Exam Questions AZ-800

Administering Windows Server Hybrid Core Infrastructure

About ExamBible

Your Partner of IT Exam

Found in 1998

ExamBible is a company specialized on providing high quality IT exam practice study materials, especially Cisco CCNA, CCDA, CCNP, CCIE, Checkpoint CCSE, CompTIA A+, Network+ certification practice exams and so on. We guarantee that the candidates will not only pass any IT exam at the first attempt but also get profound understanding about the certificates they have got. There are so many alike companies in this industry, however, ExamBible has its unique advantages that other companies could not achieve.

Our Advances

* 99.9% Uptime

All examinations will be up to date.

* 24/7 Quality Support

We will provide service round the clock.

* 100% Pass Rate

Our guarantee that you will pass the exam.

* Unique Gurantee

If you do not pass the exam at the first time, we will not only arrange FULL REFUND for you, but also provide you another exam of your claim, ABSOLUTELY FREE!

NEW QUESTION 1

SIMULATION - (Topic 4)

Task2

You need to ensure that the Azure file share named share1 can sync to on-premises servers.

The required source files are located in a folder named \\dc1.contoso.com\install. You do NOT need to specify the on-premises servers at this time.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

One possible solution to ensure that the Azure file share named share1 can sync to on-premises servers is to use Azure File Sync. Azure File Sync allows you to centralize your file shares in Azure Files without giving up the flexibility, performance, and compatibility of an on-premises file server. It does this by transforming your Windows Servers into a quick cache of your Azure file share. You can use any protocol available on Windows Server to access your data locally (including SMB, NFS, and FTPS) and you can have as many caches as you need across the world1.

Here are the steps to configure Azure File Sync for the Azure file share named share1 and the source files located in a folder named \\dc1.contoso.com\install:

? On the Azure portal, create a Storage Sync Service in the same region as your storage account that contains the Azure file share named share1. For more information on how to create a Storage Sync Service, see [How to deploy Azure File Sync](#).

? On the on-premises server that hosts the folder named \\dc1.contoso.com\install, install the Azure File Sync agent. For more information on how to install the Azure File Sync agent, see [Install the Azure File Sync agent](#).

? On the on-premises server, register the server with the Storage Sync Service that you created in the first step. For more information on how to register a server with a Storage Sync Service, see [Register/unregister a server with Storage Sync Service](#).

? On the Azure portal, create a sync group that defines the sync topology for a set of files. In the sync group, select the Azure file share named share1 as the cloud endpoint and the folder named \\dc1.contoso.com\install as the server endpoint.

For more information on how to create a sync group, see [Create a sync group and monitor sync progress](#). You can monitor the sync progress on the Azure portal or on the on-premises server. For more information on how to monitor sync progress, see [Monitor sync progress](#).

Once the initial sync is complete, you can add more on-premises servers to the same sync group to sync and cache the content locally. You can also enable cloud tiering to optimize the storage space on the on-premises servers by tiering infrequently accessed or older files to Azure Files.

NEW QUESTION 2

SIMULATION - (Topic 4)

Task 1

You need to prevent domain users from saving executable files in a share named \\SRV\Data. The users must be able to save other files to the share.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

One possible solution to prevent domain users from saving executable files in a share named \\SRV\Data is to use file screening on the file server. File screening allows you to block certain files from being saved based on their file name extension. Here are the steps to configure file screening:

? On the file server, open File Server Resource Manager from the Administrative Tools menu.

? In the left pane, expand File Screening Management and click on File Groups.

? Right-click on File Groups and select Create File Group.

? In the File Group Properties dialog box, enter a name for the file group, such as Executable Files.

? In the Files to include box, enter the file name extensions that you want to block, such as .exe, .bat, .cmd, .com, .msi, .scr. You can use wildcards to specify multiple extensions, such as *.exe.

? Click OK to create the file group.

? In the left pane, click on File Screen Templates.

? Right-click on File Screen Templates and select Create File Screen Template.

? In the File Screen Template Properties dialog box, enter a name for the template, such as Block Executable Files.

? On the Settings tab, select the option Active screening. Do not allow users to save unauthorized files.

? On the File Groups tab, check the box next to the file group that you created, such as Executable Files.

? On the Notification tab, you can configure how to notify users and administrators when a file screening event occurs, such as sending an email, logging an event, or running a command or script. You can also customize the message that users see when they try to save a blocked file.

? Click OK to create the file screen template.

? In the left pane, click on File Screens.

? Right-click on File Screens and select Create File Screen.

? In the Create File Screen dialog box, enter the path of the folder that you want to apply the file screening to, such as \\SRV\Data.

? Select the option Derive properties from this file screen template (recommended) and choose the template that you created, such as Block Executable Files.

? Click Create to create the file screen.

Now, domain users will not be able to save executable files in the share named \\SRV\Data. They will be able to save other files to the share.

NEW QUESTION 3

SIMULATION - (Topic 4)

Task 8

You need to create an Active Directory Domain Services (AD DS) site named Site2 that is associated to an IP address range of 192.168.2.0 to 192.168.2.255.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

To create an AD DS site named Site2 that is associated to an IP address range of 192.168.2.0 to 192.168.2.255, you can follow these steps:

? On a domain controller or a computer that has the Remote Server Administration

Tools (RSAT) installed, open Active Directory Sites and Services from the Administrative Tools menu or by typing dssite.msc in the Run box.

? In the left pane, right-click on Sites and select New Site.

? In the New Object - Site dialog box, enter Site2 as the Name of the new site.

Select a site link to associate the new site with, such as DEFAULTIPSITELINK, and click OK. You can also create a new site link if you want to customize the replication frequency and schedule between the sites. For more information on how to create a site link, see Create a Site Link.

? In the left pane, right-click on Subnets and select New Subnet.

? In the New Object - Subnet dialog box, enter 192.168.2.0/24 as the Prefix of the subnet. This notation represents the IP address range of 192.168.2.0 to 192.168.2.255 with a subnet mask of 255.255.255.0. Select Site2 as the Site object to associate the subnet with, and click OK.

? Wait for the changes to replicate to other domain controllers. You can verify the

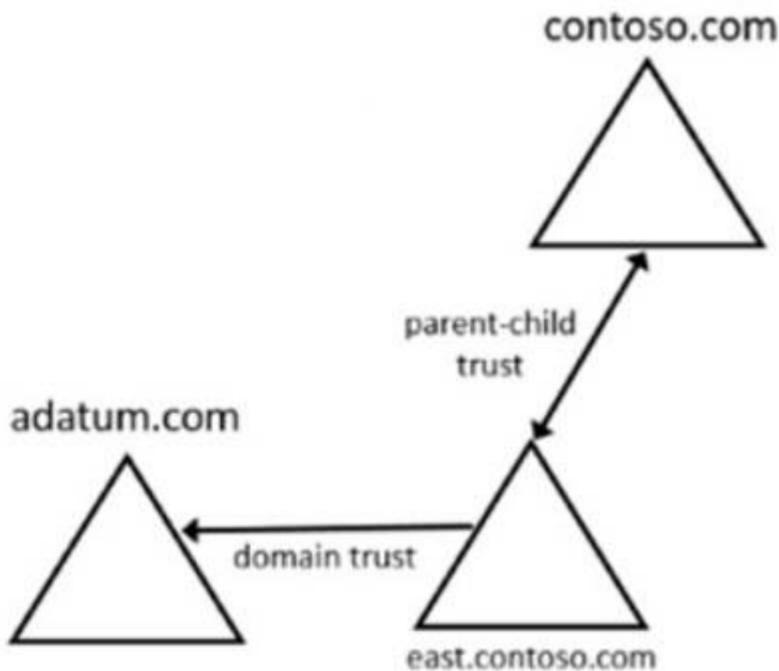

site and subnet creation by checking the Sites and Subnets containers in Active Directory Sites and Services.

Now, you have created an AD DS site named Site2 that is associated to an IP address range of 192.168.2.0 to 192.168.2.255. You can add domain controllers to the new site and configure the site links and site link bridges to optimize the replication topology.

NEW QUESTION 4

HOTSPOT - (Topic 3)

Your network contains two Active Directory forests and a domain trust as shown in the following exhibit.

The domain trust has the following configurations:

- Name: adatum.com
Type: External
- Direction: One-way, outgoing
- Outgoing trust authentication level: Domain-wide authentication

Name	Domain
User1	adatum.com
User2	contoso.com
User3	east.contoso.com

The forests contain the network shares shown in the following table.

Name	In domain
Share1	adatum.com
Share2	contoso.com
Share3	east.contoso.com

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
User1 can be assigned permissions for Share3.	<input type="radio"/>	<input type="radio"/>
User2 can be assigned permissions for Share1.	<input type="radio"/>	<input type="radio"/>
User3 can be assigned permissions for Share1.	<input type="radio"/>	<input type="radio"/>

A. Mastered

B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
User1 can be assigned permissions for Share3.	<input checked="" type="radio"/>	<input type="radio"/>
User2 can be assigned permissions for Share1.	<input type="radio"/>	<input checked="" type="radio"/>
User3 can be assigned permissions for Share1.	<input type="radio"/>	<input checked="" type="radio"/>

Topic 4, Labs

NEW QUESTION 5

- (Topic 3)

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains a DNS server named Server1. Server1 hosts a DNS zone named fabrikam.com that was signed by DNSSEC.

You need to ensure that all the member servers in the domain perform DNSSEC validation for the fabrikam.com namespace.

What should you do?

- A. On Server1, run the Add-DnsServerTrustAnchor cmdlet.
- B. On each member server, run the Add-DnsServerTrustAnchor cmdlet.
- C. From a Group Policy Object (GPO), add a rule to the Name Resolution Policy Table (NRPT).
- D. From a Group Policy Object (GPO), modify the Network List Manager policies.

Answer: C

NEW QUESTION 6

HOTSPOT - (Topic 3)

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a child domain named east.contoso.com and the servers shown in the following table.

Name	Domain	Description
DC1	contoso.com	Has the schema master, infrastructure master, and domain naming master roles
DC2	east.contoso.com	Has the PDC emulator and RID master roles and is a global catalog server
Server1	contoso.com	Has the File Server, DFS Namespaces, and DFS Replication server roles

You need to create a folder for the Central Store to manage Group Policy template files for the entire forest.

What should you name the folder, and on which server should you create the folder? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Name: These are the selections for Name:

- CentralDefinitions
- PolicyDefinitions**
- TemplateDefinitions

Server:

- DC1 only
- DC2 only
- Server1 only**
- DC1 and DC2 only
- DC1, DC2, and Server1

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Name: These are the selections for Name:

- CentralDefinitions
- PolicyDefinitions**
- TemplateDefinitions

Server:

- DC1 only
- DC2 only
- Server1 only**
- DC1 and DC2 only
- DC1, DC2, and Server1

NEW QUESTION 7

HOTSPOT - (Topic 3)

Your on-premises network contains an Active Directory Domain Services (AD DS) domain.

The domain contains the servers shown in the following table.

The domain controllers do NOT have internet connectivity.

You plan to implement Azure AD Password Protection for the domain.

You need to deploy Azure AD Password Protection agents. The solution must meet the following requirements:

- All Azure AD Password Protection policies must be enforced.
- Agent updates must be applied automatically.
- Administrative effort must be minimized.

What should you do? To answer select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Install the Azure AD Password Protection agent on:

- DC1 and DC2 only
- DC1 only
- DC1 and DC2 only**
- DC1, DC2, and RODC1

Install the Azure AD Password Protection Proxy on:

- Server1
- DC1
- DC2
- RODC1
- Server1**
- Server2

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Install the Azure AD Password Protection agent on: DC1 and DC2 only

Install the Azure AD Password Protection Proxy on: Server1

NEW QUESTION 8

- (Topic 3)

You have a server that runs Windows Server and contains a shared folder named UserData.

You need to limit the amount of storage space that each user can consume in UserData. What should you use?

- A. Storage Spaces
- B. Work Folders
- C. Distributed File System (DFS) Namespaces
- D. File Server Resource Manager (FSRM)**

Answer: D

Explanation:

Reference:

<https://docs.microsoft.com/en-us/windows-server/storage/fsrm/fsrm-overview>

NEW QUESTION 9

- (Topic 3)

You have an Azure virtual machine named VM1 that has a private IP address only. You configure the Windows Admin Center extension on VM1.

You have an on-premises computer that runs Windows 11. You use the computer for server management.

You need to ensure that you can use Windows Admin Center from the Azure portal to manage VM1.

What should you configure?

- A. an Azure Bastion host on the virtual network that contains VM1.
- B. a VPN connection to the virtual network that contains VM1.**
- C. a network security group (NSG) rule that allows inbound traffic on port 443.
- D. a private endpoint on the virtual network that contains VM1.

Answer: B

Explanation:

Reference:

<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/manage-vm>

NEW QUESTION 10

- (Topic 3)

You have an Azure virtual machine named VM1 that runs Windows Server and has the following configurations:

? Size: D2s_v4

? Operating system disk: 127-GiB standard SSD

? Data disk 128-GiB standard SSD

? Virtual machine generation: Gen 2

You plan to perform the following changes to VM1:

- ? Change the virtual machine size to D4s_v4.
- ? Detach the data disk.
- ? Add a new standard SSD.

Which changes require downtime for VM1?

- A. Detaching the data disk only and adding a new standard SSD.
- B. Detaching the data disk only.
- C. Changing the virtual machine size only.
- D. Adding a new standard SSD only.

Answer: C

Explanation:

Data disks can be added and detached without requiring downtime. Changing the VM size requires the VM to be restarted.

NEW QUESTION 10

- (Topic 3)

You have a Windows Server container host named Server 1 and a container image named Image1. You need to start a container from image1. The solution must run the container on a Hyper- V virtual machine. Which parameter should you specify when you run the docker run command?

- A. --expose
- B. --privileged
- C. --runtime
- D. --entrypoint
- E. --isolation

Answer: D

Explanation:

Reference:

<https://docs.microsoft.com/en-us/virtualization/windowscontainers/manage-containers/hyperv-container>

NEW QUESTION 11

DRAG DROP - (Topic 3)

Your network contains a single domain Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a single Active Directory site. You plan to deploy a read only domain controller (RODC) to a new datacenter on a server named Server1. A user named User1 is a member of the local Administrators group on Server1.

You need to recommend a deployment plan that meets the following requirements:

- ? Ensures that a user named User1 can perform the RODC installation on Server1
- ? Ensures that you can control the AD DS replication schedule to the Server1
- ? Ensures that Server1 is in a new site named RemoteSite1
- ? Uses the principle of least privilege

Which three actions should you recommend performing in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Answer Area

- Instruct User1 to run the Active Directory Domain Services installation Wizard on Server1.
- Create a site and a subnet.
- Create a site link.
- Pre-create an RODC account.
- Add User1 to the Contoso\Administrators group.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1.

We need to create a site and subnet for the remote site. The new site will be added to the Default IP Site Link so we don't need to create a new site link. You configure the replication schedule on the site link.

Box 2.

When we pre-create an RODC account, we can specify who is allowed to attach the server to the prestaged account. This means that the User1 does not need to be added to the Domain Admins group.

Box3.

User1 can connect the RODC to the prestaged account by running the AD DS installation wizard.

NEW QUESTION 12

HOTSPOT - (Topic 3)

Your company has offices in Boston and Montreal. The offices are connected by using a 10-Mbps WAN link that is often saturated. The office in Boston contains the following:

- An Active Directory Domain Services (AD DS) domain controller named DC1.
- A server named Server1 that runs Windows Server and has the File Server role installed. The office in Montreal contains 20 client computers that run Windows 10. Montreal does NOT have any servers.

The company plans to deploy a new line of business (LOB) application to all the client computers. The installation source files for the application are in \\Server1\Apps.

Answer Area

On Server1:

On the client computers:

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

On Server1:

On the client computers:

NEW QUESTION 16

- (Topic 3)

You have an Active Directory domain that contains a file server named Server1. Server1 runs Windows Server and includes the file shares shown in the following table.

Share Name	Path
Users	D:\Users
Accounts	D:\Dept\Accounts
Marketing	D:\Dept\Marketing
CustomerService	D:\Dept\CustomerService

When users login to the network they receive the following network drive mappings.

- H: maps to Wserver1\users\%UserName%
- G: maps to \\server1\%Department%

You need to limit the amount of space consumed by user's on Server1. The solution must meet the following requirements:

- Prevent users using more than 5GB of space on their H: drive
- Prevent Accounts department users from using more than 10GB of space on the G: drive
- Prevent Marketing department users from using more than 15GB of space on the G: drive
- Prevent Customer Service department users from using more than 2GB of space on the G: drive
- Minimize administrative effort. What should you use?

- A. File Server Resource Manager (FSRM) quotas
- B. Storage tiering
- C. NTFS Disk quotas
- D. Group Policy Preferences

Answer: A

NEW QUESTION 17

- (Topic 3)

You have an on-premises Active Directory Domain Services (AD DS) domain named contoso.com that syncs with Azure AD by using Azure AD Connect.

You enable password protection for contoso.com.

You need to prevent users from including the word Contoso as part of their password. What should you use?

- A. the Azure Active Directory admin center
- B. Active Directory Users and Computers
- C. Synchronization Service Manager
- D. Windows Admin Center

Answer: D

NEW QUESTION 21

DRAG DROP - (Topic 3)

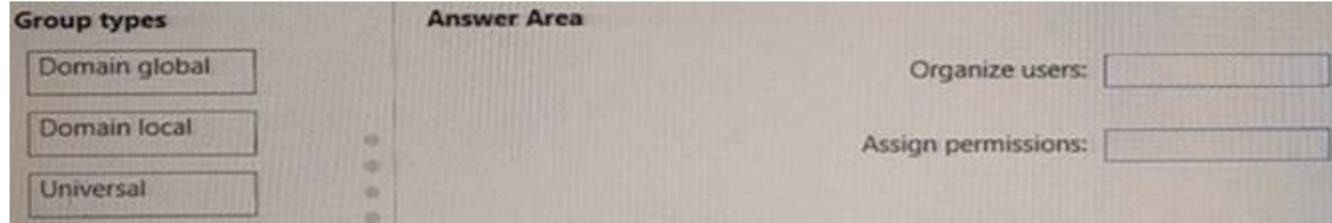

Your network contains two Active Directory Domain Services (AD DS) forests named contoso.com and fabrikam.com. Contoso.com contains three child domains named amer.contoso.com, apac.contoso.com, and emea.contoso.com. Fabrikam.com contains a child domain named apac.fabrikam.com. A bidirectional forest trust exists between contoso.com and fabrikam.com.

You need to provide users in the contoso.com forest with access to the resources in the fabrikam.com forest. The solution must meet the following requirements:

- Users in contoso.com must only be added directly to groups in the contoso.com forest.
- Permissions to access the resources in fabrikam.com must only be granted directly to groups in the fabrikam.com forest.
- The number of groups must be minimized.

Which type of groups should you use to organize the users and to assign permissions? To answer, drag the appropriate group types to the correct requirements. Each group type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

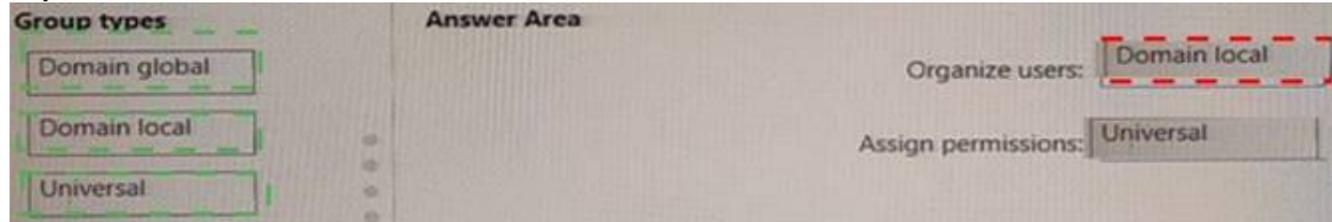

NOTE: Each correct selection is worth one point.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 23

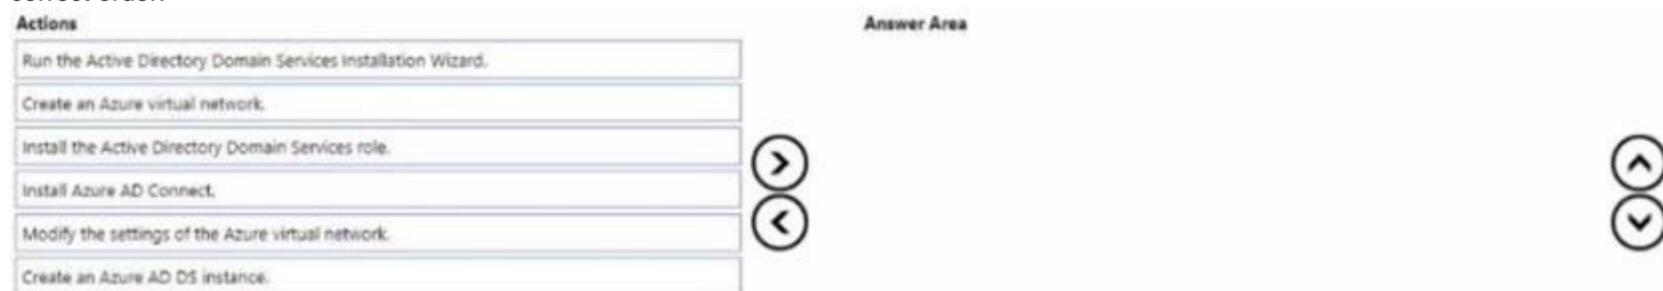

DRAG DROP - (Topic 3)

You create a new Azure subscription.

You plan to deploy Azure Active Directory Domain Services (Azure AD DS) and Azure virtual machines.

You need to ensure that the virtual machines can join Azure AD DS.

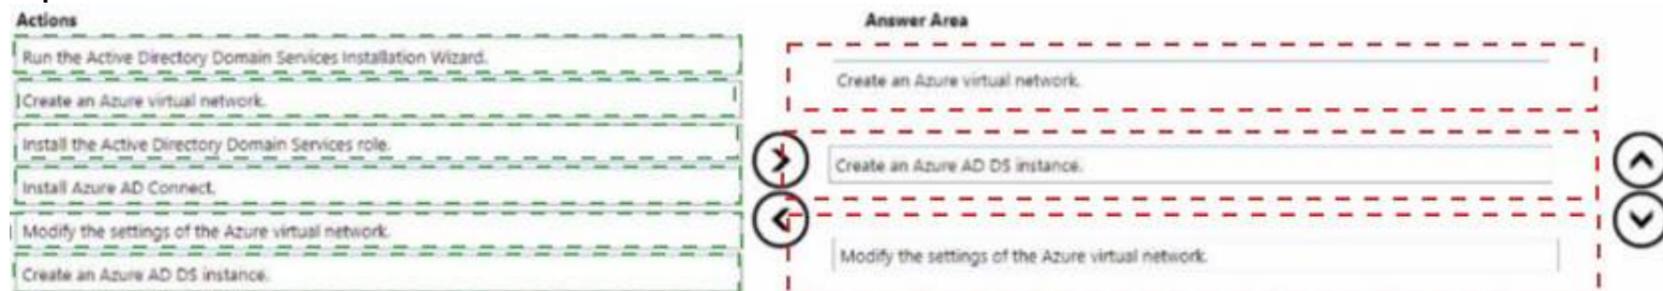

Which three actions should perform in sequence? To answer, move the appropriate actions from the list of action of the answer area and arrange them in the correct order.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 28

- (Topic 3)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory Domain Services (AD DS) forest. The forest contains three Active Directory sites named Site1, Site2, and Site3. Each site contains two domain controllers. The sites are connected by using DEFAULTIPSITELINK.

You open a new branch office that contains only client computers.

You need to ensure that the client computers in the new office are primarily authenticated by the domain controllers in Site1.

Solution: You create a new site named Site4 and associate Site4 to DEFAULTSITELINK. Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 31

- (Topic 3)

You have an Azure virtual machine named VM1 that runs Windows Server.

You need to ensure that administrators request access to VM1 before establishing a Remote Desktop connection.

What should you configure?

- A. Azure Front Door
- B. Microsoft Defender for Cloud
- C. Azure AD Privileged Identity Management (PIM)
- D. a network security group (NSG)

Answer: B

NEW QUESTION 33

DRAG DROP - (Topic 3)

Your network contains an Active Directory domain named contoso.com. The domain contains group managed service accounts (gMSAs). You have a server named Server1 that runs Windows Server and is in a workgroup. Server1 hosts Windows containers.

You need to ensure that the Windows containers can authenticate to contoso.com. Which three actions should you perform in sequence? To answer, move the appropriate

actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- On Server1, install and run ccg.exe.
- On Server1, run New-CredentialSpec.
- In contoso.com, generate a Key Distribution Service (KDS) root key.
- In contoso.com, create a gMSA and a standard user account.
- From a domain-joined computer, create a credential spec file and copy the file to Server1.

Answer Area

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Actions

- On Server1, install and run ccg.exe.
- On Server1, run New-CredentialSpec.
- In contoso.com, generate a Key Distribution Service (KDS) root key.
- In contoso.com, create a gMSA and a standard user account.
- From a domain-joined computer, create a credential spec file and copy the file to Server1.

Answer Area

- In contoso.com, generate a Key Distribution Service (KDS) root key.
- In contoso.com, create a gMSA and a standard user account.
- From a domain-joined computer, create a credential spec file and copy the file to Server1.

NEW QUESTION 36

HOTSPOT - (Topic 3)

You have a Windows Server container host named Server1 and an Azure subscription. You deploy an Azure container registry named Registry1 to the subscription.

On Server1, you create a container image named image1. You need to store imager in Registry1.

Which command should you run on Server1 ? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

docker
azcopy
xcopy
git

export
import
pull
push

Registry1.azurecr.io /image1

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

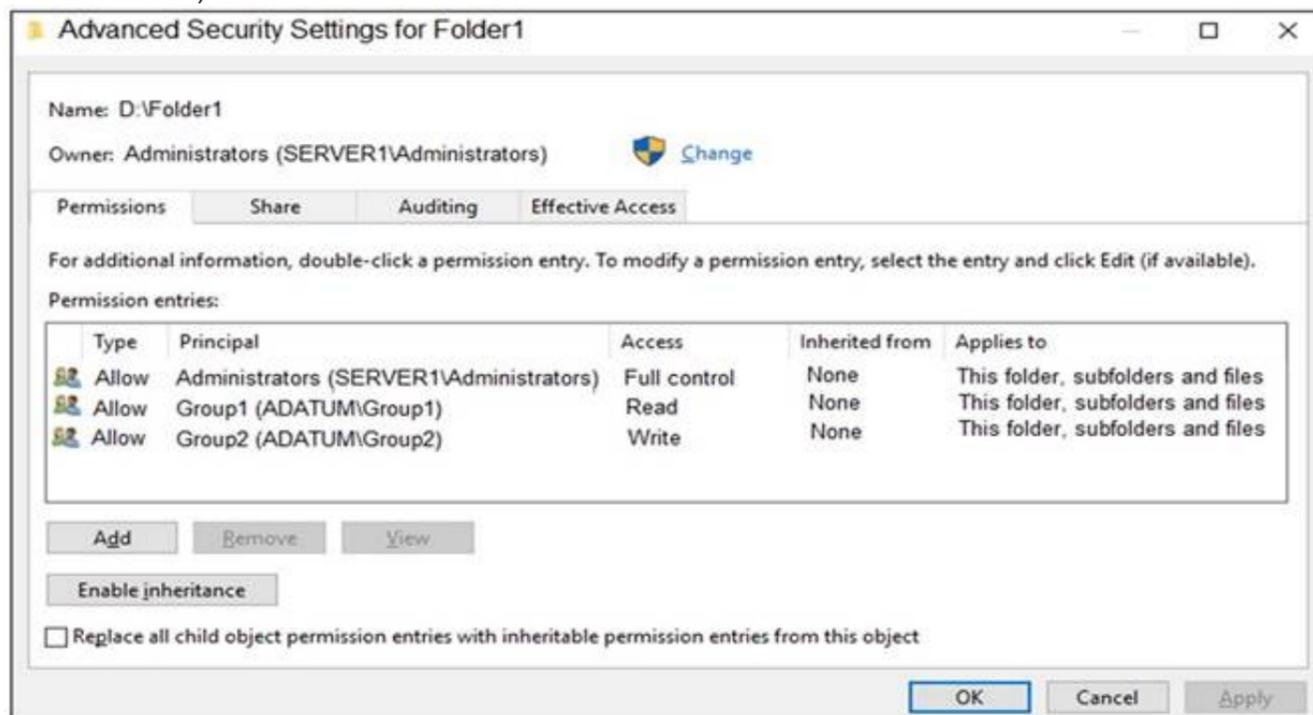

NEW QUESTION 40

HOTSPOT - (Topic 3)

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com. The domain contains a server named Server1 and the users shown in the following table.

Name	Member of
User1	Group1
User2	Group2
User3	Group3

Server1 contains a folder named D:\Folder1. The advanced security settings for Folder1 are configured as shown in the Permissions exhibit. (Click the Permissions tab.)

Folder1 is shared by using the following configurations:

```
Path           : D:\Folder1
Name           : Share1
ShareType      : FileSystemDirectory
FolderEnumerationMode : Unrestricted
```

The share permissions for Share1 are shown in the following table.

Group	Permission
Group1	Allow – Change
Group3	Allow – Full Control

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
 NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 can read the files in Share1.	<input type="radio"/>	<input type="radio"/>
User3 can delete files in Share1.	<input type="radio"/>	<input type="radio"/>
If User2 connects to \\Server1.adatum.com from File Explorer, Share1 will be listed.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

To access files in a shared folder, you need to be granted permissions on the folder (NTFS permissions) AND permissions on the share. The most restrictive permission of the folder permissions and share permissions apply.

Box 1: Yes

Group1 has Read access to Folder1 and Change access to Share1. Therefore, User1 can read the files in Share1.

Box 2: No

Group3 has Full Control access to Share1. However, Group3 has no permissions configured Folder1. Therefore, User3 cannot access the files in Share1.

Box 3: Yes

Group2 has write permission to Folder1. However, Group2 has no permission on Share1. Therefore, users in Group2 cannot access files in the shared folder. Access Based Enumeration when enabled hides files and folders that users do not have permission to access. However, Access Based Enumeration is not enabled on Share1.

This is indicated by the FolderEnumerationMode – Unrestricted setting. Therefore, the share will be visible to User2 even though User2 cannot access the shared folder.

NEW QUESTION 42

HOTSPOT - (Topic 3)

You have 10 on-premises servers that run Windows Server.

You plan to use Azure Network Adapter to connect the servers to the resources in Azure.

Which prerequisites do you require on-premises and in Azure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

To configure the on-premises servers, use:

<input type="checkbox"/> Azure CLI
<input type="checkbox"/> Routing and Remote Access
<input type="checkbox"/> Server Manager
<input type="checkbox"/> Windows Admin Center

To connect the Azure resources and Azure Network Server Manager Adapter, use:

<input type="checkbox"/> Azure Bastion
<input type="checkbox"/> Azure Firewall
<input type="checkbox"/> An Azure virtual network gateway
<input type="checkbox"/> A private endpoint
<input type="checkbox"/> A public Azure Load Balancer

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

To configure the on-premises servers, use:

Azure CLI
Routing and Remote Access
Server Manager
Windows Admin Center

To connect the Azure resources and Azure Network Server Manager Adapter, use:

Azure Bastion
Azure Firewall
An Azure virtual network gateway
A private endpoint
A public Azure Load Balancer

NEW QUESTION 47

DRAG DROP - (Topic 3)

You have a disaggregated cluster deployment. The deployment contains a scale-out file server (SOFS) cluster that runs Windows Server and a compute cluster that has the Hyper-V role enabled.

You need to implement Storage Quality of Service (QoS). The solution must ensure that you can control the bandwidth usage between the SOFS cluster and the Hyper-V cluster.

Which cmdlet should you run on each cluster? To answer, drag the appropriate cmdlets to the correct clusters. Each cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

<p>Cmdlets</p> <div style="border: 1px solid gray; padding: 5px; margin-bottom: 5px;">New-StorageQosPolicy</div> <div style="border: 1px solid gray; padding: 5px; margin-bottom: 5px;">Set-VHHardDiskDrive</div> <div style="border: 1px solid gray; padding: 5px;">Set-VHSan</div>	<p>Answer Area</p> <p>SOFS: <input style="width: 100px; height: 20px;" type="text"/></p> <p>Hyper-V: <input style="width: 100px; height: 20px;" type="text"/></p>
---	--

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

<p>Cmdlets</p> <div style="border: 1px dashed gray; padding: 5px; margin-bottom: 5px;">New-StorageQosPolicy</div> <div style="border: 1px dashed gray; padding: 5px; margin-bottom: 5px;">Set-VHHardDiskDrive</div> <div style="border: 1px dashed gray; padding: 5px;">Set-VHSan</div>	<p>Answer Area</p> <p>SOFS: New-StorageQosPolicy</p> <p>Hyper-V: Set-VHHardDiskDrive</p>
--	---

NEW QUESTION 50

- (Topic 3)

You have a server named Server1 that runs Windows Server.

You plan to host applications in Windows containers.

You need to configure Server1 to run containers. What should you install?

- A. Windows Admin Center
- B. the Windows Subsystem for Linux
- C. Docker
- D. Hyper-V

Answer: C

NEW QUESTION 52

HOTSPOT - (Topic 3)

Your company has a main office and 10 branch offices that are connected by using WAN links. The network contains an Active Directory domain.

All users have laptops and regularly travel between offices. You plan to implement BranchCache in the branch offices.

In each branch office, you install a server that runs Windows Server and the BranchCache feature. You register the servers in Active Directory.

You need to configure the laptops to use the local BranchCache server automatically. The solution must minimize administrative effort.

Which two Group Policy settings should you configure? To answer, select the settings in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Setting	State
Turn on BranchCache	Not configured
Set BranchCache Distributed Cache mode	Not configured
Set BranchCache Hosted Cache mode	Not configured
Enable Automatic Hosted Cache Discovery by Service Connection...	Not configured
Configure Hosted Cache Servers	Not configured
Configure BranchCache for network files	Not configured
Set percentage of disk space used for client computer cache	Not configured
Set age for segments in the data cache	Not configured
Configure Client BranchCache Version Support	Not configured

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

- > Turn on BranchCache
- > Enable Automatic Hosted Cache Discovery by Service Connection ...

NEW QUESTION 57

- (Topic 3)

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains a user named User1 and the servers shown in the following table.

Name	Server role	DHCP scope
Server1	DHCP Server	Scope1, Scope2
Server2	DHCP Server	Scope3, Scope4

You need to ensure that User1 can manage only Scope1 and Scope3. What should you do?

- A. Add User1 to the DHCP Administrators group on Server1 and Server2.
- B. Implement IP Address Management (IPAM).
- C. Add User1 to the DHCP Administrators domain local group.
- D. Implement Windows Admin Center and add connections to Server1 and Server2.

Answer: B

NEW QUESTION 60

HOTSPOT - (Topic 3)

Your on-premises network contains a single-domain Active Directory Domain Services (AD DS) forest. You have an Azure AD tenant named contoso.com. The AD DS forest syncs with the Azure AD tenant by using Azure AD Connect.

You need to ensure that users in the forest that have a custom attribute of NoSync are excluded from synchronization.

How should you configure the Azure AD Connect cloudFiltered attribute, and which tool should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Attribute:

Tool:

Answer:

Answer Area

Attribute:

Tool:

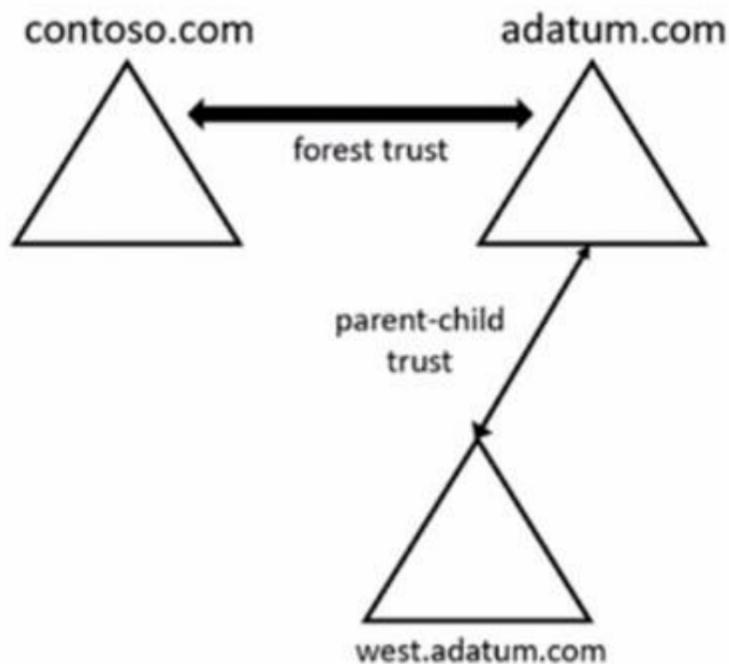

- A. Mastered
- B. Not Mastered

Answer: A

NEW QUESTION 64

HOTSPOT - (Topic 3)

Your network contains two Active Directory Domain Services (AD DS) forests as shown in the following exhibit.

The forests contain the domain controllers shown in the following table.

Name	Domain	Global catalog	Schema master
DC1	adatum.com	Yes	Yes
DC2	adatum.com	No	No
DC3	west.adatum.com	Yes	No
DC4	contoso.com	Yes	Yes

You perform the following actions on DO:

- Create a user named User1.
- Extend the schema with a new attribute named Attribute1

To which domain controllers are User1 and Attribute1 replicated? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

User1: (dropdown menu open with options: DC2 only, DC3 only, DC2 and DC3 only, DC3 and DC4 only, DC2, DC3, and DC4)

Attribute1: (dropdown menu open with options: DC2, DC3, and DC4, DC2 only, DC4 only, DC2 and DC3 only, DC2, DC3, and DC4)

Answer:

Answer Area

User1: (dropdown menu open with options: DC2 only, DC3 only, DC2 and DC3 only, DC3 and DC4 only, DC2, DC3, and DC4)

Attribute1: (dropdown menu open with options: DC2, DC3, and DC4, DC2 only, DC4 only, DC2 and DC3 only, DC2, DC3, and DC4)

- A. Mastered
- B. Not Mastered

Answer: A

NEW QUESTION 66

HOTSPOT - (Topic 3)

You need to sync files from an on premises server named Server1 to Azure by using Azure File Sync.

You have a cloud tiering policy that is configured for 30 percent free space and 70 days. Volume E on Server1 is 500 GB. A year ago, you configured E:\Data on Server1 to sync by using Azure File Sync. The files that are visible in E:\Data are shown in the following table.

Name	Size	Last accessed
File1	200 GB	2 days ago
File2	100 GB	10 days ago
File3	200 GB	60 days ago
File4	50 GB	100 days ago

Volume E does NOT contain any other files.
 Where are File1 and File3 located? To answer, select the appropriate options in the answer area.
 NOTE: Each correct selection is worth one point.

File1:

Server1 only
The Azure file share only
Server1 and the Azure file share

File3:

Server1 only
The Azure file share only
Server1 and the Azure file share

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

File1:

Server1 only
The Azure file share only
Server1 and the Azure file share

File3:

Server1 only
The Azure file share only
Server1 and the Azure file share

NEW QUESTION 71
 HOTSPOT - (Topic 3)

You need to sync files from an on-premises server named Server1 to Azure by using Azure File Sync

You have a cloud tiering policy that is configured for 30 percent free space and 70 days. Volume f on Server1 is 500 GB. A year ago, you configured E:\Oata on Server1 to sync by using Azure File Sync. The files that are visible in E:\Data are shown in the following table.

Name	Size	Last accessed
File1	200 GB	2 days ago
File2	100 GB	10 days ago
File3	200 GB	60 days ago
File4	50 GB	100 days ago

Volume E does NOT contain any other files.
 Where are File1 and file3 located? To answer, select the appropriate options In the answer area.

Answer Area

File1: Server1 only
 The Azure file share only
 Server1 and the Azure file share

File3: Server1 only
 The Azure file share only
 Server 1 and the Azure file share

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

File1: Server1 only
 The Azure file share only
 Server1 and the Azure file share

File3: Server1 only
 The Azure file share only
 Server 1 and the Azure file share

NEW QUESTION 72

- (Topic 3)

Your network contains a Active Directory Domain Service (AD DS) forest named contoso.com. The forest root domain contains a server named server1.contoso.com.

A two-way forest trust exists between the contoso.com forest and an AD DS forest named fabrikam.com. The fabrikam.com forest contains 10 child domains. You need to ensure that only the members of a group named fabrikam\Group1 can authenticate to server1.contoso.com.

What should you do first?

- A. Change the trust to a one-way external trust.
- B. Add fabrikam\Group1 to the local Users group on server1.contoso.com.
- C. Enable SID filtering for the trust.
- D. Enable Selective authentication for the trust.

Answer: B

NEW QUESTION 75

HOTSPOT - (Topic 3)

Your network contains a two-domain on-premises Active Directory Domain Services (AD DS) forest named Contoso.com. The forest contains the domain controllers shown in the following table.

Name	Description	Domain	Active Directory site
DC1	Forest-wide and domain-wide FSMO role holder	contoso.com	Hub
DC2	Domain-wide FSMO role holder	child.contoso.com	Site1
RODC3	Read-only domain controller (RODC)	contoso.com	Site2

You create an Active Directory site named Site3. Site1, Site2 and Site3 each has a dedicated site link to the Hub site.

In Site3, you install a new server named Server1.

You need to promote Server1 to an ROOC in child.contoso.com by using the install from Media (IFM) option. The solution must minimize network traffic.

What should you do? To answer select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Server to use to create the IFM source: DC1
 DC2
 Server1
 RODC3

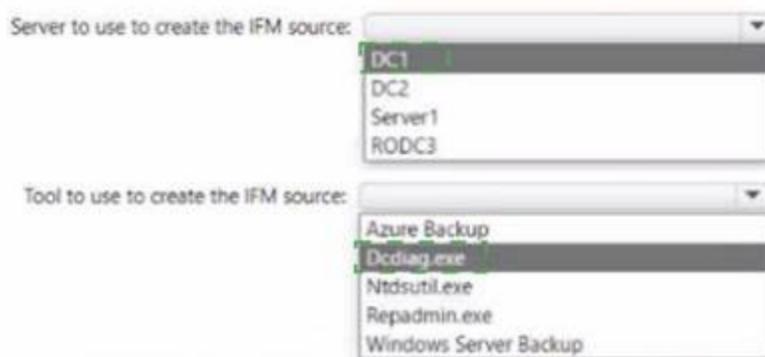

Tool to use to create the IFM source: Azure Backup
 Dcdiag.exe
 Ntdsutil.exe
 Repadmin.exe
 Windows Server Backup

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 80

- (Topic 3)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are planning the deployment of DNS to a new network.

You have three internal DNS servers as shown in the following table.

Name	Location	IP address	Local DNS zone
Server1	Montreal	10.0.1.10	contoso.local
Server2	Toronto	10.0.2.10	east.contoso.local
Server3	Seattle	10.0.3.10	west.contoso.local

The contoso.local zone contains zone delegations for east.contoso.local and west.contoso.local. All the DNS servers use root hints.

You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.

Solution: On Server2, you create a conditional forwarder for contoso.local and west.contoso.local. On Server3, you create a conditional forwarder for contoso.local and east.contoso.local.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 83

- (Topic 3)

You have an Azure Active Directory Domain Services (Azure AD DS) domain named contoso.com.

You need to provide an administrator with the ability to manage Group Policy Objects (GPOs). The solution must use the principle of least privilege.

To which group should you add the administrator?

- A. AAD DC Administrators
- B. Domain Admins
- C. Schema Admins
- D. Enterprise Admins
- E. Group Policy Creator Owners

Answer: B

Explanation:

Only the Domain Admins group and the Enterprise Admins group can fully manage GPOs. Members of the Group Policy Creator Owners group can create new GPOs but they can't link the GPOs to sites, the domain or OUs and they cannot manage existing GPOs.

NEW QUESTION 86

- (Topic 3)

You have an Azure virtual machine named VM1 that runs Windows Server

You need to configure the management of VM1 to meet the following requirements:

- Require administrators to request access to VM1 before establishing a Remote Desktop connection.
- Limit access to VM1 from specific source IP addresses.
- Limit access to VM1 to a specific management port What should you configure?

- A. a network security group (NSG)
- B. Azure Active Directory (Azure AD) Privileged identity Management (PIM)
- C. Azure Front Door
- D. Microsoft Defender for Cloud

Answer: D

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/defender-fo>

NEW QUESTION 87

HOTSPOT - (Topic 3)

You have a server named Server1 that runs Windows Server and has the Hyper-V server role installed. You need 10 limit which Hyper-V module cmdlets helpdesk users can use when administering Server 1 remotely. You configure Just Enough Administration (JEA) and successfully build the role capabilities and session configuration files. How should you complete the PowerShell command? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

NEW QUESTION 89

- (Topic 3)

Your network contains an on-premises Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains three servers that run Windows Server and have the Hyper-V server role installed. Each server has a Switch Embedded Teaming (SET) team. You need to verify that Remote Direct Memory Access (RDMA) and all the required Windows Server settings are configured properly on each server. What should you use?

- A. Server Manager
- B. the validate-DCB cmdlet
- C. the Get-NetAdaptor cmdlet
- D. Failover Cluster Manager

Answer: B

Explanation:

Reference: <https://github.com/Microsoft/Validate-DCB>

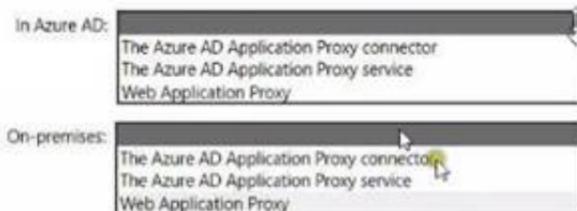

NEW QUESTION 91

HOTSPOT - (Topic 3)

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant.

You have an on-premises web app named WebApp1 that only supports Kerberos authentication. You need to ensure that users can access WebApp1 by using their Azure AD account. The solution must minimize administrative effort. What should you configure? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

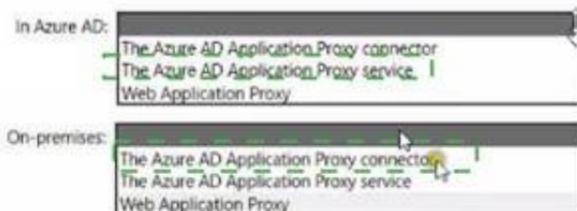

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

NEW QUESTION 95

DRAG DROP - (Topic 3)

You deploy a single-domain Active Directory Domain Services (AD DS) forest named contoso.com.

You deploy five servers to the domain. You add the servers to a group named iTFarmHosts.

You plan to configure a Network Load Balancing (NLB) cluster named NLBCluster.contoso.com that will contain the five servers.

You need to ensure that the NLB service on the nodes of the cluster can use a group managed service account (gMSA) to authenticate.

Which three PowerShell cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Cmdlets

- Add-KdsRootKey
- Set-KdsConfiguration
- Install-ADServiceAccount
- Add-ADGroupMember
- New-ADServiceAccount
- Add-ADComputerServiceAccount

Answer Area

>
<

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Cmdlets

- Add-KdsRootKey
- Set-KdsConfiguration
- Install-ADServiceAccount
- Add-ADGroupMember
- New-ADServiceAccount
- Add-ADComputerServiceAccount

Answer Area

- Add-KdsRootKey

NEW QUESTION 96

HOTSPOT - (Topic 3)

Your network contains an Azure AD Domain Services domain named contoso.com.

You need to configure a password policy for the local user accounts on the Azure virtual machines joined to contoso.com.

What should you do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Sign in by using a user account that is a member of the:

- AAD DC Administrators group
- AAD DC Administrators group
- Administrators group
- Domain Admins group

Use a Group Policy Object (GPO) linked to the:

- AADDC Users organizational unit (OU)
- AADDC Computers organizational unit (OU)
- AADDC Users organizational unit (OU)
- Computers container

Answer:

Answer Area

Sign in by using a user account that is a member of the:

- AAD DC Administrators group
- AAD DC Administrators group
- Administrators group
- Domain Admins group

Use a Group Policy Object (GPO) linked to the:

- AADDC Users organizational unit (OU)
- AADDC Computers organizational unit (OU)
- AADDC Users organizational unit (OU)
- Computers container

- A. Mastered
- B. Not Mastered

Answer: A

NEW QUESTION 99

HOTSPOT - (Topic 3)

You have an Azure Active Directory Domain Services (Azure AD DS) domain. You create a new user named Admin1.

You need Admin1 to deploy custom Group Policy settings to all the computers in the domain. The solution must use the principle of least privilege.

What should you include in the solution? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point

Add Admin1 to the following group:

AAD DC Administrators
Domain Admins
Group Policy Creator Owners

Instruct Admin1 to apply the custom Group Policy settings by:

Creating a new Group Policy Object (GPO) and linking the GPO to the domain
Modifying AADDC Computers GPO
Modifying the default domain GPO

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 102

- (Topic 3)

Your company has a main office and a branch office. The two offices are connected by using a WAN link. Each office contains a firewall that filters WAN traffic. The network in the branch office contains 10 servers that run Windows Server. All servers are administered from the main office only. You plan to manage the servers in the branch office by using a Windows Admin Center gateway. On a server in the branch office, you install the Windows Admin Center gateway by using the defaults settings. You need to configure the firewall in the branch office to allow the required inbound connection to the Windows Admin Center gateway. Which inbound TCP port should you allow?

- A. 443
- B. 3389
- C. 5985
- D. 6516

Answer: A

NEW QUESTION 104

HOTSPOT - (Topic 3)

You have on-premises file servers that run Windows Server as shown in the following table.

Name	Relevant folder
Server1	D:\Folder1, E:\Folder2
Server2	D:\Data

You have the Azure file shares shown in the following table.

Name	Location
share1	East US
share2	East US

You add a Storage Sync Service named Sync1 and an Azure File Sync sync group named Group1. Group1 uses share1 as a cloud endpoint. You register Server1 and Server2 with Sync1. You add D:\Folder1 from Server1 as a server endpoint in Group1. For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements

Yes **No**

You can add share2 as a cloud endpoint in Group1.

You can add E:\Folder2 from Server1 as a server endpoint in Group1.

You can add D:\Data from Server2 as a server endpoint in Group1.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Statements	Yes	No
You can add share2 as a cloud endpoint in Group1.	<input type="radio"/>	<input checked="" type="radio"/>
You can add E:\Folder2 from Server1 as a server endpoint in Group1.	<input checked="" type="radio"/>	<input type="radio"/>
You can add D:\Data from Server2 as a server endpoint in Group1.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 108

- (Topic 3)

You plan to deploy a containerized application that requires .NET Core. You need to create a container image for the application. The image must be as small as possible. Which base image should you use?

- A. Nano Server
- B. Server Cote
- C. Windows Server
- D. Windows

Answer: A

Explanation:

Reference:
<https://techcommunity.microsoft.com/t5/containers/nano-server-x-server-core-x-server-which-base-image-is-the-right/ba-p/2835785>

NEW QUESTION 113

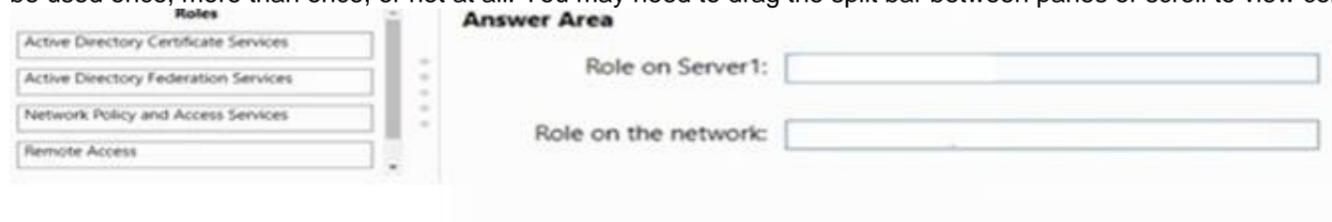

DRAG DROP - (Topic 3)

Your network contains an Active Directory domain, a web app named App1, and a perimeter network. The perimeter network contains a server named Server1 that runs Windows Server.

You plan to provide external access to App1.

You need to implement the Web Application Proxy role service on Server1.

Which role should you add to Server1, and which role should you add to the network? To answer, drag the appropriate roles to the correct targets. Each role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 117

- (Topic 3)

You have a server named Server1 that hosts Windows containers. You plan to deploy an application that will have multiple containers. Each container will be You need to create a Docker network that supports the deployment of the application. Which type of network should you create?

- A. transparent
- B. I2bridge
- C. NAT
- D. I2tunnel

Answer: A

Explanation:

Reference:

<https://docs.microsoft.com/en-us/virtualization/windowscontainers/container-networking/network-drivers-topologies>

NEW QUESTION 118

- (Topic 3)

Your network contains an Active Directory Domain Services (AD DS) forest. The forest contains three Active Directory sites named Site1, Site2, and Site3. Each site contains two domain controllers. The sites are connected by using DEFAULTIPSITELINK.

You open a new branch office that contains only client computers.

You need to ensure that the client computers in the new office are primarily authenticated by the domain controllers in Site1.

Solution: You configure the Try Next Closest Site Group Policy Object (GPO) setting in a GPO that is linked to Site1.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 122

HOTSPOT - (Topic 3)

Your on-premises network contains an Active Directory domain named contoso.com and 500 servers that run Windows Server. All the servers are Azure Arc-enabled and joined to contoso.com.

You need to implement PowerShell Desired State Configuration (DSC) on all the servers. The solution must minimize administrative effort.

Where should you store the DSC scripts, and what should you use to apply DSC to the servers? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Store in:

- An Azure Automation account
- An Azure App Configuration store
- An Azure Automation account**
- An Azure Policy definition

Use:

- Guest configuration in Azure Policy
- A Group Policy Object (GPO) in Active Directory Domain Services (AD DS)
- Azure virtual machine extensions
- Guest configuration in Azure Policy**

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Store in:

- An Azure Automation account
- An Azure App Configuration store
- An Azure Automation account**
- An Azure Policy definition

Use:

- Guest configuration in Azure Policy
- A Group Policy Object (GPO) in Active Directory Domain Services (AD DS)
- Azure virtual machine extensions
- Guest configuration in Azure Policy**

NEW QUESTION 127

HOTSPOT - (Topic 3)

You have a server named Server1 that runs Windows Server and contains three volumes named C, D, and E. Files are stored on Server1 as shown in the following table.

Name	On volume	Size
File1	C	500 KB
File2	D	10 KB
File3	D	1 MB

For volume D, Data Deduplication is enabled and set to General purpose file server. You perform the following actions:

- Move File1 to volume D.
- Copy File2 to volume D and name the copy File4.
- Move File3 to volume E

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
File1 is deduplicated after the deduplication job runs.	<input type="radio"/>	<input type="radio"/>
File3 is deduplicated after the deduplication job runs.	<input type="radio"/>	<input type="radio"/>
File4 is deduplicated after the deduplication job runs.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
File1 is deduplicated after the deduplication job runs.	<input type="radio"/>	<input checked="" type="radio"/>
File3 is deduplicated after the deduplication job runs.	<input type="radio"/>	<input checked="" type="radio"/>
File4 is deduplicated after the deduplication job runs.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 131

HOTSPOT - (Topic 2)

You need to configure Azure File Sync to meet the file sharing requirements. What should you do? To answer, select the appropriate options in the answer area.

NOTE Each correct selection is worth one point.

Answer Area

Minimum number of sync groups to create:

Minimum number of Storage Sync Services to create:

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Minimum number of sync groups to create:

Minimum number of Storage Sync Services to create:

NEW QUESTION 132

- (Topic 2)

You need to configure the Group Policy settings to ensure that the Azure Virtual Desktop session hosts meet the security requirements. What should you configure?

- A. security filtering for the link of GP04
- B. security filtering for the link of GPO1
- C. loopback processing in GPO4
- D. the Enforced property for the link of GP01
- E. loopback processing in GPO1
- F. the Enforced property for the link of GP04

Answer: C

NEW QUESTION 134

- (Topic 2)

You need to configure remote administration to meet the security requirements. What should you use?

- A. just in time (JIT) VM access
- B. Azure AD Privileged Identity Management (PIM)
- C. the Remote Desktop extension for Azure Cloud Services
- D. an Azure Bastion host

Answer: A

Explanation:

Reference:
