements that are intended for purchase. TC'O may be requested by management and may be provided in an addendum to a given purchase request, but is not usually included in an annual budget. Baseline comparisons (cost comparisons with other companies or industries) may be useful in developing a budget or providing justification in an internal review for an individual purchase, but would not be included with a request for budget approval.

NEW QUESTION 130
The data access requirements for an application should be determined by the:

A. legal departmen
B. compliance office
C. information security manage
D. business owne

Answer: D

Explanation:

Business owners are ultimately responsible for their applications. The legal department, compliance officer and information security manager all can advise, but do not have final responsibility.

NEW QUESTION 131
Temporarily deactivating some monitoring processes, even if supported by an acceptance of operational risk, may not be acceptable to the information security manager if:

A. it implies compliance risk
B. short-term impact cannot be determine
C. it violates industry security practice
D. changes in the roles matrix cannot be detecte

Answer: A

Explanation:

Monitoring processes are also required to guarantee fulfillment of laws and regulations of the organization and, therefore, the information security manager will be obligated to comply with the law. Choices B and C are evaluated as part of the operational risk. Choice D is unlikely to be as critical a breach of regulatory legislation. The acceptance of operational risks overrides choices B, C and D.

NEW QUESTION 135
The MOST appropriate role for senior management in supporting information security is the:

A. evaluation of vendors offering security product
B. assessment of risks to the organizatio
C. approval of policy statements and fundin
D. monitoring adherence to regulatory requirement

Answer: C

Explanation:

Since the members of senior management are ultimately responsible for information security, they are the ultimate decision makers in terms of governance and direction. They are responsible for approval of major policy statements and requests to fund the information security practice. Evaluation of vendors, assessment of risks and monitoring compliance with regulatory requirements are day-to-day responsibilities of the information security manager; in some organizations, business management is involved in these other activities, though their primary role is direction and governance.

NEW QUESTION 140
Which of the following requirements would have the lowest level of priority in information security?

A. Technical
B. Regulatory
C. Privacy
D. Business

Answer: A

Explanation:

Information security priorities may, at times, override technical specifications, which then must be rewritten to conform to minimum security standards. Regulatory and privacy requirements are government-mandated and, therefore, not subject to override. The needs of the business should always take precedence in deciding information security priorities.

NEW QUESTION 141
When developing an information security program, what is the MOST useful source of information for determining available resources?

A. Proficiency test
B. Job descriptions
C. Organization chart
D. Skills inventory

Answer: D

Explanation:

A skills inventory would help identify- the available resources, any gaps and the training requirements for developing resources. Proficiency testing is useful but only with regard to specific technical skills. Job descriptions would not be as useful since they may be out of date or not sufficiently detailed. An organization chart would not provide the details necessary to determine the resources required for this activity.

NEW QUESTION 142
Which of the following would be the MOST important goal of an information security governance program?

A. Review of internal control mechanisms
B. Effective involvement in business decision making
C. Total elimination of risk factors
D. Ensuring trust in data

Answer: D

Explanation:

The development of trust in the integrity of information among stakeholders should be the primary goal of information security governance. Review of internal control mechanisms relates more to auditing, while the total elimination of risk factors is not practical or possible. Proactive involvement in business decision making implies that security needs dictate business needs when, in fact, just the opposite is true. Involvement in decision making is important only to ensure business data integrity so that data can be trusted.

NEW QUESTION 145
The MOST useful way to describe the objectives in the information security strategy is through:

A. attributes and characteristics of the 'desired state."
B. overall control objectives of the security progra
C. mapping the IT systems to key business processe
D. calculation of annual loss expectation

Answer: A

Explanation:

Security strategy will typically cover a wide variety of issues, processes, technologies and outcomes that can best be described by a set of characteristics and attributes that are desired. Control objectives are developed after strategy and policy development. Mapping IT systems to key business processes does not address strategy issues. Calculation of annual loss expectations would not describe the objectives in the information security strategy.

NEW QUESTION 150
Which of the following characteristics is MOST important when looking at prospective candidates for the role of chief information security officer (CISO)?

A. Knowledge of information technology platforms, networks and development methodologies
B. Ability to understand and map organizational needs to security technologies
C. Knowledge of the regulatory environment and project management techniques
D. Ability to manage a diverse group of individuals and resources across an organization

Answer: B

Explanation:

Information security will be properly aligned with the goals of the business only with the ability to understand and map organizational needs to enable security technologies. All of the other choices are important but secondary to meeting business security needs.

NEW QUESTION 153
Which of the following situations must be corrected FIRST to ensure successful information security governance within an organization?

A. The information security department has difficulty filling vacancie
B. The chief information officer (CIO) approves security policy change
C. The information security oversight committee only meets quarterl
D. The data center manager has final signoff on all security project

Answer: D

Explanation:

A steering committee should be in place to approve all security projects. The fact that the data center manager has final signoff for all security projects indicates that a steering committee is not being used and that information security is relegated to a subordinate place in the organization. This would indicate a failure of information security governance. It is not inappropriate for an oversight or steering committee to meet quarterly. Similarly, it may be desirable to have the chief information officer (CIO) approve the security policy due to the size of the organization and frequency of updates. Difficulty in filling vacancies is not uncommon due to the shortage of good, qualified information security professionals.

NEW QUESTION 158
Who should drive the risk analysis for an organization?

A. Senior management
B. Security manager
C. Quality manager
D. Legal department

Answer: B

Explanation:

Although senior management should support and sponsor a risk analysis, the know-how and the management of the project will be with the security department. Quality management and the legal department will contribute to the project.

NEW QUESTION 163
Information security projects should be prioritized on the basis of:

A. time required for implementatio
B. impact on the organizatio
C. total cost for implementatio
D. mix of resources require

Answer: BExplanation:

Explanation:
Information security projects should be assessed on the basis of the positive impact that they will have on the organization. Time, cost and resource issues should be subordinate to this objective.

NEW QUESTION 164
Which of the following BEST describes an information security manager's role in a multidisciplinary team that will address a new regulatory requirement regarding operational risk?

A. Ensure that all IT risks are identified
B. Evaluate the impact of information security risks
C. Demonstrate that IT mitigating controls are in place
D. Suggest new IT controls to mitigate operational risk

Answer: B

Explanation:

The job of the information security officer on such a team is to assess the risks to the business operation. Choice A is incorrect because information security is not limited to IT issues. Choice C is incorrect because at the time a team is formed to assess risk, it is premature to assume that any demonstration of IT controls will mitigate business operations risk. Choice D is incorrect because it is premature at the time of the formation of the team to assume that any suggestion of new IT controls will mitigate business operational risk.

NEW QUESTION 166
An information security manager at a global organization that is subject to regulation by multiple governmental jurisdictions with differing requirements should:

A. bring all locations into conformity with the aggregate requirements of all governmental jurisdiction
B. establish baseline standards for all locations and add supplemental standards as require
C. bring all locations into conformity with a generally accepted set of industry best practice
D. establish a baseline standard incorporating those requirements that all jurisdictions have in commo

Answer: B

Explanation:

It is more efficient to establish a baseline standard and then develop additional standards for locations that must meet specific requirements. Seeking a lowest common denominator or just using industry best practices may cause certain locations to fail regulatory compliance. The opposite approach—forcing all locations to be in compliance with the regulations places an undue burden on those locations.

NEW QUESTION 170
The FIRST step to create an internal culture that focuses on information security is to:

A. implement stronger control
B. conduct periodic awareness trainin
C. actively monitor operation
D. gain the endorsement of executive managemen

Answer: D

Explanation:

Endorsement of executive management in the form of policies provides direction and awareness. The implementation of stronger controls may lead to circumvention. Awareness training is important, but must be based on policies. Actively monitoring operations will not affect culture at all levels.

NEW QUESTION 172
Which of the following authentication methods prevents authentication replay?

A. Password hash implementation
B. Challenge/response mechanism
C. Wired Equivalent Privacy (WEP) encryption usage
D. HTTP Basic Authentication

Answer: B

Explanation:

A challenge .response mechanism prevents replay attacks by sending a different random challenge in each authentication event. The response is linked to that challenge. Therefore, capturing the authentication handshake and replaying it through the network will not work. Using hashes by itself will not prevent a replay. A WEP key will not prevent sniffing (it just takes a few more minutes to break the WEP key if the attacker does not already have it) and therefore will not be able to prevent recording and replaying an authentication handshake. HTTP Basic Authentication is clear text and has no mechanisms to prevent replay.

NEW QUESTION 173
Acceptable risk is achieved when:

A. residual risk is minimize
B. transferred risk is minimize
C. control risk is minimize
D. inherent risk is minimize

Answer: A

Explanation:

Residual risk is the risk that remains after putting into place an effective risk management program; therefore, acceptable risk is achieved when this amount is minimized. Transferred risk is risk that has been assumed by a third party and may not necessarily be equal to the minimal form of residual risk. Control risk is the risk that controls may not prevent/detect an incident with a measure of control effectiveness. Inherent risk cannot be minimized.

NEW QUESTION 174
When performing a quantitative risk analysis, which of the following is MOST important to estimate the potential loss?

A. Evaluate productivity losses
B. Assess the impact of confidential data disclosure
C. Calculate the value of the information or asset
D. Measure the probability of occurrence of each threat

Answer: C

Explanation:

Calculating the value of the information or asset is the first step in a risk analysis process to determine the impact to the organization, which is the ultimate goal. Determining how much productivity could be lost and how much it would cost is a step in the estimation of potential risk process. Knowing the impact if confidential information is disclosed is also a step in the estimation of potential risk. Measuring the probability of occurrence for each threat identified is a step in performing a threat analysis and therefore a partial answer.

NEW QUESTION 175
To determine the selection of controls required to meet business objectives, an information
security manager should:

A. prioritize the use of role-based access control
B. focus on key control
C. restrict controls to only critical application
D. focus on automated control

Answer: B

Explanation:

Key controls primarily reduce risk and are most effective for the protection of information assets. The other choices could be examples of possible key controls.

NEW QUESTION 179
An organization has to comply with recently published industry regulatory requirements—compliance that potentially has high implementation costs. What should the information security manager do FIRST?

A. Implement a security committe
B. Perform a gap analysi
C. Implement compensating control
D. Demand immediate complianc

Answer: B

Explanation:

Since they are regulatory requirements, a gap analysis would be the first step to determine the level of compliance already in place. Implementing a security committee or compensating controls would not be the first step. Demanding immediate compliance would not assess the situation.

NEW QUESTION 184
The value of information assets is BEST determined by:

A. individual business manager
B. business systems analyst
C. information security managemen
D. industry averages benchmarkin

Answer: A

Explanation:

Individual business managers are in the best position to determine the value of information assets since they are most knowledgeable of the assets' impact on the business. Business systems developers and information security managers are not as knowledgeable regarding the impact on the business. Peer companies' industry averages do not necessarily provide detailed enough information nor are they as relevant to the unique aspects of the business.

NEW QUESTION 188
The BEST strategy for risk management is to:

A. achieve a balance between risk and organizational goal
B. reduce risk to an acceptable leve
C. ensure that policy development properly considers organizational risk
D. ensure that all unmitigated risks are accepted by managemen

Answer:

B

Explanation:

The best strategy for risk management is to reduce risk to an acceptable level, as this will take into account the organization's appetite for risk and the fact that it would not be practical to eliminate all risk. Achieving balance between risk and organizational goals is not always practical. Policy development must consider organizational risks as well as business objectives. It may be prudent to ensure that management understands and accepts risks that it is not willing to mitigate, but that is a practice and is not sufficient to l>e considered a strategy.

NEW QUESTION 189
The impact of losing frame relay network connectivity for 18-24 hours should be calculated using the:

A. hourly billing rate charged by the carrie
B. value of the data transmitted over the networ
C. aggregate compensation of all affected business user
D. financial losses incurred by affected business unit

Answer: D

Explanation:

The bottom line on calculating the impact of a loss is what its cost will be to the organization. The other choices are all factors that contribute to the overall monetary impact.

NEW QUESTION 194
When performing an information risk analysis, an information security manager should FIRST:

A. establish the ownership of asset
B. evaluate the risks to the asset
C. take an asset inventor
D. categorize the asset

Answer: C

Explanation:

Assets must be inventoried before any of the other choices can be performed.

NEW QUESTION 198
Ongoing tracking of remediation efforts to mitigate identified risks can BEST be accomplished through the use of which of the following?

A. Tree diagrams
B. Venn diagrams
C. Heat charts
D. Bar charts

Answer: C

Explanation:

Meat charts, sometimes referred to as stoplight charts, quickly and clearly show the current status of remediation efforts. Venn diagrams show the connection between sets; tree diagrams are useful for decision analysis; and bar charts show relative size.

NEW QUESTION 203
The systems administrator did not immediately notify the security officer about a malicious attack. An information security manager could prevent this situation by:

A. periodically testing the incident response plan
B. regularly testing the intrusion detection system (IDS).
C. establishing mandatory training of all personne
D. periodically reviewing incident response procedure

Answer: A

Explanation:

Security incident response plans should be tested to find any deficiencies and improve existing processes. Testing the intrusion detection system (IDS) is a good practice but would not have prevented this situation. All personnel need to go through formal training to ensure that they understand the process, tools and methodology involved in handling security incidents. However, testing of the actual plans is more effective in ensuring the process works as intended. Reviewing the response procedures is not enough; the security response plan needs to be tested on a regular basis.

NEW QUESTION 207
Which of the following types of information would the information security manager expect to have the LOWEST level of security protection in a large, multinational enterprise?

A. Strategic business plan
B. Upcoming financial results
C. Customer personal information

D. Previous financial results

Answer: D

Explanation:

Previous financial results are public; all of the other choices are private information and should only be accessed by authorized entities.

NEW QUESTION 212
Previously accepted risk should be:

A. re-assessed periodically since the risk can be escalated to an unacceptable level due to revised condition
B. accepted permanently since management has already spent resources (time and labor) to conclude that the risk level is acceptabl
C. avoided next time since risk avoidance provides the best protection to the compan
D. removed from the risk log once it is accepte

Answer: A

Explanation:

Acceptance of risk should be regularly reviewed to ensure that the rationale for the initial risk acceptance is still valid within the current business context. The rationale for initial risk acceptance may no longer be valid due to change(s) and. hence, risk cannot be accepted permanently. Risk is an inherent part of business and it is impractical and costly to eliminate all risk. Even risks that have been accepted should be monitored for changing conditions that could alter the original decision.

NEW QUESTION 215
The security responsibility of data custodians in an organization will include:

A. assuming overall protection of information asset
B. determining data classification level
C. implementing security controls in products they instal
D. ensuring security measures are consistent with polic

Answer: D

Explanation:

Security responsibilities of data custodians within an organization include ensuring that appropriate security measures are maintained and are consistent with organizational policy. Executive management holds overall responsibility for protection of the information assets. Data owners determine data classification levels for information assets so that appropriate levels of controls can be provided to meet the requirements relating to confidentiality, integrity and availability. Implementation of information security in products is the responsibility of the IT developers.

NEW QUESTION 216
Which would be one of the BEST metrics an information security manager can employ to effectively evaluate the results of a security program?

A. Number of controls implemented
B. Percent of control objectives accomplished
C. Percent of compliance with the security policy
D. Reduction in the number of reported security incidents

Answer: B

Explanation:

Control objectives are directly related to business objectives; therefore, they would be the best metrics. Number of controls implemented does not have a direct relationship with the results of a security program. Percentage of compliance with the security policy and reduction in the number of security incidents are not as broad as choice B.

NEW QUESTION 218
Which of the following is the PRIMARY prerequisite to implementing data classification within an organization?

A. Defining job roles
B. Performing a risk assessment
C. Identifying data owners
D. Establishing data retention policies

Answer: C

Explanation:

Identifying the data owners is the first step, and is essential to implementing data classification. Defining job roles is not relevant. Performing a risk assessment is important, but will require the participation of data owners (who must first be identified). Establishing data retention policies may occur after data have been classified.

NEW QUESTION 222
During which phase of development is it MOST appropriate to begin assessing the risk of a new application system?

A. Feasibility
B. Design
C. Development
D. Testing

Answer: A

Explanation:

Risk should be addressed as early in the development of a new application system as possible. In some cases, identified risks could be mitigated through design changes. If needed changes are not identified until design has already commenced, such changes become more expensive. For this reason, beginning risk assessment during the design, development or testing phases is not the best solution.

NEW QUESTION 227
A successful risk management program should lead to:

A. optimization of risk reduction efforts against cos
B. containment of losses to an annual budgeted amoun
C. identification and removal of all man-made threat
D. elimination or transference of all organizational risk

Answer: A

Explanation:

Successful risk management should lead to a breakeven point of risk reduction and cost. The other options listed are not achievable. Threats cannot be totally removed or transferred, while losses cannot be budgeted in advance with absolute certainty.

NEW QUESTION 230
A risk management program would be expected to:

A. remove all inherent ris
B. maintain residual risk at an acceptable leve
C. implement preventive controls for every threa
D. reduce control risk to zer

Answer: B

Explanation:

The object of risk management is to ensure that all residual risk is maintained at a level acceptable to the business; it is not intended to remove every identified risk or implement controls for every threat since this may not be cost-effective. Control risk, i.e., that a control may not be effective, is a component of the program but is unlikely to be reduced to zero.

NEW QUESTION 232
When the computer incident response team (CIRT) finds clear evidence that a hacker has penetrated the corporate network and modified customer information, an information security manager should FIRST notify:

A. the information security steering committe
B. customers who may be impacte
C. data owners who may be impacte
D. regulatory- agencies overseeing privac

Answer: C

Explanation:

The data owners should be notified first so they can take steps to determine the extent of the damage and coordinate a plan for corrective action with the computer incident response team. Other parties will be notified later as required by corporate policy and regulatory requirements.

NEW QUESTION 237
After obtaining commitment from senior management, which of the following should be completed NEXT when establishing an information security program?

A. Define security metrics
B. Conduct a risk assessment
C. Perform a gap analysis
D. Procure security tools

Answer: B

Explanation:

When establishing an information security program, conducting a risk assessment is key to identifying the needs of the organization and developing a security strategy. Defining security metrics, performing a gap analysis and procuring security tools are all subsequent considerations.

NEW QUESTION 241
Which of the following is the PRIMARY reason for implementing a risk management program?

A. Allows the organization to eliminate risk
B. Is a necessary part of management's due diligence
C. Satisfies audit and regulatory requirements
D. Assists in incrementing the return on investment (ROD

Answer: B

Explanation:

The key reason for performing risk management is that it is part of management's due diligence. The elimination of all risk is not possible. Satisfying audit and regulatory requirements is of secondary importance. A risk management program may or may not increase the return on investment (ROD.

NEW QUESTION 242
An organization has a process in place that involves the use of a vendor. A risk assessment was completed during the development of the process. A year after the implementation a monetary decision has been made to use a different vendor. What, if anything, should occur?

A. Nothing, since a risk assessment was completed during developmen
B. A vulnerability assessment should be conducte
C. A new risk assessment should be performe
D. The new vendor's SAS 70 type II report should be reviewe

Answer: C

Explanation:

The risk assessment process is continual and any changes to an established process should include a new- risk assessment. While a review of the SAS 70 report and a vulnerability assessment may be components of a risk assessment, neither would constitute sufficient due diligence on its own.

NEW QUESTION 247
In performing a risk assessment on the impact of losing a server, the value of the server should be calculated using the:

A. original cost to acquir
B. cost of the software store
C. annualized loss expectancy (ALE).
D. cost to obtain a replacemen

Answer: D

Explanation:

The value of the server should be based on its cost of replacement. The original cost may be significantly different from the current cost and, therefore, not as relevant. The value of the software is not at issue because it can be restored from backup media. The ALE for all risks related to the server does not represent the server's value.

NEW QUESTION 251
The recovery point objective (RPO) requires which of the following?

A. Disaster declaration
B. Before-image restoration
C. System restoration
D. After-image processing

Answer: B

Explanation:

The recovery point objective (RPO) is the point in the processing flow at which system recovery should occur. This is the predetermined state of the application processing and data used to restore the system and to continue the processing flow. Disaster declaration is independent of this processing checkpoint. Restoration of the system can occur at a later date, as does the return to normal, after-image processing.

NEW QUESTION 252
Which of the following measures would be MOST effective against insider threats to confidential information?

A. Role-based access control
B. Audit trail monitoring
C. Privacy policy
D. Defense-in-depth

Answer: A

Explanation:

Role-based access control provides access according to business needs; therefore, it reduces unnecessary- access rights and enforces accountability. Audit trail monitoring is a detective control, which is 'after the fact.' Privacy policy is not relevant to this risk. Defense-in-depth primarily focuses on external threats

NEW QUESTION 253
The MAIN reason why asset classification is important to a successful information security program is because classification determines:

A. the priority and extent of risk mitigation effort
B. the amount of insurance needed in case of los
C. the appropriate level of protection to the asse
D. how protection levels compare to peer organization

Answer: C

Explanation:

Protection should be proportional to the value of the asset. Classification is based upon the value of the asset to the organization. The amount of insurance needed in case of loss may not be applicable in each case. Peer organizations may have different classification schemes for their assets.

NEW QUESTION 255
Which of the following results from the risk assessment process would BEST assist risk management decision making?

A. Control risk
B. Inherent risk
C. Risk exposure
D. Residual risk

Answer: D

Explanation:

Residual risk provides management with sufficient information to decide to the level of risk that an organization is willing to accept. Control risk is the risk that a control may not succeed in preventing an undesirable event. Risk exposure is the likelihood of an undesirable event occurring. Inherent risk is an important factor to be considered during the risk assessment.

NEW QUESTION 260
It is important to classify and determine relative sensitivity of assets to ensure that:

A. cost of protection is in proportion to sensitivit
B. highly sensitive assets are protecte
C. cost of controls is minimize
D. countermeasures are proportional to ris

Answer: D

Explanation:

Classification of assets needs to be undertaken to determine sensitivity of assets in terms of risk to the business operation so that proportional countermeasures can be effectively implemented. While higher costs are allowable to protect sensitive assets, and it is always reasonable to minimize the costs of controls, it is most important that the controls and countermeasures are commensurate to the risk since this will justify the costs. Choice B is important but it is an incomplete answer because it does not factor in risk. Therefore, choice D is the most important.

NEW QUESTION 265
A risk analysis should:

A. include a benchmark of similar companies in its scop
B. assume an equal degree of protection for all asset
C. address the potential size and likelihood of los
D. give more weight to the likelihood v
E. the size of the los

Answer: C

Explanation:

A risk analysis should take into account the potential size and likelihood of a loss. It could include comparisons with a group of companies of similar size. It should not assume an equal degree of protection for all assets since assets may have different risk factors. The likelihood of the loss should not receive greater emphasis than the size of the loss; a risk analysis should always address both equally.

NEW QUESTION 268
The service level agreement (SLA) for an outsourced IT function does not reflect an
adequate level of protection. In this situation an information security manager should:

A. ensure the provider is made liable for losse
B. recommend not renewing the contract upon expiratio
C. recommend the immediate termination of the contrac
D. determine the current level of securit

Answer: D

Explanation:

It is important to ensure that adequate levels of protection are written into service level agreements (SLAs) and other outsourcing contracts. Information must be obtained from providers to determine how that outsource provider is securing information assets prior to making any recommendation or taking any action in order to support management decision making. Choice A is not acceptable in most situations and therefore not a good answer.

NEW QUESTION 271
Based on the information provided, which of the following situations presents the GREATEST information security risk for an organization with multiple, but small, domestic processing locations?

A. Systems operation procedures are not enforced
B. Change management procedures are poor
C. Systems development is outsourced
D. Systems capacity management is not performed

Answer: B

Explanation:

The lack of change management is a severe omission and will greatly increase information security risk. Since procedures are generally nonauthoritative, their lack of enforcement is not a primary concern. Systems that are developed by third-party vendors are becoming commonplace and do not represent an increase in security risk as much as poor change management. Poor capacity management may not necessarily represent a security risk.

NEW QUESTION 273
The criticality and sensitivity of information assets is determined on the basis of:

A. threat assessmen
B. vulnerability assessmen
C. resource dependency assessmen
D. impact assessmen

Answer: D

Explanation:

The criticality and sensitivity of information assets depends on the impact of the probability of the threats exploiting vulnerabilities in the asset, and takes into consideration the value of the assets and the impairment of the value. Threat assessment lists only the threats that the information asset is exposed to. It does not consider the value of the asset and impact of the threat on the value. Vulnerability assessment lists only the vulnerabilities inherent in the information asset that can attract threats. It does not consider the value of the asset and the impact of perceived threats on the value. Resource dependency assessment provides process needs but not impact.

NEW QUESTION 277
The valuation of IT assets should be performed by:

A. an IT security manage
B. an independent security consultan
C. the chief financial officer (CFO).
D. the information owne

Answer: D

Explanation:

Information asset owners are in the best position to evaluate the value added by the IT asset under review within a business process, thanks to their deep knowledge of the business processes and of the functional IT requirements. An IT security manager is an expert of the IT risk assessment methodology and IT asset valuation mechanisms. However, the manager could not have a deep understanding of all the business processes of the firm. An IT security subject matter expert will take part of the process to identify threats and vulnerabilities and will collaborate with the business information asset owner to define the risk profile of the asset. A chief financial officer (CFO) will have an overall costs picture but not detailed enough to evaluate the value of each IT asset.

NEW QUESTION 280
Which of the following would be of GREATEST importance to the security manager in determining whether to accept residual risk?

A. Historical cost of the asset
B. Acceptable level of potential business impacts
C. Cost versus benefit of additional mitigating controls
D. Annualized loss expectancy (ALE)

Answer: C

Explanation:

The security manager would be most concerned with whether residual risk would be reduced by a greater amount than the cost of adding additional controls. The other choices, although relevant, would not be as important.

NEW QUESTION 285
A security risk assessment exercise should be repeated at regular intervals because:

A. business threats are constantly changin
B. omissions in earlier assessments can be addresse
C. repetitive assessments allow various methodologie
D. they help raise awareness on security in the busines

Answer: A

Explanation:

As business objectives and methods change, the nature and relevance of threats change as well. Choice B does not, by itself, justify regular reassessment. Choice C is not necessarily true in all cases. Choice D is incorrect because there are better ways of raising security awareness than by performing a risk assessment.

NEW QUESTION 286
The MOST effective way to incorporate risk management practices into existing production systems is through:

A. policy developmen
B. change managemen
C. awareness trainin
D. regular monitorin

Answer: B

Explanation:

Change is a process in which new risks can be introduced into business processes and systems. For this reason, risk management should be an integral component of the change management process. Policy development, awareness training and regular monitoring, although all worthwhile activities, are not as effective as change management.

NEW QUESTION 290
Which of the following will BEST protect an organization from internal security attacks?

A. Static IP addressing
B. Internal address translation
C. Prospective employee background checks
D. Employee awareness certification program

Answer: C

Explanation:

Because past performance is a strong predictor of future performance, background checks of prospective employees best prevents attacks from originating within an organization. Static IP addressing does little to prevent an internal attack. Internal address translation using non-routable addresses is useful against external attacks but not against internal attacks. Employees who certify that they have read security policies are desirable, but this does not guarantee that the employees behave honestly.

NEW QUESTION 295
Because of its importance to the business, an organization wants to quickly implement a technical solution which deviates from the company's policies. An information security manager should:

A. conduct a risk assessment and allow or disallow based on the outcom
B. recommend a risk assessment and implementation only if the residual risks are accepte
C. recommend against implementation because it violates the company's policie
D. recommend revision of current polic

Answer: B

Explanation:

Whenever the company's policies cannot be followed, a risk assessment should be conducted to clarify the risks. It is then up to management to accept the risks or to mitigate them. Management determines the level of risk they are willing to take. Recommending revision of current policy should not be triggered by a single request.

NEW QUESTION 298
Which of the following groups would be in the BEST position to perform a risk analysis for a business?

A. External auditors
B. A peer group within a similar business
C. Process owners
D. A specialized management consultant

Answer: C

Explanation:

Process owners have the most in-depth knowledge of risks and compensating controls within their environment. External parties do not have that level of detailed knowledge on the inner workings of the business. Management consultants are expected to have the necessary skills in risk analysis techniques but are still less effective than a group with intimate knowledge of the business.

NEW QUESTION 299
A mission-critical system has been identified as having an administrative system account with attributes that prevent locking and change of privileges and name. Which would be the BEST approach to prevent successful brute forcing of the account?

A. Prevent the system from being accessed remotely
B. Create a strong random password

C. Ask for a vendor patch
D. Track usage of the account by audit trails

Answer: B

Explanation:

Creating a strong random password reduces the risk of a successful brute force attack by exponentially increasing the time required. Preventing the system from being accessed remotely is not always an option in mission-critical systems and still leaves local access risks. Vendor patches are not always available, tracking usage is a detective control and will not prevent an attack.

NEW QUESTION 302
The purpose of a corrective control is to:

A. reduce adverse event
B. indicate compromis
C. mitigate impac
D. ensure complianc

Answer: C

Explanation:

Corrective controls serve to reduce or mitigate impacts, such as providing recovery capabilities. Preventive controls reduce adverse events, such as firewalls. Compromise can be detected by detective controls, such as intrusion detection systems (IDSs). Compliance could be ensured by preventive controls, such as access controls.

NEW QUESTION 306
A risk assessment should be conducted:

A. once a year for each business process and subproces
B. every three to six months for critical business processe
C. by external parties to maintain objectivit
D. annually or whenever there is a significant chang

Answer: D

Explanation:

Risks are constantly changing. Choice D offers the best alternative because it takes into consideration a reasonable time frame and allows flexibility to address significant change. Conducting a risk assessment once a year is insufficient if important changes take place. Conducting a risk assessment every three-to-six months for critical processes may not be necessary, or it may not address important changes in a timely manner. It is not necessary for assessments to be performed by external parties.

NEW QUESTION 311
A risk management approach to information protection is:

A. managing risks to an acceptable level, commensurate with goals and objective
B. accepting the security posture provided by commercial security product
C. implementing a training program to educate individuals on information protection and risk
D. managing risk tools to ensure that they assess all information protection vulnerabilitie

Answer: A

Explanation:

Risk management is identifying all risks within an organization, establishing an acceptable level of risk and effectively managing risks which may include mitigation or transfer. Accepting the security- posture provided by commercial security products is an approach that would be limited to technology components and may not address all business operations of the organization. Education is a part of the overall risk management process. Tools may be limited to technology and would not address non-technology risks.

NEW QUESTION 316
When implementing security controls, an information security manager must PRIMARILY focus on:

A. minimizing operational impact
B. eliminating all vulnerabilitie
C. usage by similar organization
D. certification from a third part

Answer: A

Explanation:

Security controls must be compatible with business needs. It is not feasible to eliminate all vulnerabilities. Usage by similar organizations does not guarantee that controls are adequate. Certification by a third party is important, but not a primary concern.

NEW QUESTION 317

When a significant security breach occurs, what should be reported FIRST to senior management?

A. A summary of the security logs that illustrates the sequence of events
B. An explanation of the incident and corrective action taken
C. An analysis of the impact of similar attacks at other organizations
D. A business case for implementing stronger logical access controls

Answer: B

Explanation:

When reporting an incident to senior management, the initial information to be communicated should include an explanation of what happened and how the breach was resolved. A summary of security logs would be too technical to report to senior management. An analysis of the impact of similar attacks and a business case for improving controls would be desirable; however, these would be communicated later in the process.

NEW QUESTION 319
Which of the following BEST indicates a successful risk management practice?

A. Overall risk is quantified
B. Inherent risk is eliminated
C. Residual risk is minimized
D. Control risk is tied to business units

Answer: C

Explanation:

A successful risk management practice minimizes the residual risk to the organization. Choice A is incorrect because the fact that overall risk has been quantified does not necessarily indicate the existence of a successful risk management practice. Choice B is incorrect since it is virtually impossible to eliminate inherent risk. Choice D is incorrect because, although the tying of control risks to business may improve accountability, this is not as desirable as minimizing residual risk.

NEW QUESTION 321
What is the BEST technique to determine which security controls to implement with a limited budget?

A. Risk analysis
B. Annualized loss expectancy (ALE) calculations
C. Cost-benefit analysis
D. Impact analysis

Answer: C

Explanation:

Cost-benefit analysis is performed to ensure that the cost of a safeguard does not outweigh it's benefit and that the best safeguard is provided for the cost of implementation. Risk analysis identifies the risks and suggests appropriate mitigation. The annualized loss expectancy (ALE) is a subset of a cost-benefit analysis. Impact analysis would indicate how
much could be lost if a specific threat occurred.

NEW QUESTION 323
The PRIMARY goal of a corporate risk management program is to ensure that an organization's:

A. IT assets in key business functions are protecte
B. business risks are addressed by preventive control
C. stated objectives are achievabl
D. IT facilities and systems are always availabl

Answer: C

Explanation:

Risk management's primary goal is to ensure an organization maintains the ability to achieve its objectives. Protecting IT assets is one possible goal as well as ensuring infrastructure and systems availability. However, these should be put in the perspective of achieving an organization's objectives. Preventive controls are not always possible or necessary; risk management will address issues with an appropriate mix of preventive and corrective controls.

NEW QUESTION 327
When performing a risk assessment, the MOST important consideration is that:

A. management supports risk mitigation effort
B. annual loss expectations (ALEs) have been calculated for critical asset
C. assets have been identified and appropriately value
D. attack motives, means and opportunities be understoo

Answer: C

Explanation:

Identification and valuation of assets provides the basis for risk management efforts as it relates to the criticality and sensitivity of assets. Management support is always important, but is not relevant when determining the proportionality of risk management efforts. ALE calculations are only valid if assets have first been

identified and appropriately valued. Motives, means and opportunities should already be factored in as a part of a risk assessment.

NEW QUESTION 332
Which of the following will BEST prevent external security attacks?

A. Static IP addressing
B. Network address translation
C. Background checks for temporary employees
D. Securing and analyzing system access logs

Answer: B

Explanation:

Network address translation is helpful by having internal addresses that are nonroutable. Background checks of temporary employees are more likely to prevent an attack launched from within the enterprise. Static IP addressing does little to prevent an attack. Writing all computer logs to removable media does not help in preventing an attack.

NEW QUESTION 337
Quantitative risk analysis is MOST appropriate when assessment data:

A. include customer perception
B. contain percentage estimate
C. do not contain specific detail
D. contain subjective informatio

Answer: B

Explanation:

Percentage estimates are characteristic of quantitative risk analysis. Customer perceptions, lack of specific details or subjective information lend themselves more to qualitative risk analysis.

NEW QUESTION 340
Which of the following risks would BEST be assessed using qualitative risk assessment techniques?

A. Theft of purchased software
B. Power outage lasting 24 hours
C. Permanent decline in customer confidence
D. Temporary loss of e-mail due to a virus attack

Answer: C

Explanation:

A permanent decline in customer confidence does not lend itself well to measurement by quantitative techniques. Qualitative techniques are more effective in evaluating things such as customer loyalty and goodwill. Theft of software, power outages and temporary loss of e-mail can be quantified into monetary amounts easier than can be assessed with quantitative techniques.

NEW QUESTION 345
A successful information security management program should use which of the following to determine the amount of resources devoted to mitigating exposures?

A. Risk analysis results
B. Audit report findings
C. Penetration test results
D. Amount of IT budget available

Answer: A

Explanation:

Risk analysis results are the most useful and complete source of information for determining the amount of resources to devote to mitigating exposures. Audit report findings may not address all risks and do not address annual loss frequency. Penetration test results provide only a limited view of exposures, while the IT budget is not tied to the exposures faced by the organization.

NEW QUESTION 348
An organization has decided to implement additional security controls to treat the risks of a new process. This is an example of:

A. eliminating the ris
B. transferring the ris
C. mitigating the ris
D. accepting the ris

Answer: C

Explanation:

Risk can never be eliminated entirely. Transferring the risk gives it away such as buying insurance so the insurance company can take the risk. Implementing additional controls is an example of mitigating risk. Doing nothing to mitigate the risk would be an example of accepting risk.

NEW QUESTION 350
The PRIMARY reason for assigning classes of sensitivity and criticality to information resources is to provide a basis for:

A. determining the scope for inclusion in an information security progra
B. defining the level of access control
C. justifying costs for information resource
D. determining the overall budget of an information security progra

Answer: B

Explanation:

The assigned class of sensitivity and criticality of the information resource determines the level of access controls to be put in place. The assignment of sensitivity and criticality takes place with the information assets that have already been included in the information security program and has only an indirect bearing on the costs to be incurred. The assignment of sensitivity and criticality contributes to, but does not decide, the overall budget of the information security program.

NEW QUESTION 354
The decision on whether new risks should fall under periodic or event-driven reporting
should be based on which of the following?

A. Mitigating controls
B. Visibility of impact
C. Likelihood of occurrence
D. Incident frequency

Answer: B

Explanation:

Visibility of impact is the best measure since it manages risks to an organization in the timeliest manner. Likelihood of occurrence and incident frequency are not as relevant. Mitigating controls is not a determining factor on incident reporting.

NEW QUESTION 359
Which of the following would be the FIRST step in establishing an information security program?

A. Develop the security polic
B. Develop security operating procedure
C. Develop the security pla
D. Conduct a security controls stud

Answer: C

Explanation:

A security plan must be developed to implement the security strategy. All of the other choices should follow the development of the security plan.

NEW QUESTION 362
Which of the following is the MOST effective solution for preventing internal users from modifying sensitive and classified information?

A. Baseline security standards
B. System access violation logs
C. Role-based access controls
D. Exit routines

Answer: C

Explanation:

Role-based access controls help ensure that users only have access to files and systems appropriate for their job role. Violation logs are detective and do not prevent unauthorized access. Baseline security standards do not prevent unauthorized access. Exit routines are dependent upon appropriate role-based access.

NEW QUESTION 367
Which of the following would be the BEST metric for the IT risk management process?

A. Number of risk management action plans
B. Percentage of critical assets with budgeted remedial
C. Percentage of unresolved risk exposures
D. Number of security incidents identified

Answer: B

Explanation:

Percentage of unresolved risk exposures and the number of security incidents identified contribute to the IT risk management process, but the percentage of

critical assets with budgeted remedial is the most indicative metric. Number of risk management action plans is not useful for assessing the quality of the process.

NEW QUESTION 368
Who can BEST advocate the development of and ensure the success of an information security program?

A. Internal auditor
B. Chief operating officer (COO)
C. Steering committee
D. IT management

Answer: C

Explanation:

Senior management represented in the security steering committee is in the best position to advocate the establishment of and continued support for an information security program. The chief operating officer (COO) will be a member of that committee. An internal auditor is a good advocate but is secondary to the influence of senior management. IT management has a lesser degree of influence and would also be part of the steering committee.

NEW QUESTION 369
For virtual private network (VPN) access to the corporate network, the information security manager is requiring strong authentication. Which of the following is the strongest method
to ensure that logging onto the network is secure?

A. Biometrics
B. Symmetric encryption keys
C. Secure Sockets Layer (SSL)-based authentication
D. Two-factor authentication

Answer: D

Explanation:

Two-factor authentication requires more than one type of user authentication. While biometrics provides unique authentication, it is not strong by itself, unless a PIN or some other authentication factor is used with it. Biometric authentication by itself is also subject to replay attacks. A symmetric encryption method that uses the same secret key to encrypt and decrypt data is not a typical authentication mechanism for end users. This private key could still be compromised. SSL is the standard security technology for establishing an encrypted link between a web server and a browser. SSL is not an authentication mechanism. If SSL is used with a client certificate and a password, it would be a two-factor authentication.

NEW QUESTION 372
Which of the following is the BEST metric for evaluating the effectiveness of security awareness twining? The number of:

A. password reset
B. reported incident
C. incidents resolve
D. access rule violation

Answer: B

Explanation:

Reported incidents will provide an indicator of the awareness level of staff. An increase in reported incidents could indicate that the staff is paying more attention to security. Password resets and access rule violations may or may not have anything to do with awareness levels. The number of incidents resolved may not correlate to staff awareness.

NEW QUESTION 373
The BEST protocol to ensure confidentiality of transmissions in a business-to-customer (B2C) financial web application is:

A. Secure Sockets Layer (SSL).
B. Secure Shell (SSH).
C. IP Security (IPSec).
D. Secure/Multipurpose Internet Mail Extensions (S/MIME).

Answer: A

Explanation:

Secure Sockets Layer (SSL) is a cryptographic protocol that provides secure communications providing end point authentication and communications privacy over the Internet. In typical use, all data transmitted between the customer and the business are, therefore, encrypted by the business's web server and remain confidential. SSH File Transfer Protocol (SFTP) is a network protocol that provides file transfer and manipulation functionality over any reliable data stream. It is typically used with the SSH-2 protocol to provide secure file transfer. IP Security (IPSec) is a standardized framework for securing Internet Protocol (IP) communications by encrypting and/or authenticating each IP packet in a data stream. There are two modes of IPSec operation: transport mode and tunnel mode. Secure/Multipurpose Internet Mail Extensions (S/MIME) is a standard for public key encryption and signing of e-mail encapsulated in MIME; it is not a web transaction protocol.

NEW QUESTION 376
When configuring a biometric access control system that protects a high-security data center, the system's sensitivity level should be set:

A. to u higher false reject rate (FRR).

B. to a lower crossover error rat
C. to a higher false acceptance rate (FAR).
D. exactly to the crossover error rat

Answer: A

Explanation:

Biometric access control systems are not infallible. When tuning the solution, one has to adjust the sensitivity level to give preference either to false reject rate (type I error rate) where the system will be more prone to err denying access to a valid user or erring and allowing access to an invalid user. As the sensitivity of the biometric system is adjusted, these values change inversely. At one point, the two values intersect and are equal. This condition creates the crossover error rate, which is a measure of the system accuracy. In systems where the possibility of false rejects is a problem, it may be necessary' to reduce sensitivity and thereby increase the number of false accepts. This is sometimes referred to as equal error rate (EER). In a very sensitive system, it may be desirable to minimize the number of false accepts—the number of unauthorized persons allowed access. To do this, the system is tuned to be more sensitive, which causes the false rejects the number of authorized persons disallowed access to increase.

NEW QUESTION 381
Primary direction on the impact of compliance with new regulatory requirements that may lead to major application system changes should be obtained from the:

A. corporate internal audito
B. System developers/analyst
C. key business process owner
D. corporate legal counse

Answer: C

Explanation:

Business process owners are in the best position to understand how new regulatory requirements may affect their systems. Legal counsel and infrastructure management, as well as internal auditors, would not be in as good a position to fully understand all ramifications.

NEW QUESTION 383
Who can BEST approve plans to implement an information security governance framework?

A. Internal auditor
B. Information security management
C. Steering committee
D. Infrastructure management

Answer: C

Explanation:

Senior management that is part of the security steering committee is in the best position to approve plans to implement an information security governance framework. An internal auditor is secondary' to the authority and influence of senior management. Information security management should not have the authority to approve the security governance framework. Infrastructure management will not be in the best position since it focuses more on the technologies than on the business.

NEW QUESTION 388
An outsource service provider must handle sensitive customer information. Which of the following is MOST important for an information security manager to know?

A. Security in storage and transmission of sensitive data
B. Provider's level of compliance with industry standards
C. Security technologies in place at the facility
D. Results of the latest independent security review

Answer: A

Explanation:

Mow the outsourcer protects the storage and transmission of sensitive information will allow an information security manager to understand how sensitive data will be protected. Choice B is an important but secondary consideration. Choice C is incorrect because security technologies are not the only components to protect the sensitive customer information. Choice D is incorrect because an independent security review may not include analysis on how sensitive customer information would be protected.

NEW QUESTION 390
A digital signature using a public key infrastructure (PKI) will:

A. not ensure the integrity of a messag
B. rely on the extent to which the certificate authority (CA) is truste
C. require two parties to the message exchang
D. provide a high level of confidentialit

Answer: B

Explanation:

The certificate authority (CA) is a trusted third party that attests to the identity of the

signatory, and reliance will be a function of the level of trust afforded the CA. A digital signature would provide a level of assurance of message integrity, but it is a three-party exchange, including the CA. Digital signatures do not require encryption of the message in order to preserve confidentiality.

NEW QUESTION 393
An internal review of a web-based application system finds the ability to gain access to all employees' accounts by changing the employee's ID on the URL used for accessing the account. The vulnerability identified is:

A. broken authenticatio
B. unvalidated inpu
C. cross-site scriptin
D. structured query language (SQL) injectio

Answer: A

Explanation:

The authentication process is broken because, although the session is valid, the application should reauthenticate when the input parameters are changed. The review provided valid employee IDs, and valid input was processed. The problem here is the lack of reauthentication when the input parameters are changed. Cross-site scripting is not the problem in this case since the attack is not transferred to any other user's browser to obtain the output. Structured query language (SQL) injection is not a problem since input is provided as a valid employee ID and no SQL queries are injected to provide the output.

NEW QUESTION 395
Which of the following practices completely prevents a man-in-the-middle (MitM) attack between two hosts?

A. Use security tokens for authentication
B. Connect through an IPSec VPN
C. Use https with a server-side certificate
D. Enforce static media access control (MAC) addresses

Answer: B

Explanation:

IPSec effectively prevents man-in-the-middle (MitM) attacks by including source and destination IPs within the encrypted portion of the packet. The protocol is resilient to MitM attacks. Using token-based authentication does not prevent a MitM attack; however, it may help eliminate reusability of stolen cleartext credentials. An https session can be intercepted through Domain Name Server (DNS) or Address Resolution Protocol (ARP) poisoning. ARP poisoning—a specific kind of MitM attack—may be prevented by setting static media access control (MAC) addresses. Nevertheless, DNS and NetBIOS resolution can still be attacked to deviate traffic.

NEW QUESTION 400
The MOST effective way to ensure that outsourced service providers comply with the organization's information security policy would be:

A. service level monitorin
B. penetration testin
C. periodically auditin
D. security awareness trainin

Answer: C

Explanation:

Regular audit exercise can spot any gap in the information security compliance. Service level monitoring can only pinpoint operational issues in the organization's operational environment. Penetration testing can identify security vulnerability but cannot ensure information compliance Training can increase users' awareness on the information security policy, but is not more effective than auditing.

NEW QUESTION 405
Which of the following is the MOST relevant metric to include in an information security quarterly report to the executive committee?

A. Security compliant servers trend report
B. Percentage of security compliant servers
C. Number of security patches applied
D. Security patches applied trend report

Answer: A

Explanation:

The percentage of compliant servers will be a relevant indicator of the risk exposure of the infrastructure. However, the percentage is less relevant than the overall trend, which would provide a measurement of the efficiency of the IT security program. The number of patches applied would be less relevant, as this would depend on the number of vulnerabilities identified and patches provided by vendors.

NEW QUESTION 407
At what stage of the applications development process would encryption key management initially be addressed?

A. Requirements development
B. Deployment
C. Systems testing
D. Code reviews

Answer: A

Explanation:

Encryption key management has to be integrated into the requirements of the application's design. During systems testing and deployment would be too late since the requirements have already been agreed upon. Code reviews are part of the final quality assurance (QA) process and would also be too late in the process.

NEW QUESTION 408
Which of the following is the MOST important consideration when implementing an intrusion detection system (IDS)?

A. Tuning
B. Patching
C. Encryption
D. Packet filtering

Answer: A

Explanation:

If an intrusion detection system (IDS) is not properly tuned it will generate an unacceptable number of false positives and/or fail to sound an alarm when an actual attack is underway. Patching is more related to operating system hardening, while encryption and packet filtering would not be as relevant.

NEW QUESTION 411
Which of the following is generally used to ensure that information transmitted over the Internet is authentic and actually transmitted by the named sender?

A. Biometric authentication
B. Embedded steganographic
C. Two-factor authentication
D. Embedded digital signature

Answer: D

Explanation:

Digital signatures ensure that transmitted information can be attributed to the named sender; this provides nonrepudation. Steganographic techniques are used to hide messages or data within other files. Biometric and two-factor authentication is not generally used to protect internet data transmissions.

NEW QUESTION 412
Which of the following BEST ensures that modifications made to in-house developed business applications do not introduce new security exposures?

A. Stress testing
B. Patch management
C. Change management
D. Security baselines

Answer: C

Explanation:

Change management controls the process of introducing changes to systems to ensure that unintended changes are not introduced. Patch management involves the correction of software weaknesses and helps ensure that newly identified exploits are mitigated in a timely fashion. Security baselines provide minimum recommended settings. Stress testing ensures that there are no scalability problems.

NEW QUESTION 415
An organization has adopted a practice of regular staff rotation to minimize the risk of fraud and encourage crosstraining. Which type of authorization policy would BEST address this practice?

A. Multilevel
B. Role-based
C. Discretionary
D. Attribute-based

Answer: B

Explanation:

A role-based policy will associate data access with the role performed by an individual, thus restricting access to data required to perform the individual's tasks. Multilevel policies are based on classifications and clearances. Discretionary policies leave access decisions up to information resource managers.

NEW QUESTION 417
Security monitoring mechanisms should PRIMARILY:

A. focus on business-critical informatio
B. assist owners to manage control risk
C. focus on detecting network intrusion
D. record all security violation

Answer: A

Explanation:

Security monitoring must focus on business-critical information to remain effectively usable by and credible to business users. Control risk is the possibility that controls would not detect an incident or error condition, and therefore is not a correct answer because monitoring would not directly assist in managing this risk. Network intrusions are not the only focus of monitoring mechanisms; although they should record all security violations, this is not the primary objective.

NEW QUESTION 419
When speaking to an organization's human resources department about information security, an information security manager should focus on the need for:

A. an adequate budget for the security progra
B. recruitment of technical IT employee
C. periodic risk assessment
D. security awareness training for employee

Answer: D

Explanation:

An information security manager has to impress upon the human resources department the need for security awareness training for all employees. Budget considerations are more of an accounting function. The human resources department would become involved once they are convinced for the need of security awareness training. Recruiting IT-savvy staff may bring in new employees with better awareness of information security, but that is not a replacement for the training requirements of the other employees. Periodic risk assessments may or may not involve the human resources department function.

NEW QUESTION 423
Which of the following is the MOST important reason why information security objectives should be defined?

A. Tool for measuring effectiveness
B. General understanding of goals
C. Consistency with applicable standards
D. Management sign-off and support initiatives

Answer: A

Explanation:

The creation of objectives can be used in part as a source of measurement of the effectiveness of information security management, which feeds into the overall governance. General understanding of goals and consistency with applicable standards are useful, but are not the primary reasons for having clearly defined objectives. Gaining management understanding is important, but by itself will not provide the structure for governance.

NEW QUESTION 424
An organization without any formal information security program that has decided to implement information security best practices should FIRST:

A. invite an external consultant to create the security strateg
B. allocate budget based on best practice
C. benchmark similar organization
D. define high-level business security requirement

Answer: D

Explanation:

All four options are valid steps in the process of implementing information security best practices; however, defining high-level business security requirements should precede the others because the implementation should be based on those security requirements.

NEW QUESTION 425
Which of the following would BEST protect an organization's confidential data stored on a laptop computer from unauthorized access?

A. Strong authentication by password
B. Encrypted hard drives
C. Multifactor authentication procedures
D. Network-based data backup

Answer: B

Explanation:

Encryption of the hard disks will prevent unauthorized access to the laptop even when the laptop is lost or stolen. Strong authentication by password can be bypassed by a
determined hacker. Multifactor authentication can be bypassed by removal of the hard drive and insertion into another laptop. Network- based data backups do not prevent access but rather recovery from data loss.

NEW QUESTION 427
Which of the following ensures that newly identified security weaknesses in an operating system are mitigated in a timely fashion?

A. Patch management

B. Change management
C. Security baselines
D. Acquisition management

Answer: A

Explanation:

Patch management involves the correction of software weaknesses and helps ensure that newly identified exploits are mitigated in a timely fashion. Change management controls the process of introducing changes to systems. Security baselines provide minimum recommended settings. Acquisition management controls the purchasing process.

NEW QUESTION 431
Which of the following, using public key cryptography, ensures authentication, confidentiality and nonrepudiation of a message?

A. Encrypting first by receiver's private key and second by sender's public key
B. Encrypting first by sender's private key and second by receiver's public key
C. Encrypting first by sender's private key and second decrypting by sender's public key
D. Encrypting first by sender's public key and second by receiver's private key

Answer: B

Explanation:

Encrypting by the sender's private key ensures authentication. By being able to decrypt with the sender's public key, the receiver would know that the message is sent by the sender only and the sender cannot deny/repudiate the message. By encrypting with the sender's public key secondly, only the sender will be able to decrypt the message and confidentiality is assured. The receiver's private key is private to the receiver and the sender cannot have it for encryption. Similarly, the receiver will not have the private key of the sender to decrypt the second-level encryption. In the case of encrypting first by the sender's private key and. second, decrypting by the sender's public key, confidentiality is not ensured since the message can be decrypted by anyone using the sender's public key. The receiver's private key would not be available to the sender for second-level encryption. Similarly, the sender's private key would not be available to the receiver for decrypting the message.

NEW QUESTION 434
When application-level security controlled by business process owners is found to be poorly managed, which of the following could BEST improve current practices?

A. Centralizing security management
B. Implementing sanctions for noncompliance
C. Policy enforcement by IT management
D. Periodic compliance reviews

Answer: A

Explanation:

By centralizing security management, the organization can ensure that security standards are applied to all systems equally and in line with established policy. Sanctions for noncompliance would not be the best way to correct poor management practices caused by work overloads or insufficient knowledge of security practices. Enforcement of policies is not solely the responsibility of IT management. Periodic compliance reviews would not correct the problems, by themselves, although reports to management would trigger corrective action such as centralizing security management.

NEW QUESTION 439
Which of the following is the MOST important item to include when developing web hosting agreements with third-party providers?

A. Termination conditions
B. Liability limits
C. Service levels
D. Privacy restrictions

Answer: C

Explanation:

Service levels are key to holding third parties accountable for adequate delivery of services. This is more important than termination conditions, privacy restrictions or liability limitations.

NEW QUESTION 442
The main mail server of a financial institution has been compromised at the superuser level; the only way to ensure the system is secure would be to:

A. change the root password of the syste
B. implement multifactor authenticatio
C. rebuild the system from the original installation mediu
D. disconnect the mail server from the networ

Answer: C

Explanation:

Rebuilding the system from the original installation medium is the only way to ensure all security vulnerabilities and potential stealth malicious programs have been

destroyed. Changing the root password of the system does not ensure the integrity of the mail server. Implementing multifactor authentication is an aftermeasure and does not clear existing security threats. Disconnecting the mail server from the network is an initial step, but does not guarantee security.

NEW QUESTION 444
Which of the following is the MOST effective type of access control?

A. Centralized
B. Role-based
C. Decentralized
D. Discretionary

Answer: B

Explanation:

Role-based access control allows users to be grouped into job-related categories, which significantly cases the required administrative overhead. Discretionary access control would require a greater degree of administrative overhead. Decentralized access control generally requires a greater number of staff to administer, while centralized access control is an incomplete answer.

NEW QUESTION 446
The MOST important success factor to design an effective IT security awareness program is to:

A. customize the content to the target audienc
B. ensure senior management is represente
C. ensure that all the staff is traine
D. avoid technical content but give concrete example

Answer: A

Explanation:

Awareness training can only be effective if it is customized to the expectations and needs of attendees. Needs will be quite different depending on the target audience and will vary between business managers, end users and IT staff; program content and the level of detail communicated will therefore be different. Other criteria are also important; however, the customization of content is the most important factor.

NEW QUESTION 447
Which of the following would be the BEST defense against sniffing?

A. Password protect the files
B. Implement a dynamic IP address scheme
C. Encrypt the data being transmitted
D. Set static mandatory access control (MAC) addresses

Answer: C

Explanation:

Encrypting the data will obfuscate the data so that they are not visible in plain text. Someone would have to collate the entire data stream and try decrypting it, which is not easy. Passwords can be recovered by brute-force attacks and by password crackers, so this is not the best defense against sniffing. IP addresses can always be discovered, even if dynamic IP addresses are implemented. The person sniffing traffic can initiate multiple sessions for possible IP addresses. Setting static mandatory access control (MAC) addresses can prevent address resolution protocol (ARP) poisoning, but it does not prevent sniffing.

NEW QUESTION 449
The MOST important reason that statistical anomaly-based intrusion detection systems (slat IDSs) are less commonly used than signature-based IDSs, is that stat IDSs:

A. create more overhead than signature-based IDS
B. cause false positives from minor changes to system variable
C. generate false alarms from varying user or system action
D. cannot detect new types of attack

Answer: C

Explanation:

A statistical anomaly-based intrusion detection system (stat IDS) collects data from normal traffic and establishes a baseline. It then periodically samples the network activity based on statistical methods and compares samples to the baseline. When the activity is outside the baseline parameter (clipping level), the IDS notifies the administrator. The baseline variables can include a host's memory or central processing unit (CPU) usage, network packet types and packet quantities. If actions of the users or the systems on the network vary widely with periods of low activity and periods of frantic packet exchange, a stat IDS may not be suitable, as the dramatic swing from one level to another almost certainly will generate false alarms. This weakness will have the largest impact on the operation of the IT systems. Due to the nature of stat IDS operations (i.e., they must constantly attempt to match patterns of activity to the baseline parameters), a stat IDS requires much more overhead and processing than signature-based versions. Due to the nature of a stat IDS—based on statistics and comparing data with baseline parameters—this type of IDS may not detect minor changes to system variables and may generate many false positives. Choice D is incorrect; since the stat IDS can monitor multiple system variables, it can detect new types of variables by tracing for abnormal activity of any kind.

NEW QUESTION 454
What is the MOST important reason for conducting security awareness programs throughout an organization?

A. Reducing the human risk
B. Maintaining evidence of training records to ensure compliance
C. Informing business units about the security strategy
D. Training personnel in security incident response

Answer: A

Explanation:

People are the weakest link in security implementation, and awareness would reduce this risk. Through security awareness and training programs, individual employees can be informed and sensitized on various security policies and other security topics, thus ensuring compliance from each individual. Laws and regulations also aim to reduce human risk. Informing business units about the security strategy is best done through steering committee meetings or other forums.

NEW QUESTION 458
What is an appropriate frequency for updating operating system (OS) patches on production servers?

A. During scheduled rollouts of new applications
B. According to a fixed security patch management schedule
C. Concurrently with quarterly hardware maintenance
D. Whenever important security patches are released

Answer: D

Explanation:

Patches should be applied whenever important security updates are released. They should not be delayed to coincide with other scheduled rollouts or maintenance. Due to the possibility of creating a system outage, they should not be deployed during critical periods of application activity such as month-end or quarter-end closing.

NEW QUESTION 460
The information classification scheme should:

A. consider possible impact of a security breac
B. classify personal information in electronic for
C. be performed by the information security manage
D. classify systems according to the data processe

Answer: A

Explanation:

Data classification is determined by the business risk, i.e., the potential impact on the business of the loss, corruption or disclosure of information. It must be applied to information in all forms, both electronic and physical (paper), and should be applied by the data owner, not the security manager. Choice B is an incomplete answer because it addresses only privacy issues, while choice A is a more complete response. Systems are not classified per se, but the data they process and store should definitely be classified.

NEW QUESTION 464
The PRIMARY driver to obtain external resources to execute the information security program is that external resources can:

A. contribute cost-effective expertise not available internall
B. be made responsible for meeting the security program requirement
C. replace the dependence on internal resource
D. deliver more effectively on account of their knowledg

Answer: A

Explanation:

Choice A represents the primary driver for the information security manager to make use of external resources. The information security manager will continue to be responsible for meeting the security program requirements despite using the services of external resources. The external resources should never completely replace the role of internal resources from a strategic perspective. The external resources cannot have a better knowledge of the business of the information security manager's organization than do the internal resources.

NEW QUESTION 469
......

Thank You for Trying Our Product

We offer two products:

1st - We have Practice Tests Software with Actual Exam Questions

2nd - Questons and Answers in PDF Format

CISM Practice Exam Features:

* CISM Questions and Answers Updated Frequently

* CISM Practice Questions Verified by Expert Senior Certified Staff

* CISM Most Realistic Questions that Guarantee you a Pass on Your FirstTry

* CISM Practice Test Questions in Multiple Choice Formats and Updatesfor 1 Year

100% Actual & Verified — Instant Download, Please Click
Order The CISM Practice Test Here
