NEW QUESTION 2

- (Exam Topic 1)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com that is synced to Microsoft Azure Active Directory (Azure AD).

You manage Windows 10 devices by using Microsoft System Center Configuration Manager (Current Branch).

You configure a pilot for co-management.

You add a new device named Device1 to the domain. You install the Configuration Manager client on Device1.

You need to ensure that you can manage Device1 by using Microsoft Intune and Configuration Manager. Solution: Define a Configuration Manager device collection as the pilot collection. Add Device1 to the collection.

Does this meet the goal?

- A. Yes
- B. NO

Answer: A

Explanation:

Device1 has the Configuration Manager client installed so you can manage Device1 by using Configuration

Manager. To manage Device1 by using Microsoft Intune, the device has to be enrolled in Microsoft Intune. In the Co-management Pilot configuration, you configure a Configuration Manager Device Collection that determines which devices are auto-enrolled in Microsoft Intune. You need to add Device1 to the Device Collection so that it auto-enrolls in Microsoft Intune. You will then be able to manage Device1 using Microsoft Intune. NEW QUESTION 8

- (Exam Topic 4)

DRAG DROP

You have a Microsoft 365 subscription.

In the Exchange admin center, you have a data loss prevention (DLP) policy named Policy1 that has the following configurations:

- > Block emails that contain financial data.
- > Display the following policy tip text: Message blocked.

From the Security & Compliance admin center, you create a DLP policy named Policy2 that has the following configurations:

- > Use the following location: Exchange email.
- > Display the following policy tip text: Message contains sensitive data.
- > When a user sends an email, notify the user if the email contains health records.

What is the result of the DLP policies when the user sends an email? To answer, drag the appropriate results to the correct scenarios. Each result may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Results	Answer Area
The email will be blocked, and the user will receive the policy tip: Message blocked.	When the user sends an email that contains financial data and health records:
The email will be blocked, and the user will receive the policy tip: Message contains sensitive data.	
The email will be allowed, and the user will receive the policy tip: Message blocked.	When the user sends an email that contains only financial data:
The email will be allowed, and the user will receive the policy tip: Message contains sensitive data.	
The email will be allowed, and a message policy tip will NOT be displayed.	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: The email will be blocked, and the user will receive the policy tip: Message blocked.

If you've created DLP policies in the Exchange admin center, those policies will continue to work side by side with any policies for email that you create in the Security & Compliance Center. But note that rules created in the Exchange admin center take precedence. All Exchange mail flow rules are processed first, and then the DLP rules from the Security & Compliance Center are processed.

Box 2: The email will be allowed, and the user will receive the policy tip: Message contains sensitive data. Reference:
