Box 1.
We need to create a site and subnet for the remote site. The new site will be added to the Default IP Site Link so we don't need to create a new site link. You configure the replication schedule on the site link.
Box 2.
When we pre-create an RODC account, we can specify who is allowed to attach the server to the prestaged account. This means that the User1 does not need to be added to the Domain Admins group.
Box3.
User1 can connect the RODC to the prestaged account by running the AD DS installation wizard. Reference:

The contoso.local zone contains zone delegations for east.contoso.local and west.contoso.local. All the DNS servers use root hints.
You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.
Solution: You configure Server2 and Server3 to forward DNS requests to 10.0.1.10. Does this meet the goal?

A. Yes
B. No

NEW QUESTION 34
- (Exam Topic 3)
You have servers that have the DNS Server role installed. The servers are configured as shown in the following table.

Name	Office	Local DNS zone	IP address
Server1	Paris	contoso.com	10.1.1.1
Server2	New York	None	10.2.2.2

All the client computers in the New York office use Server2 as the DNS server.
You need to configure name resolution in the New York office to meet the following requirements:

> Ensure that the client computers in New York can resolve names from contoso.com.

> Ensure that Server2 forwards all DNS queries for internet hosts to 131. 107.100.200. The solution must NOT require modifications to Server1.
Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

A. a forwarder
B. a conditional forwarder
C. a delegation
D. a secondary zone
E. a reverse lookup zone

Answer: AB

Explanation:
A conditional forwarder is required for contoso.com. A forwarder is required for all other domains.
When you have a conditional forwarder and a forwarder configured, the conditional forwarder will be used for the specified domain.
You could use a secondary zone for contoso.com but that would require a configuration change on Server1.

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com. The domain contains a server named Server1 and the users shown in the following table.

Name	Member of
User1	Group1
User2	Group2
User3	Group3

Folder1 is shared by using the following configurations:

```
Path                  : D:\Folder1
Name                  : Share1
ShareType             : FileSystemDirectory

User1 can read the files in Share1.	○	○
User3 can delete files in Share1.	○	○
If User2 connects to \\Server1.adatum.com from File Explorer, Share1 will be listed.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
To access files in a shared folder, you need to be granted permissions on the folder (NTFS permissions) AND permissions on the share. The most restrictive permission of the folder permissions and share permissions apply.
Box 1: Yes
Group1 has Read access to Folder1 and Change access to Share1. Therefore, User1 can read the files in Share1.
Box 2: No
Group3 has Full Control access to Share1. However, Group3 has no permissions configured Folder1. Therefore, User3 cannot access the files in Share1.
Box 3: Yes
Group2 has write permission to Folder1. However, Group2 has no permission on Share1. Therefore, users in Group2 cannot access files in the shared folder.
Access Based Enumeration when enabled hides files and folders that users do not have permission to access. However, Access Based Enumeration is not enabled on Share1. This is indicated by the FolderEnumerationMode – Unrestricted setting. Therefore, the share will be visible to User2 even though User2 cannot access the shared folder.
