## Exam Questions MS-102

Microsoft 365 Administrator Exam

**NEW QUESTION 1**

HOTSPOT - (Topic 6)

You have a Microsoft 365 tenant that contains the compliance policies shown in the following table.

Name	Require BitLocker	Require the device to be at or under the machine risk score
Policy1	Required	High
Policy2	Not configured	Medium
Policy3	Required	Low

The tenant contains the devices shown in the following table.

Name	BitLocker Drive Encryption (BitLocker)	Microsoft Defender for Endpoint risk status	Policies applied
Device1	Configured	High	Policy1, Policy3
Device2	Not configured	Medium	Policy2, Policy3
Device3	Not configured	Low	Policy1, Policy2

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

**NEW QUESTION 2**

HOTSPOT - (Topic 6)

HOTSPOT

You have a Microsoft 365 subscription.

You need to review metrics for the following: The daily active users in Microsoft Teams Recent Microsoft service issues

What should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

## Answer Area

Teams daily active users:

Microsoft Secure Score

Adoption Score

Service health

Usage reports

Recent Microsoft service issues:

Microsoft Secure Score

Adoption Score

Service health

Usage reports

- A. Mastered  
 B. Not Mastered

**Answer:** A

### Explanation:

Box 1: Usage reports

The daily active users in Microsoft Teams

Microsoft 365 Reports in the admin center - Microsoft Teams usage activity

The brand-new Teams usage report gives you an overview of the usage activity in Teams, including the number of active users, channels and messages so you can quickly see how many users across your organization are using Teams to communicate and collaborate. It also includes other Teams specific activities, such as the number of active guests, meetings, and messages.

Box 2: Service Health

Recent Microsoft service issues

You can view the health of your Microsoft services, including Office on the web, Yammer, Microsoft Dynamics CRM, and mobile device management cloud services, on the Service health page in the Microsoft 365 admin center. If you are experiencing problems with a cloud service, you can check the service health to determine whether this is a known issue with a resolution in progress before you call support or spend time troubleshooting.

### NEW QUESTION 3

- (Topic 6)

You have a Microsoft 365 tenant that uses Microsoft Endpoint Manager for device management. You need to add the phone number of the help desk to the Company Portal app. What should you do?

- A. From Customization in the Microsoft Endpoint Manager admin center, modify the support information for the tenant.  
 B. From the Microsoft Endpoint Manager admin center, create an app configuration policy.  
 C. From the Microsoft 365 admin center, modify Organization information.  
 D. From the Microsoft 365 admin center, modify Help desk information.

**Answer:** A

### NEW QUESTION 4

HOTSPOT - (Topic 6)

HOTSPOT

Your network contains an on-premises Active Directory domain. The domain contains the servers shown in the following table.

Name	Operating system	Configuration
Server1	Windows Server 2022	Domain controller
Server2	Windows Server 2016	Member server
Server3	Server Core installation of Windows Server 2022	Member server

You purchase a Microsoft 365 E5 subscription.

You need to implement Azure AD Connect cloud sync.

What should you install first and on which server? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

## Answer Area

Install:

Server:

- A. Mastered
- B. Not Mastered

**Answer:** A

### Explanation:

Box 1: The Azure AD Connect provisioning agent Install the Azure AD Connect provisioning agent

How is Azure AD Connect cloud sync different from Azure AD Connect sync?

With Azure AD Connect cloud sync, provisioning from AD to Azure AD is orchestrated in Microsoft Online Services. An organization only needs to deploy, in their on-premises or IaaS-hosted environment, a light-weight agent that acts as a bridge between Azure AD and AD. The provisioning configuration is stored in Azure AD and managed as part of the service.

Box 2: Server1 or Server2 only.

Cloud provisioning agent requirements include:

\* An on-premises server for the provisioning agent with Windows 2016 or later.

This server should be a tier 0 server based on the Active Directory administrative tier model. Installing the agent on a domain controller is supported.

Note: Windows Server Core is a minimal installation option for the Windows Server operating system (OS) that has no GUI and only includes the components required to perform server roles and run applications.

### NEW QUESTION 5

- (Topic 6)

You have a Microsoft 365 E5 subscription that contains a user named User1.

User1 exceeds the default daily limit of allowed email messages and is on the Restricted entities list.

You need to remove User1 from the Restricted entities list. What should you use?

- A. the Exchange admin center
- B. the Microsoft Purview compliance portal
- C. the Microsoft 365 admin center
- D. the Microsoft 365 Defender portal
- E. the Microsoft Entra admin center

**Answer:** D

### Explanation:

Admins can remove user accounts from the Restricted entities page in the Microsoft 365 Defender portal or in Exchange Online PowerShell.

Remove a user from the Restricted entities page in the Microsoft 365 Defender portal In the Microsoft 365 Defender portal at <https://security.microsoft.com>, go to Email & collaboration > Review > Restricted entities. Or, to go directly to the Restricted entities page, use <https://security.microsoft.com/restrictedentities>.

### NEW QUESTION 6

- (Topic 6)

You have a Microsoft 365 tenant.

You plan to implement device configuration profiles in Microsoft Intune. Which platform can you manage by using the profiles?

- A. Ubuntu Linux
- B. macOS
- C. Android Enterprise
- D. Windows 8.1

**Answer:** D

### NEW QUESTION 7

- (Topic 6)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 E5 subscription.

You create an account for a new security administrator named SecAdmin1.

You need to ensure that SecAdmin1 can manage Microsoft Defender for Office 365 settings and policies for Microsoft Teams, SharePoint, and OneDrive.

Solution: From the Microsoft 365 admin center, you assign SecAdmin1 the Exchange admin role.

Does this meet the goal?

A. Yes

B. No

**Answer: B**

**Explanation:**

You need to assign the Security Administrator role. Reference:

**NEW QUESTION 8**

- (Topic 6)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 E5 subscription that contains a user named User1. You need to enable User1 to create Compliance Manager assessments.

Solution: From the Microsoft 365 admin center, you assign User1 the Compliance data admin role.

Does this meet the goal?

A. Yes

B. No

**Answer: B**

**Explanation:**

Reference:

**NEW QUESTION 9**

- (Topic 6)

You have a Microsoft 365 subscription.

You register two applications named App1 and App2 to Azure AD.

You need to ensure that users who connect to App1 require multi-factor authentication (MFA). MFA is required only for App1. What should you do?

A. From the Microsoft Entra admin center, create a conditional access policy

B. From the Microsoft 365 admin center, configure the Modern authentication settings.

C. From the Enterprise applications blade of the Microsoft Entra admin center, configure the Users settings.

D. From Multi-Factor Authentication, configure the service settings.

**Answer: A**

**Explanation:**

Use Conditional Access policies

If your organization has more granular sign-in security needs, Conditional Access policies can offer you more control. Conditional Access lets you create and define policies that react to sign in events and request additional actions before a user is granted access to an application or service.

**NEW QUESTION 10**

- (Topic 6)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others

might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an on-premises Active Directory domain. The domain contains domain controllers that run Windows Server 2019. The functional level of the forest and the domain is Windows Server 2012 R2.

The domain contains 100 computers that run Windows 10 and a member server named Server1 that runs Windows Server 2012 R2.

You plan to use Server1 to manage the domain and to configure Windows 10 Group Policy settings.

You install the Group Policy Management Console (GPMC) on Server1.

You need to configure the Windows Update for Business Group Policy settings on Server1. Solution: You copy the Group Policy Administrative Templates from a Windows 10

computer to Server1. Does this meet the goal?

A. yes

B. No

**Answer: A**

**NEW QUESTION 10**

HOTSPOT - (Topic 6)

You have a Microsoft 365 E5 subscription.

You need to configure a group naming policy.

Which portal should you use, and to which types of groups will the policy apply? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer Area**

**NEW QUESTION 12**

- (Topic 6)

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the objects shown in the following table.

Name	Configuration
Group1	Global security group
User1	Enabled user account
User2	Disabled user account

You configure Azure AD Connect to sync contoso.com to Azure AD.  
 Which objects will sync to Azure AD?

- A. Group1 only
- B. User1 and User2 only
- C. Group1 and User1 only
- D. Group1, User1, and User2

**Answer:** D

**Explanation:**

Disabled accounts

Disabled accounts are synchronized as well to Azure AD. Disabled accounts are common to represent resources in Exchange, for example conference rooms. The exception is users with a linked mailbox; as previously mentioned, these will never provision an account to Azure AD. The assumption is that if a disabled user account is found, then we won't find another active account later and the object is provisioned to Azure AD with the userPrincipalName and sourceAnchor found. In case another active account will join to the same metaverse object, then its userPrincipalName and sourceAnchor will be used.

**NEW QUESTION 14**

HOTSPOT - (Topic 6)

You have an Azure AD tenant that contains the users shown in the following table.

Name	Member of
User1	Group1
User2	Group2
User3	Group3

Your company uses Microsoft Defender for Endpoint. Microsoft Defender for Endpoint contains the roles shown in the following table.

Name	Permission	Assigned user group
Microsoft Defender for Endpoint administrator (default)	View data, Alerts investigation, Active remediation actions, Manage security settings	Group3
Role1	View data, Alerts investigation	Group1
Role2	View data	Group2

Microsoft Defender for Endpoint contains the device groups shown in the following table.

Rank	Device group	Device name	User access
1	ATP1	Device1	Group1
Last	Ungrouped devices (default)	Device2	Group2

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NEW QUESTION 21

- (Topic 6)  
You have a Microsoft 365 E5 subscription.  
On Monday, you create a new user named User1.  
On Tuesday, User1 signs in for the first time and perform the following actions:

- Signs in to Microsoft Exchange Online from an anonymous IP address
- Signs in to Microsoft SharePoint Online from a device in New York City.
- Establishes Remote Desktop connections to hosts in Berlin and Hong Kong, and then signs in to SharePoint Online from the Remote Desktop connections

Which types of sign-in risks will Azure AD Identity Protection detect for User1?

- A. anonymous IP address only
- B. anonymous IP address and atypical travel
- C. anonymous IP address, atypical travel, and unfamiliar sign-in properties
- D. unfamiliar sign-in properties and atypical travel only
- E. anonymous IP address and unfamiliar sign-in properties only

NEW QUESTION 69

DRAG DROP - (Topic 6)

Your company has a Microsoft 365 E5 tenant.

Users access resources in the tenant by using both personal and company-owned Android devices. Company policies requires that the devices have a threat level of medium or lower to access Microsoft Exchange Online mailboxes.

You need to recommend a solution to identify the threat level of the devices and to control access of the devices to the resources.

What should you include in the solution for each device type? To answer, drag the appropriate components to the correct devices. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Answer:** C

### NEW QUESTION 81

- (Topic 6)

You have a Microsoft 365 subscription.

You view the Service health Overview as shown in the following exhibit.

Service	Status
Exchange Online	3 advisories
Microsoft 365 suite	2 advisories
Microsoft Teams	1 advisory
OneDrive for Business	1 advisory
SharePoint Online	2 advisories

You need to ensure that a user named User1 can view the advisories to investigate service health issues. Which role should you assign to User1?

- A. Message Center Reader
- B. Reports Reader
- C. Service Support Administrator
- D. Compliance Administrator

**Answer:** B

### Explanation:

Service Support admin

Assign the Service Support admin role as an additional role to admins or users who need to do the following in addition to their usual admin role:

- Open and manage service requests
- View and share message center posts
- Monitor service health

Incorrect:

\* Message center reader

Assign the Message center reader role to users who need to do the following:

- Monitor message center notifications
- Get weekly email digests of message center posts and updates
- Share message center posts
- Have read-only access to Azure AD services, such as users and groups

\* Reports reader

Assign the Reports reader role to users who need to do the following:

- View usage data and the activity reports in the Microsoft 365 admin center
- Get access to the Power BI adoption content pack
- Get access to sign-in reports and activity in Azure AD
- View data returned by Microsoft Graph reporting API

NEW QUESTION 91

- (Topic 6)  
 Your network contains three Active Directory forests. There are forests trust relationships between the forests. You create an Azure AD tenant. You plan to sync the on-premises Active Directory to Azure AD. You need to recommend a synchronization solution. The solution must ensure that the synchronization can complete successfully and as quickly as possible if a single server fails. What should you include in the recommendation?

- A. one Azure AD Connect sync server and one Azure AD Connect sync server in staging mode
- B. three Azure AD Connect sync servers and one Azure AD Connect sync server in staging mode
- C. six Azure AD Connect sync servers and three Azure AD Connect sync servers in staging mode
- D. three Azure AD Connect sync servers and three Azure AD Connect sync servers in staging mode

Answer: A

Explanation:

Azure AD Connect can be active on only one server. You can install Azure AD Connect on another server for redundancy but the additional installation would need to be in Staging mode. An Azure AD connect installation in Staging mode is configured and ready to go but it needs to be manually switched to Active to perform directory synchronization.

**NEW QUESTION 101**

- (Topic 6)  
You have a Microsoft 365 subscription.  
You need to configure a compliance solution that meets the following requirements: Defines sensitive data based on existing data samples  
Automatically prevents data that matches the samples from being shared externally in Microsoft SharePoint or email messages  
Which two components should you configure? Each correct answer presents part of the solution.  
NOTE: Each correct selection is worth one point.

- A. a trainable classifier
- B. a sensitive info type
- C. an insider risk policy
- D. an adaptive policy scope
- E. a data loss prevention (DLP) policy

Answer: AE

Explanation:

A: Classifiers  
This categorization method is well suited to content that isn't easily identified by either the manual or automated pattern-matching methods. This method of categorization is more about using a classifier to identify an item based on what the item is, not by elements that are in the item (pattern matching). A classifier learns how to identify a type of content by looking at hundreds of examples of the content you're interested in identifying.  
Where you can use classifiers  
Classifiers are available to use as a condition for: Office auto-labeling with sensitivity labels  
Auto-apply retention label policy based on a condition Communication compliance  
Sensitivity labels can use classifiers as conditions, see Apply a sensitivity label to content automatically.  
Data loss prevention  
E: Organizations have sensitive information under their control such as financial data, proprietary data, credit card numbers, health records, or social security numbers. To help protect this sensitive data and reduce risk, they need a way to prevent their users from inappropriately sharing it with people who shouldn't have it. This practice is called data loss prevention (DLP).

HOTSPOT - (Topic 6)

HOTSPOT

Your network contains an Active Directory domain named fabrikam.com. The domain contains the objects shown in the following table.

Name	Type	In organizational unit (OU)
User1	User	OU1
User2	User	OU1
Group1	Security Group - Global	OU1
User3	User	OU2
Group2	Security Group - Global	OU2

The groups have the members shown in the following table.

Group	Members
Group1	User1
Group2	User2, User3, Group1

You are configuring synchronization between fabrikam.com and an Azure AD tenant.  
 You configure the Domain/OU Filtering settings in Azure AD Connect as shown in the Domain/OU Filtering exhibit (Click the Domain/OU Filtering tab.)

You configure the Filtering settings in Azure AD Connect as shown in the Filtering exhibit. (Click the Filtering tab.)

For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
 NOTE: Each correct selection is worth one point.

**Answer Area**

Statements	Yes	No
User2 will synchronize to Azure AD.	<input checked="" type="radio"/>	<input type="radio"/>
Group2 will synchronize to Azure AD.	<input type="radio"/>	<input type="radio"/>
User3 will synchronize to Azure AD.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: No  
The filtering is configured to synchronize Group2 and OU2 only. The effect of this is that only members of Group2 who are in OU2 will be synchronized. User2 is in Group2. However, the User2 account object is in OU1 so User2 will not synchronize to Azure AD.

Box 2: Yes  
Group2 is in OU2 so Group2 will synchronize to Azure AD. However, only members of the group who are in OU2 will synchronize. Members of Group2 who are in OU1 will not synchronize.

Box 3: Yes  
User3 is in Group2 and in OU2. Therefore, User3 will synchronize to Azure AD.

NEW QUESTION 116

HOTSPOT - (Topic 6)  
HOTSPOT

You have a Microsoft 365 E5 subscription that uses Microsoft Defender for Endpoint and contains the devices shown in the following table.

Name	Operating system	Tag
Device1	Windows 10	Inventory1
Computer1	Windows 10	Inventory2
Device3	Android	Inventory3

Defender for Endpoint has the device groups shown in the following table.

Rank	Name	Matching rule
1	Group1	Tag Contains Inventory And OS in Android
2	Group2	Name Starts with Device And Tag Contains Inventory
Last	Ungrouped devices (default)	Not applicable

You create an incident email notification rule configured as shown in the following table.

Setting	Value
Name	Rule1
Alert severity	Low
Device group scope	Group1, Group2
Recipient email address	User1@contoso.com

For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
If a high-severity incident is triggered for Device1, an incident email notification will be sent.	<input checked="" type="radio"/>	<input type="radio"/>
If a low-severity incident is triggered for Computer1, an incident notification email will be sent.	<input type="radio"/>	<input type="radio"/>
If a low-severity incident is triggered for Device3, an incident notification email will be sent.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: No  
Device1 is in Group2 as Name starts with Device and Tag contains Inventory. However, the Group2 has alert severity low.

Box 2: No  
Computer1 does not belong to either Group1 or Group2

Box 3: Yes  
Device3 belongs to both Group1 and Group2.

Note: Understanding alert severity  
Microsoft Defender Antivirus and Defender for Endpoint alert severities are different because they represent different scopes. The Microsoft Defender Antivirus threat severity represents the absolute severity of the detected threat (malware), and is assigned based on the potential risk to the individual device, if infected.

#### NEW QUESTION 123

- (Topic 6)

Your company has on-premises servers and an Azure AD tenant.

Several months ago, the Azure AD Connect Health agent was installed on all the servers. You review the health status of all the servers regularly.

Recently, you attempted to view the health status of a server named Server1 and discovered that the server is NOT listed on the Azure AD Connect Servers list.

You suspect that another administrator removed Server1 from the list. You need to ensure that you can view the health status of Server1.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. From Azure Cloud shell, run the Connect-Azure AD cmdlet.
- B. From Server1, change the Azure AD Connect Health Services Startup type to Automatic (Delayed Start)
- C. From Server1, change the Azure AD Connect Health Services Startup type to Automatic
- D. From Windows PowerShell, run the Register-AzureADConnectHealthsyncAgent cmdlet.
- E. From Server1, reinstall the Azure AD Connect Health agent

Name	Role
User1	Exchange Administrator
User2	User Administrator
User3	Global Administrator
User4	None

You add another user named User5 to the User Administrator role. You need to identify which two management tasks User5 can perform.

Which two tasks should you identify? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Delete User2 and User4 only.
- B. Reset the password of User4 only
- C. Reset the password of any user in Azure AD.
- D. Delete User1, User2, and User4 only.
- E. Reset the password of User2 and User4 only.
- F. Delete any user in Azure AD.

Answer: AE

You need to prevent the users from bypassing the DLP policy. What should you configure?

- A. actions
- B. incident reports
- C. exceptions
- D. user overrides

**Answer:** D

#### Explanation:

A DLP policy can be configured to allow users to override a policy tip and report a false positive.

You can educate your users about DLP policies and help them remain compliant without blocking their work. For example, if a user tries to share a document containing sensitive information, a DLP policy can both send them an email notification and show them a policy tip in the context of the document library that allows them to override the policy if they have a business justification. The same policy tips also appear in Outlook on the web, Outlook, Excel, PowerPoint, and Word.

If you find that users are incorrectly marking content as false positive and bypassing the DLP policy, you can configure the policy to not allow user overrides.

**NEW QUESTION 170**

- (Topic 6)

You have a Microsoft 365 subscription.

You plan to implement Microsoft Purview Privileged Access Management. Which Microsoft Office 365 workloads support privileged access?

- A. Microsoft Exchange Online only
- B. Microsoft Teams only
- C. Microsoft Exchange Online and SharePoint Online only
- D. Microsoft Teams and SharePoint Online only
- E. Microsoft Teams, Exchange Online, and SharePoint Online

**Answer:** A

**Explanation:**

Privileged access management

Having standing access by some users to sensitive information or critical network configuration settings in Microsoft Exchange Online is a potential pathway for compromised accounts or internal threat activities. Microsoft Purview Privileged Access Management helps protect your organization from breaches and helps to meet compliance best practices by limiting standing access to sensitive data or access to critical configuration settings. Instead of administrators having constant access, just-in-time access rules are implemented for tasks that need elevated permissions. Enabling privileged access management for Exchange Online in Microsoft 365 allows your organization to operate with zero standing privileges and provide a layer of defense against standing administrative access vulnerabilities.

Note: When will privileged access support Office 365 workloads beyond Exchange? Privileged access management will be available in other Office 365 workloads soon.

User1 can access Site1 from Device1.	<input type="radio"/>	<input type="radio"/>
User2 can access Site1 from Device2.	<input type="radio"/>	<input type="radio"/>
User2 can access Site1 from Device3.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: No  
User1 is member of Group1 and has Device1.  
Device1 is not Azure AD joined.  
Note: Requiring a hybrid Azure AD joined device is dependent on your devices already being hybrid Azure AD joined.  
Box 2: Yes  
User2 is member of Group1 and has devices Device2 and Device3. Device2 is Azure AD joined.  
Device2 is excluded from CAPolicy1 (which would block access to Site1). Box 3: Yes  
User2 is member of Group1 and has devices Device2 and Device3.  
Device3 is Android and is Azure AD registered.  
Device3 is excluded from CAPolicy1 (which would block access to Site1).  
Note: On Windows 7, iOS, Android, macOS, and some third-party web browsers, Azure AD identifies the device using a client certificate that is provisioned when the device is registered with Azure AD. When a user first signs in through the browser the user is prompted to select the certificate. The end user must select this certificate before they can continue to use the browser.

On which devices can you configure the Endpoint DLP policies?

- A. Windows 10 only
- B. Windows 10 and Android only
- C. Windows 10 and macO Sonly
- D. Windows 10, Android, and iOS

**Answer:** D

**Explanation:**  
Endpoint data loss prevention (Endpoint DLP) extends the activity monitoring and protection capabilities of DLP to sensitive items that are physically stored on Windows 10, Windows 11, and macOS (Catalina 10.15 and higher) devices. Once devices are onboarded into the Microsoft Purview solutions, the information about what users are doing with sensitive items is made visible in activity explorer and you can enforce protective actions on those items via DLP policies.

**NEW QUESTION 258**

HOTSPOT - (Topic 6)  
HOTSPOT  
You have a Microsoft 365 E5 subscription.

All company-owned Windows 11 devices are onboarded to Microsoft Defender for Endpoint.

You need to configure Defender for Endpoint to meet the following requirements:

? Block a vulnerable app until the app is updated.

? Block an application executable based on a file hash.

The solution must minimize administrative effort.

What should you configure for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

### Answer Area

Block a vulnerable app until the app is updated:

☐ An allow or block file
 ☐ A file indicator
 ☐ A remediation request
 ☐ An update ring

Block an application executable based on a file hash:

☐ An allow or block file
 ☐ A file indicator
 ☐ A remediation request
 ☐ An update ring

- A. Mastered
- B. Not Mastered

**Answer:** A

#### Explanation:

Box 1: A remediation request

Block a vulnerable app until the app is updated.

Block vulnerable applications

How to block vulnerable applications

? Go to Vulnerability management > Recommendations in the Microsoft 365 Defender portal.

? Select a security recommendation to see a flyout with more information.

? Select Request remediation.

? Select whether you want to apply the remediation and mitigation to all device groups or only a few.

? Select the remediation options on the Remediation request page. The remediation options are software update, software uninstall, and attention required.

? Pick a Remediation due date and select Next.

? Under Mitigation action, select Block or Warn. Once you submit a mitigation action, it is immediately applied.

? Review the selections you made and Submit request. On the final page you can

choose to go directly to the remediation page to view the progress of remediation activities and see the list of blocked applications.

Box 2: A file indicator

Block an application executable based on a file hash.

While taking the remediation steps suggested by a security recommendation, security admins with the proper permissions can perform a mitigation action and block vulnerable versions of an application. File indicators of compromise (IOC)s are created for each of the executable files that belong to vulnerable versions of that application. Microsoft Defender Antivirus then enforces blocks on the devices that are in the specified scope.

The option to View details of blocked versions in the Indicator page brings you to the Settings > Endpoints > Indicators page where you can view the file hashes and response actions.

Seamless single sign-on	Enabled	1 domain
Pass-through authentication	Enabled	2 agents

User2 fails to authenticate to Azure AD when signing in as user2@fabrikam.com. You need to ensure that User2 can access the resources in Azure AD. Solution: From the Microsoft Entra admin center, you assign User2 the Security Reader role. You instruct User2 to sign in as user2@contoso.com. Does this meet the goal?

- A. Yes
- B. No

Answer: B

### Explanation:

This is not a permissions issue so you do not need to assign the Security Reader role. The on-premises Active Directory domain is named contoso.com. User2 could sign on as user2@contoso.com but you would first need to change the UPN of User2 to user2@contoso.com.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: August 19  
Note: Security defaults will trigger a 14 day grace period for registration after a user's first login and security defaults being enabled. After 14 days users will be required to register for MFA and will not be able to skip.  
Conditional Access by itself without Azure Identity Protection does not allow for the 14 day grace period. Identity Protection includes the registration policy that allows registration on its own with no apps assigned to the policy. If a Conditional Access policy requires Multi- Factor Authentication, then the user must be able to pass that MFA request.  
Box 2: August 21

**NEW QUESTION 311**

- (Topic 6)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain. You deploy an Azure AD tenant.

Another administrator configures the domain to synchronize to Azure AD.

You discover that 10 user accounts in an organizational unit (OU) are NOT synchronized to Azure AD. All the other user accounts synchronized successfully.

You review Azure AD Connect Health and discover that all the user account synchronizations completed successfully.

You need to ensure that the 10 user accounts are synchronized to Azure AD. Solution: From the Synchronization Rules Editor, you create a new outbound synchronization rule.

Does this meet the goal?

A. Yes

B. No

**Answer:** B

**Explanation:**

The question states that “all the user account synchronizations completed successfully”. Therefore, the synchronization rule is configured correctly. It is likely that the 10 user accounts are being excluded from the synchronization cycle by a filtering rule.

**NEW QUESTION 313**

HOTSPOT - (Topic 6)

Your network contains an Active Directory domain and an Azure AD tenant.

You implement directory synchronization for all 10,000 users in the organization. You automate the creation of 100 new user accounts.

You need to ensure that the new user accounts synchronize to Azure AD as quickly as possible.

Which command should you run? To answer, select the appropriate options in the answer area.

**NEW QUESTION 316**

- (Topic 6)

You have a Microsoft 365 E5 subscription.

You plan to implement Microsoft Purview policies to meet the following requirements: Identify documents that are stored in Microsoft Teams and SharePoint that contain

Personally Identifiable Information (PII). Report on shared documents that contain PII. What should you create?

A. a data loss prevention (DLP) policy

- B. a retention policy
- C. an alert policy
- D. a Microsoft Defender for Cloud Apps policy

**Answer:** A

**Explanation:**

Demonstrate data protection

Protection of personal information in Microsoft 365 includes using data loss prevention (DLP) capabilities. With DLP policies, you can automatically protect sensitive information across Microsoft 365.

There are multiple ways you can apply the protection. Educating and raising awareness to where EU resident data is stored in your environment and how your employees are permitted to handle it represents one level of information protection using Office 365 DLP.

In this phase, you create a new DLP policy and demonstrate how it gets applied to the IBANs.docx file you stored in SharePoint Online in Phase 2 and when you attempt to send an email containing IBANs.

? From the Security & Compliance tab of your browser, click Home.

? Click Data loss prevention > Policy.

? Click + Create a policy.

? In Start with a template or create a custom policy, click Custom > Custom policy > Next.

? In Name your policy, provide the following details and then click Next: a. Name: EU Citizen PII Policy b. Description: Protect the personally identifiable information of European citizens

? Etc.

You have a Microsoft 365 E5 subscription that uses Microsoft Intune.

In the Microsoft Endpoint Manager admin center, you discover many stale and inactive devices.

You enable device clean-up rules.

What can you configure as the minimum number of days before a device is removed automatically?

- A. 10
- B. 30
- C. 45
- D. 90

**Answer:** D

**NEW QUESTION 325**

- (Topic 6)

Your company has three main offices and one branch office. The branch office is used for research.

The company plans to implement a Microsoft 365 tenant and to deploy multi-factor authentication.

You need to recommend a Microsoft 365 solution to ensure that multi-factor authentication is enforced only for users in the branch office.

What should you include in the recommendation?

- A. Azure AD password protection
- B. a Microsoft Intune device configuration profile
- C. a Microsoft Intune device compliance policy
- D. Azure AD conditional access

**Answer:** D

### NEW QUESTION 337

- (Topic 6)

You have a Microsoft 365 subscription.

You configure a new Azure AD enterprise application named App1. App1 requires that a user be assigned the Reports Reader role.

Which type of group should you use to assign the Reports Reader role and to access App1?

- A. a Microsoft 365 group that has assigned membership
- B. a Microsoft 365 group that has dynamic user membership
- C. a security group that has assigned membership
- D. a security group that has dynamic user membership

**Answer:** C

**Explanation:**

To grant permissions to assignees to manage users and group access for a specific enterprise app, go to that app in Azure AD and open in the Roles and Administrators list for that app. Select the new custom role and complete the user or group assignment. The assignees can manage users and group access only for the specific app.

Note: You can add the following types of groups:

Assigned groups - Manually add users or devices into a static group.

Dynamic groups (Requires Azure AD Premium) - Automatically add users or devices to user groups or device groups based on an expression you create.

Note:

Security groups

Security groups are used for granting access to Microsoft 365 resources, such as SharePoint. They can make administration easier because you need only administer the group rather than adding users to each resource individually.

Security groups can contain users or devices. Creating a security group for devices can be used with mobile device management services, such as Intune.

Security groups can be configured for dynamic membership in Azure Active Directory, allowing group members or devices to be added or removed automatically based on user attributes such as department, location, or title; or device attributes such as operating system version.

Security groups can be added to a team.

Microsoft 365 Groups can't be members of security groups. Microsoft 365 Groups

Microsoft 365 Groups are used for collaboration between users, both inside and outside your company. With each Microsoft 365 Group, members get a group email and shared workspace for conversations, files, and calendar events, Stream, and a Planner.

 NOTE: Each correct selection is worth one point.

Answer Area

Microsoft SharePoint files that are affected by the policy will be [answer choice].

recoverable for up to seven years

deleted seven years after they were created

retained for only seven years from when they were created

Once the policy is created, [answer choice].

some data may be deleted immediately

data will be retained for a minimum of seven years

users will be prevented from permanently deleting email messages for seven years

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Deleted seven years after they were created. From the exhibit:  
 The retention policy applies to SharePoint sites.  
 Delete items that are older than 7 years based on when they were created.  
 Box 2: data will retained for a minimum of seven years  
 The longest retention period wins. If content is subject to multiple retention settings that retain content for different periods of time, the content will be retained until the end of the longest retention period for the item.  
 Note: Use a retention policy to assign the same retention settings for content at a site or mailbox level, and use a retention label to assign retention settings at an item level (folder, document, email).  
 For example, if all documents in a SharePoint site should be retained for 5 years, it's more efficient to do this with a retention policy than apply the same retention label to all documents in that site. However, if some documents in that site should be retained for 5 years and others retained for 10 years, a retention policy wouldn't be able to do this. When you need to specify retention settings at the item level, use retention labels.

NEW QUESTION 346

 You have a Microsoft Azure Active Directory (Azure AD) tenant named Contoso.com. You create a Microsoft Defender for identity instance Contoso. The tenant contains the users shown in the following table.

Name	Member of group	Azure AD role
User1	Defender for Identity Contoso Administrators	None
User2	Defender for Identity Contoso Users	None
User3	None	Security administrator
User4	Defender for Identity Contoso Users	Global administrator

You need to modify the configuration of the Defender for identify sensors.  
 Solutions: You instruct User3 to modify the Defender for identity sensor configuration. Does this meet the goal?

- A. Yes
- B. No

Answer: A

#### NEW QUESTION 347

- (Topic 6)

Your company has a Microsoft 365 E5 subscription.

Users in the research department work with sensitive data.

You need to prevent the research department users from accessing potentially unsafe websites by using hyperlinks embedded in email messages and documents.

Users in other departments must not be restricted.

What should you do?

- A. Create a data loss prevention (DLP) policy that has a Content is shared condition.
- B. Modify the safe links policy Global settings.
- C. Create a data loss prevention (DLP) policy that has a Content contains condition.
- D. Create a new safe links policy.

**Answer: D**

#### Explanation:

Use the Microsoft 365 Defender portal to create Safe Links policies

In the Microsoft 365 Defender portal at <https://security.microsoft.com>, go to Email & Collaboration > Policies & Rules > Threat policies > Safe Links in the Policies section. Or, to go directly to the Safe Links page, use <https://security.microsoft.com/safelinksv2>.

\* 1. On the Safe Links page, select Create to start the new Safe Links policy wizard.

\* 2. On the Name your policy page, configure the following settings: Name: Enter a unique, descriptive name for the policy.

Description: Enter an optional description for the policy.

\* 3. When you're finished on the Name your policy page, select Next.

\* 4. On the Users and domains page, identify the internal recipients that the policy applies to (recipient conditions):

Users: The specified mailboxes, mail users, or mail contacts.

\*-> Groups:

Members of the specified distribution groups (including non-mail-enabled security groups within distribution groups) or mail-enabled security groups (dynamic distribution groups aren't supported).

The specified Microsoft 365 Groups.

Domains: All recipients in the specified accepted domains in your organization. Etc.
