Exam Questions OGEA-103

TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam

NEW QUESTION 1

- (Topic 1)

Which of the following supports the need to govern Enterprise Architecture?

- A. The Architecture Project mandates the governance of the target architecture
- B. The TOGAF standard cannot be used without executive governance
- C. Best practice governance enables the organization to control value realization
- D. The Stakeholders preferences may go beyond the architecture project scope and needs control

Answer: C

Explanation:

This statement best supports the need to govern Enterprise Architecture. Best practice governance enables the organization to control value realization by ensuring that architectures are aligned with the enterprise's strategy and objectives, meet the quality and performance requirements, and deliver the expected benefits and outcomes. The Architecture Project does not mandate the governance of the target architecture, but rather follows the governance framework established by the enterprise. The TOGAF standard can be used without executive governance, but it is recommended that executive sponsorship and support are obtained for successful architecture development and transition. The Stakeholders preferences may go beyond the architecture project scope and need control, but this is not the primary reason for governing Enterprise Architecture. Reference: The TOGAF® Standard | The Open Group Website, Section 3.3.6 Architecture Governance.

NEW QUESTION 2

- (Topic 1)

Consider the following statement.

Projects may cycle between ADM phases, in planned cycles covering multiple phases. What does it illustrate?

- A. Requirements management
- B. Iteration
- C. Implementation governance
- D. Enterprise Architecture

Answer: B

Explanation:

The statement "Projects may cycle between ADM phases, in planned cycles covering multiple phases" illustrates the concept of iteration, which is the process of repeating the ADM phases or steps within a phase to refine the architecture outputs and address the changing requirements and stakeholder concerns. Iteration can occur at different levels of granularity and scope, such as within a single phase, across multiple phases, or across the entire ADM cycle. Iteration can also be applied to different architecture domains, such as business, data, application, and technology. Iteration is a key feature of the ADM that enables the development of architectures that are fit for purpose, adaptable, and responsive to change. References: : The TOGAF Standard, Version 9.2, Part III: ADM Guidelines and Techniques, Chapter 24: Applying Iteration to the ADM

NEW QUESTION 3

- (Topic 1)

Complete the sentence. When considering agile development, Architecture to Support Portfolio will identify what products the Enterprise needs, the boundary of the products, and what constraints a product owner has; this defines the Enterprise's

- A. risk tolerance
- B. business continuity
- C. backlog
- D. operating model

Answer: C

Explanation:

When considering agile development, Architecture to Support Portfolio will identify the necessary products for the enterprise, define their boundaries, and outline the constraints for a product owner. This process directly relates to defining the enterprise's backlog, which in agile methodologies, is a prioritized list of work for the development team that is derived from the roadmap and its requirements.

NEW QUESTION 4

- (Topic 1)

Which statement about Requirements Management is most correct?

- A. The purpose of Requirements Management is to process change requests
- B. Stakeholder requirements are captured once in Phase A and managed throughout the ADM cycle
- C. Requirements Management is a step of all ADM Phases
- D. Requirements Management and stakeholder engagement are placed at the center of architecture development

Answer: D

Explanation:

This statement about Requirements Management is most correct because it reflects the central role of Requirements Management and stakeholder engagement in the ADM cycle. Requirements Management is not a step of all ADM Phases, but rather an ongoing process that ensures that all relevant requirements are elicited, analyzed, prioritized, and addressed throughout the architecture development and transition. Stakeholder engagement is also a continuous activity that involves identifying, communicating, and managing stakeholder expectations and concerns. Reference: The TOGAF® Standard | The Open Group Website, Section 3.1 Introduction to the ADM.

NEW QUESTION 5

- (Topic 1)

Consider the following ADM phases objectives.

Objective:

- * 1. Develop the Target Data Architecture that enables the Business Architecture and the Architecture Vision
 - * 2. Develop the Target Business Architecture that describes how the enterprise needs to operate to achieve the business goals
 - * 3. Develop a high-level aspirational vision of the capabilities and business value to be delivered as a result of the proposed Enterprise Architecture
 - * 4. Identify candidate Architecture Roadmap components based upon gaps between the Baseline and Target Technology Architectures
- Which phase does each objective match?

- A. 1B-2D-3A-4C
- B. 1C-2D-3B-4A
- C. 1C-2B-3A-4D
- D. 1A-2B-3C-4D

Answer: C

Explanation:

•Phase A: Architecture Vision

oDevelop a high-level aspirational vision of the capabilities and business value to be delivered as a result of the proposed Enterprise Architecture

oDefine the scope and boundaries of the architecture engagement oIdentify the key stakeholders and their concerns and expectations

oDefine the Architecture Vision statement and the Architecture Definition Document oObtain approval and commitment from the sponsors and stakeholders

•Phase B: Business Architecture

oDevelop the Target Business Architecture that describes how the enterprise needs to operate to achieve the business goals

oDefine the Baseline Business Architecture, if not available

oPerform a gap analysis between the Baseline and Target Business Architectures oDefine candidate roadmap components for the Business Architecture

oResolve impacts across the Architecture Landscape

•Phase C: Information Systems Architecture

oDevelop the Target Data Architecture that enables the Business Architecture and the Architecture Vision

oDevelop the Target Application Architecture that supports the Business Architecture and the Architecture Vision

oDefine the Baseline Data and Application Architectures, if not available oPerform a gap analysis between the Baseline and Target Data and Application Architectures

oDefine candidate roadmap components for the Information Systems Architecture oResolve impacts across the Architecture Landscape

•Phase D: Technology Architecture

oDevelop the Target Technology Architecture that enables the Information Systems Architecture and the Architecture Vision

oDefine the Baseline Technology Architecture, if not available

oPerform a gap analysis between the Baseline and Target Technology Architectures oIdentify candidate Architecture Roadmap components based upon gaps between the

Baseline and Target Technology Architectures oResolve impacts across the Architecture Landscape

Therefore, the correct matching of the objectives and the phases is:

•1C: Develop the Target Data Architecture that enables the Business Architecture and the Architecture Vision

•2B: Develop the Target Business Architecture that describes how the enterprise needs to operate to achieve the business goals

•3A: Develop a high-level aspirational vision of the capabilities and business value to be delivered as a result of the proposed Enterprise Architecture

•4D: Identify candidate Architecture Roadmap components based upon gaps between the Baseline and Target Technology Architectures

References: 1: The TOGAF Architecture Development Method

NEW QUESTION 6

- (Topic 1)

In which phase of the ADM cycle do building blocks become implementation-specific?

- A. Phase B
- B. Phase C
- C. Phase D
- D. Phase E

Answer: D

Explanation:

Building blocks are reusable components of business, IT, or architectural capability that can be combined to deliver architectures and solutions. Building blocks can be defined at various levels of detail, depending on the stage of architecture development. In the earlier phases of the ADM cycle (A to D), building blocks are defined in generic terms, such as logical or physical, to provide a high-level view of the architecture. In Phase E: Opportunities and Solutions, building blocks become implementation-specific, meaning that they are linked to specific products, standards, technologies, and vendors that are available in the market. This phase also identifies the delivery vehicles, such as projects, programs, or portfolios, that will realize the building blocks. References: 1: The TOGAF Standard, Version 9.2, Part II: Architecture Development Method (ADM), Chapter 23: Phase E: Opportunities and Solutions 2: The TOGAF Standard, Version 9.2, Part IV: Architecture Content Framework, Chapter 36: Building Blocks

NEW QUESTION 7

- (Topic 1)

Which phase of the ADM has the purpose to develop an Enterprise Architecture Capability?

- A. Phase G
- B. Preliminary Phase
- C. Phase A
- D. Phase B

Answer: B

Explanation:

According to the TOGAF Standard, 10th Edition, the Preliminary Phase of the Architecture Development Method (ADM) has the purpose to develop an Enterprise Architecture Capability 1. An Enterprise Architecture Capability is the ability of the organization to perform the activities and tasks related to Enterprise Architecture, such as defining the scope, principles, vision, governance, and stakeholders of the architecture. The Preliminary Phase also establishes the architecture framework, the architecture repository, the architecture tools, and the architecture team 1. The other options are not correct, as they have different purposes in the ADM. Phase G: Implementation Governance has the purpose to ensure that the implementation projects conform to the target architecture 2.

Phase A: Architecture Vision has the purpose to define the scope, stakeholders, business drivers, and objectives of the architecture project 3. Phase B: Business Architecture has the purpose to describe the baseline and target business architecture, and to identify the gaps between them . References: 1: TOGAF Standard, 10th Edition, Part II: Architecture Development Method, Chapter 6: Preliminary Phase. 2: TOGAF Standard, 10th Edition, Part II: Architecture Development Method, Chapter 18: Phase G: Implementation Governance. 3: TOGAF Standard, 10th Edition, Part II: Architecture Development Method, Chapter 12: Phase A: Architecture Vision. : TOGAF Standard, 10th Edition, Part II: Architecture Development Method, Chapter 13: Phase B: Business Architecture.

NEW QUESTION 8

- (Topic 1)
Refer to the table below:

Phase	Output & Outcome	Essential Knowledge
?	Completion of the projects to implement the changes necessary to reach the adjusted target state.	Purpose and constraints on the implementation team. (Gap, Architecture Requirement Specification, Control) How stakeholder priority and preference adjust in response to success, value, effort, and risk of change. (Stakeholder Requirements)

Which ADM Phase does this describe?

- A. Phase E
- B. Phase G
- C. Phase A
- D. Phase F

Answer: B

Explanation:

The table describes the output, outcome, and essential knowledge of an ADM phase that oversees the implementation of changes necessary to reach the adjusted target state. This corresponds to Phase G, also known as Implementation Governance, which ensures that the architecture defined in earlier phases is realized, and it oversees the development and implementation of projects to align with this architecture. The essential knowledge required during this phase includes understanding constraints on the implementation team and adjusting stakeholder priority and preference in response to success, value, effort, and risk of change. References: TOGAF Version 9.1 - 1

NEW QUESTION 9

- (Topic 1)
In which part of the ADM cycle do building block gaps become associated with work packages that will address the gaps?

- A. Phases G and H
- B. Phases F
- C. Phases B C and D
- D. Phase E

Answer: D

Explanation:

In Phase E of the ADM cycle, building block gaps become associated with work packages that will address the gaps. This phase involves creating an Implementation and Migration Plan that defines a set of work packages and Transition Architectures that will deliver the Target Architecture. Reference: The TOGAF® Standard | The Open Group Website, Section 3.2.5 Phase E: Opportunities & Solutions.

NEW QUESTION 10

- (Topic 1)
Which of the following best describes the class of information known as the Reference Library within the Architecture Repository?

- A. Guidelines and templates used to create new architectures
- B. Specifications to which architectures must conform
- C. A record of the governance activity across the enterprise
- D. Processes to support governance of the Architecture Repository

Answer: A

Explanation:

The class of information known as the Reference Library within the Architecture Repository contains guidelines and templates used to create new architectures. The Reference Library provides a set of resources that can be leveraged or customized for specific architecture development purposes. It includes generic building blocks, patterns, models, standards, frameworks, methods, techniques, best practices, etc. Reference: The TOGAF® Standard | The Open Group Website, Section 2.4 Architecture Repository.

NEW QUESTION 10

- (Topic 1)

What is presented as ??striking a balance between positive and negative outcomes resulting from the realization of either opportunities or threats?

- A. Agile development
- B. Architecture Security
- C. Transition Management
- D. Risk Management

Answer: D

Explanation:

Risk Management is the process of identifying, assessing, and responding to risks that may affect the achievement of the enterprise??s objectives. Risk Management involves balancing positive and negative outcomes resulting from the realization of either opportunities or threats. Reference: The TOGAF® Standard | The Open Group Website, Section 3.3.3 Risk Management.

NEW QUESTION 11

- (Topic 1)

Which of the following does the TOGAF standard describe as a package of functionality defined to meet business needs across an organization?

- A. An application
- B. A deliverable
- C. A solution architecture
- D. A building block

Answer: D

NEW QUESTION 14

- (Topic 1)

Complete the sentence A business scenario describes _____

- A. shortfalls between the Baseline and Target Architectures
- B. business domain gaps such as cross-training requirements
- C. business and technology environment in which those problems occur
- D. general rules and guidelines tor the architecture being developed

Answer: C

Explanation:

A business scenario describes business and technology environment in which those problems occur. It provides a realistic context for identifying and addressing business problems and opportunities, as well as their impact on the enterprise??s architecture. Reference: The TOGAF® Standard | The Open Group Website, Section 3.3.1 Business Scenarios.

NEW QUESTION 19

- (Topic 1)

Consider the following statements:

- * 1. Groups of countries, governments, or governmental organizations (such as militaries) working together to create common or shareable deliverables or infrastructures
- * 2. Partnerships and alliances of businesses working together, such as a consortium or supply chain

What are those examples of according to the TOGAF Standard?

- A. Enterprises
- B. Organizations
- C. Business Units
- D. Architectures Scopes

Answer: D

Explanation:

According to the TOGAF standard, the two statements provided refer to different scopes within which architecture can be developed:

? Groups of countries, governments, or governmental organizationsworking together typically align with broader, often international, scopes of architecture that transcend individual enterprise boundaries.

? Partnerships and alliances of businessesworking together, such as a consortium or supply chain, refer to collaborative efforts that can define architecture at a scope involving multiple enterprises.

In both cases, the term "Architectures Scopes" is appropriate because it reflects the varying levels and contexts in which architectures can be defined, ranging from single business units to collaborative inter-organizational efforts.

NEW QUESTION 21

- (Topic 1)

What are the four dimensions used to scope an architecture?

- A. Business Data Application Technology
- B. Strategy Segment Capability Budget
- C. Breadth Depth Time Period Architecture Domains
- D. Strategy Portfolio Project Solution Delivery

Answer: C

Explanation:

? The four dimensions used to scope an architecture are Breadth, Depth, Time Period, and Architecture Domains¹, p. 8.
? Breadth refers to the extent of the enterprise covered by the architecture, which can range from a specific business unit to the entire organization¹, p. 8.
? Depth refers to the level of detail and completeness of the architecture, which can vary depending on the purpose, scope, and stakeholders of the architecture¹, p. 8.
? Time Period refers to the temporal aspects of the architecture, such as the current state, the target state, and the transition plan¹, p. 8.
? Architecture Domains refers to the classification of the architecture into four domains: Business, Data, Application, and Technology¹, p. 8.
? These four dimensions help define the scope and boundaries of the architecture and ensure that it meets the needs and expectations of the stakeholders.
References:
? 1: The Open Group (2018). The TOGAF® Standard, Version 9.2. 1

NEW QUESTION 23

- (Topic 1)

Consider the following descriptions of deliverables consumed and produced across the TOGAF ADM cycle.

? General rules and guidelines, intended to be enduring and seldom amended, that inform and support the way in which an organization sets about fulfilling its mission

? The joint agreements between development partners and sponsors on the deliverables, quality, and fitness-for-purpose of an architecture.

? A document that is sent from the sponsoring organization to the architecture organization to trigger the start of an architecture development cycle

? A set of quantitative statements that outline what an implementation project must do in order to comply with the architecture.

Which deliverables match these descriptions?

? 1 Architecture Principles - 2 Architecture Contracts - 3 Request for Architecture Work - 4 Architecture Requirements Specification

? 1 Architecture Contracts - 2 Architecture Requirements Specification - 3 Architecture Vision - 4 Architecture Principles

? 1 Architecture Requirements Specification - 2 Architecture Principles - 3 Architecture Vision - 4 Architecture Contracts

A. 1 Architecture Principles - 2 Architecture Contracts - 3 Architecture Requirements Specification - 4 Request for Architecture Work

Answer: A

Explanation:

According to the TOGAF standard, the deliverables that match the descriptions are as follows:

? 1 Architecture Principles: These are general rules and guidelines, intended to be enduring and seldom amended, that inform and support the way in which an organization sets about fulfilling its mission¹. They reflect a level of consensus among the various elements of the enterprise, and form the basis for making future IT decisions¹.

? 2 Architecture Contracts: These are the joint agreements between development

partners and sponsors on the deliverables, quality, and fitness-for-purpose of an architecture². They are used to ensure that the architecture is implemented and governed according to the agreed-upon specifications and standards².

? 3 Request for Architecture Work: This is a document that is sent from the

sponsoring organization to the architecture organization to trigger the start of an architecture development cycle³. It defines the scope, schedule, budget, deliverables, and stakeholders of the architecture project³.

? 4 Architecture Requirements Specification: This is a set of quantitative statements

that outline what an implementation project must do in order to comply with the architecture⁴. It defines the requirements for each architecture domain, as well as the relationships and dependencies among them⁴.

References: 1: Architecture Principles 2: Architecture Contracts 3: Request for Architecture Work 4: Architecture Requirements Specification

NEW QUESTION 27

- (Topic 1)

What can architects present to stakeholders to extract hidden agendas, principles, and requirements that could impact the final Target Architecture?

A. Solutions and Applications

B. Alternatives and Trade-offs

C. Business Scenarios and Business Models

D. Architecture Views and Architecture Viewpoints

Answer: D

Explanation:

? According to the TOGAF Standard, Version 9.2, an architecture view is a representation of a system from the perspective of a related set of concerns¹. It consists of one or more architecture models that demonstrate how the system addresses the stakeholder concerns¹.

? An architecture viewpoint is a specification of the conventions for constructing and using an architecture view to address specific stakeholder concerns¹. It defines

the perspective, scope, notation, and techniques for creating an architecture view of a system¹.

? Architects can present architecture views and viewpoints to stakeholders to extract

hidden agendas, principles, and requirements that could impact the final Target Architecture, because²³:

References:

? 1: The TOGAF Standard, Version 9.2, Chapter 22: Architecture Views, Viewpoints, and Stakeholders

? 2: The TOGAF Standard, Version 9.2, Chapter 4: Introduction to Part II, Section 4.2: What is an Architecture Framework?

? 3: The TOGAF Standard, Version 9.2, Chapter 31: Architectural Artifacts, Section 31.1: Basic Concepts

NEW QUESTION 31

- (Topic 1)

Which section of the TOGAF template for Architecture Principles should highlight the business benefits of adhering to the principle?

A. Rationale

B. Name

C. Implications

D. Statement

Answer: A

Explanation:

According to the TOGAF Standard, 10th Edition, the rationale section of the architecture principles template should highlight the business benefits of adhering to the principle, as well as the business risks of not adhering to it 1. The rationale section should explain the reasoning behind the principle, and provide evidence or arguments to support it. The rationale sections should also link the principle to the business drivers, goals, and objectives of the enterprise, and show how the principle contributes to the value and success of the enterprise. The other options are not correct, as they have different purposes in the architecture principles template. The name section should provide a short and memorable name for the principle, such as ??Information is an Asset?? or ??Business Continuity?? 1. The statement section should provide a concise and formal statement of the principle, such as ??The enterprise??s information is recognized as a core asset, and is managed accordingly?? or ??The enterprise??s ability to provide critical services and products must be maintained in the event of a disaster?? 1. The implications section should identify the impact of the principle on the enterprise, such as the changes, costs, benefits, and risks that may result from applying or violating the principle 1. References: 1: TOGAF Standard, 10th Edition, Part III: ADM Guidelines and Techniques, Chapter 23: Architecture Principles, Section 23.3 Developing Architecture Principles.

NEW QUESTION 33

- (Topic 1)

What are the following activities part of?

- . Risk classification
- . Risk identification
- . Initial risk assessment

- A. Security Architecture
- B. Phase A
- C. Phase G
- D. Risk Management

Answer: D

Explanation:

Risk management is a generic technique that can be applied across all phases of the Architecture Development Method (ADM), as well as in the Preliminary Phase and the Requirements Management Phase2. Risk management involves the following steps1:

•Risk identification: This step involves identifying the potential risks that may affect the architecture project, such as technical, business, organizational, environmental, or legal risks. The risks can be identified through various sources, such as stakeholder interviews, workshops, surveys, checklists, historical data, or expert judgment.

•Risk classification: This step involves categorizing the risks based on their nature, source, impact, and priority. The risks can be classified according to different criteria, such as time, cost, scope, quality, security, or compliance. The classification helps in prioritizing the risks and allocating resources and efforts to address them effectively.

•Initial risk assessment: This step involves assessing the likelihood and impact of each risk, and determining the initial level of risk. The likelihood is the probability of the risk occurring, and the impact is the severity of the consequences if the risk occurs. The initial level of risk is the product of the likelihood and impact, and it indicates the urgency and importance of

the risk. The initial risk assessment helps in identifying the most critical risks that need immediate attention and mitigation.

References: 1: The TOGAF Standard, Version 9.2 - Risk Management 2: TOGAF ADM: Top 10 techniques – Part 9: Risk Management

NEW QUESTION 37

- (Topic 1)

Complete the sentence. Actions arising from the Business Transformation Readiness Assessment technique should be incorporated in the

- A. Architecture Requirements Specification
- B. Architecture Roadmap
- C. Implementation Governance Model
- D. Implementation and Migration Plan

Answer: D

Explanation:

The Business Transformation Readiness Assessment technique is used to evaluate the readiness of the organization to undergo change and to identify the actions needed to increase the likelihood of a successful business transformation. These actions should be incorporated in the Implementation and Migration Plan, which is the detailed plan to transition from the Baseline Architecture to the Target Architecture. The Implementation and Migration Plan also includes the Transition Architectures, the Architecture Building Blocks, the Work Packages, the Implementation Governance Model, and the Architecture Contract12

References: 1: The TOGAF Standard, Version 9.2, Part III: ADM Guidelines and Techniques, Chapter 27: Business Transformation Readiness Assessment 2: The TOGAF Standard, Version 9.2, Part II: Architecture Development Method (ADM), Chapter 21: Phase F: Migration Planning

NEW QUESTION 39

- (Topic 1)

Complete the sentence The purpose of the Preliminary Phase is to _____.

- A. describe the target architecture
- B. define the enterprise strategy
- C. identify the stakeholders and their requirements
- D. architect an Enterprise Architecture Capability

Answer: D

Explanation:

The purpose of the Preliminary Phase is to architect an Enterprise Architecture Capability that meets the needs and expectations of the enterprise??s stakeholders and supports and enables subsequent phases of architecture development and transition. This phase involves defining the scope, principles, framework, and governance for the Enterprise Architecture Capability. Reference: The TOGAF® Standard | The Open Group Website, Section 3.2 Preliminary Phase.

NEW QUESTION 43

- (Topic 1)

Which of the following describes how the Enterprise Continuum is used when developing an enterprise architecture?

- A. To identify and understand business requirements
- B. To coordinate with the other management frameworks in use
- C. To describe how an architecture addresses stakeholder concerns
- D. To classify architecture and solution assets

Answer: D

Explanation:

The Enterprise Continuum consists of two complementary concepts: the Architecture Continuum and the Solutions Continuum¹. The Architecture Continuum provides a consistent way to describe and understand the generic and reusable architecture building blocks, such as models, patterns, and standards, that can be applied and tailored to specific situations². The Solutions Continuum provides a consistent way to describe and understand the specific and implemented solution building blocks, such as products, services, and components, that realize the architecture building blocks³. The Enterprise Continuum enables the reuse and integration of architecture and solution assets across different levels of abstraction, scope, and detail, ranging from foundation architectures to organization-specific architectures¹.

The Enterprise Continuum is used when developing an enterprise architecture to support the following activities¹:

- Selecting relevant architecture and solution assets from the Architecture Repository or other sources, based on the business drivers, goals, and requirements
- Adapting and customizing the architecture and solution assets to suit the specific needs and context of the enterprise
- Defining and developing the target architecture and the architecture roadmap, based on the gaps and opportunities identified between the baseline and the target states
- Defining and developing the implementation and migration plan, based on the architecture roadmap and the solution building blocks
- Governing and managing the architecture and solution assets throughout the architecture lifecycle, ensuring their quality, consistency, and compliance

References: 1: The TOGAF Standard, Version 9.2 - Enterprise Continuum 2: The TOGAF Standard, Version 9.2 - Architecture Continuum 3: The TOGAF Standard, Version 9.2 - Solutions Continuum

NEW QUESTION 46

- (Topic 1)

Exhibit:

Consider the image showing basic architectural concepts. What are items A and B?

- A. A-Candidate Architecture, B-Trade-off
- B. A-User, B-Requirement
- C. A-Stakeholder, B-Concern
- D. A-Base Architecture, B-Target Architecture

Answer: C

Explanation:

In the context of TOGAF, a stakeholder is any individual, team, or organization who has interests in, or concerns relative to, the outcome of the architecture. Concerns are those interests which pertain to any aspect of the system's functioning, development or operation, including considerations such as performance, reliability, and security¹. References:

- The TOGAF Standard, Version 9.2 - Definitions - The Open Group

NEW QUESTION 51

- (Topic 1)

Which of the following is a responsibility of an Architecture Board?

- A. Conducting assessments of the maturity level of architecture discipline within the organization
- B. Allocating resources for architecture projects
- C. Creating the Statement of Architecture Work
- D. Establishing targets for re-use of components

Answer: D

Explanation:

? An Architecture Board is an executive-level group responsible for the review and maintenance of the strategic architecture and all of its sub-architectures¹. It is a key element in a successful Architecture Governance strategy².

? An Architecture Board is typically made responsible, and accountable, for achieving some or all of the following goals²:

? Therefore, the correct answer is option D, which captures one of the goals of an Architecture Board as stated in the TOGAF Standard, Version 9.22.

? Option A is incorrect, because conducting assessments of the maturity level of architecture discipline within the organization is not a direct responsibility of an Architecture Board, but rather a part of the Architecture Capability Framework³.

? Option B is incorrect, because allocating resources for architecture projects is not a direct responsibility of an Architecture Board, but rather a part of the Architecture Governance Framework⁴.

? Option C is incorrect, because creating the Statement of Architecture Work is not a direct responsibility of an Architecture Board, but rather a part of the Architecture Development Method⁵. References:

? 1: Architecture Board - The Open Group³

? 2: TOGAF Standard, Version 9.2 - Part VI: Architecture Governance Framework - Architecture Board

? 3: TOGAF Standard, Version 9.2 - Part VI: Architecture Governance Framework - Architecture Capability Framework

? 4: TOGAF Standard, Version 9.2 - Part VI: Architecture Governance Framework - Architecture Governance Framework

? 5: TOGAF Standard, Version 9.2 - Part II: Architecture Development Method - Phase A: Architecture Vision

NEW QUESTION 54

- (Topic 1)

Consider the following statements:

- * 1. Each contracted party is required to act responsibly to the organization and its stakeholders.
- * 2. All decisions taken, processes used, and their implementation will not be allowed to create unfair advantage to any one particular party.
- * 3. Digital Transformation and operations will be more effective and efficient.
- * 4. Strategic decision-making by C-Level executives and business leaders will be more effective.

Which statements highlight the value and necessity for Architecture Governance to be adopted within organizations?

- A. 1 & 2
- B. 2 & 3
- C. 3 & 4
- D. 1 & 4

Answer: A

Explanation:

Architecture governance is the practice of ensuring compliance with the enterprise architecture and its principles, standards, and goals. Architecture governance provides the means to establish, monitor, and control the architecture development and implementation processes, and to resolve any issues or conflicts that may arise. Architecture governance also ensures that all stakeholders are represented and involved in the decision-making process, and that their interests and concerns are balanced and aligned. Statements 1 and 2 highlight the value and necessity for architecture governance to be adopted within organizations, as they emphasize the importance of responsibility, accountability, fairness, and transparency in the architectural activities. Statements 3 and 4 are more related to the benefits and outcomes of having a good enterprise architecture, rather than the governance aspect. References: : The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 50: Architecture Governance : The TOGAF Standard, Version 9.2, Part III: ADM Guidelines and Techniques, Chapter 29: Architecture Governance

NEW QUESTION 59

- (Topic 1)

Complete the sentence. The four purposes that typically frame the planning horizon, depth and breadth of an Architecture Project, and the contents of the EA Repository are Strategy, Portfolio,

- A. Project, and Solution Delivery.
- B. Subordinate, and Superior Architecture.
- C. Discreet, and Cohesive.
- D. Segment, and End-to-end Target Architecture.

Answer: D

Explanation:

The planning horizon, depth, and breadth of an Architecture Project, along with the contents of the EA Repository, are typically framed by Strategy, Portfolio, Segment, and End-to-end Target Architecture. The 'Segment' refers to a part of the organization, typically addressed in a Segment Architecture, while 'End-to-end Target Architecture' encompasses the complete view of the planned architecture across the entire organization.

NEW QUESTION 63

- (Topic 1)

When considering the scope of an architecture, what dimension considers to what level of detail the architecting effort should go?

- A. Project
- B. Breadth
- C. Depth
- D. Architecture Domains

Answer: C

Explanation:

The scope of an architecture is the extent and level of detail of the architecture work. The scope of an architecture can be defined along four dimensions: project, breadth, depth, and architecture domains. The project dimension considers the boundaries and objectives of the architecture project, such as the time frame, budget, resources, and deliverables. The breadth dimension considers the coverage and completeness of the architecture across the enterprise, such as the organizational units, business functions, processes, and locations. The depth dimension considers the level of detail and specificity of the architecture, such as the granularity, abstraction, and precision of the architectural elements and relationships. The architecture domains dimension considers the aspects or segments of the architecture, such as the business, data, application, and technology domains.

Therefore, the depth dimension is the one that considers to what level of detail the architecting effort should go.

References: : The TOGAF Standard, Version 9.2, Part III: ADM Guidelines and Techniques, Chapter 25: Architecture Scope : The TOGAF Standard, Version 9.2, Part III: ADM Guidelines and Techniques, Chapter 25.2: Scope Dimensions : The TOGAF Standard, Version 9.2, Part III: ADM Guidelines and Techniques, Chapter 25.2.1: Project, Breadth, Depth, and Architecture Domains

NEW QUESTION 67

- (Topic 2)

Please read this scenario prior to answering the question

Your role is that of a senior architect, reporting to the Chief Enterprise Architect, at a medium-sized company with 400 employees. The nature of the business is such that the data and the information stored on the company systems is their major asset and is highly confidential.

The company employees travel extensively for work and must communicate over public infrastructure using message encryption, VPNs, and other standard safeguards. The company has invested in cybersecurity awareness training for all its staff. However, it is recognized that even with good education as well as system security, there is a dependency on third-party suppliers of infrastructure and software.

The company uses the TOGAF standard as the method and guiding framework for its Enterprise Architecture (EA) practice. The CTO is the sponsor of the activity.

The Chief Security Officer (CSO) has noted an increase in ransomware (malicious software used in ransom demands) attacks on companies with a similar profile.

The CSO recognizes that no matter how much is spent on education, and support, it is likely just a matter of time before the company suffers a significant attack that could completely lock them out of their information assets.

A risk assessment has been done and the company has sought cyber insurance that includes ransomware coverage. The quotation for this insurance is hugely expensive. The CTO has recently read a survey that stated that one in four organizations paying ransoms were still unable to recover their data, while nearly as many were able to recover the data without paying a ransom. The CTO has concluded that taking out cyber insurance in case they need to pay a ransom is not an option.

Refer to the scenario

You have been asked to describe the steps you would take to improve the resilience of the current architecture?

Based on the TOGAF standard which of the following is the best answer?

- A. You would determine business continuity requirements, and undertake a gap analysis of the current Enterprise Architecture
- B. You would make recommendations for change requirements to address the situation and create a change request
- C. You would manage a meeting of the Architecture Board to assess and approve the change request
- D. Once approved you would produce a new Request for Architecture Work to activate an ADM cycle to carry out a project to define the change.
- E. You would monitor for technology changes from your existing suppliers that could improve resilience
- F. You would prepare and run a disaster recovery planning exercise for a ransomware attack and analyze the performance of the current Enterprise Architecture
- G. Using the findings, you would prepare a gap analysis of the current Enterprise Architecture
- H. You would prepare change requests to address identified gap
- I. You would add the changes implemented to the Architecture Repository.
- J. You would ensure that the company has in place up-to-date processes for managing change to the current Enterprise Architecture
- K. Based on the scope of the concerns raised you recommend that this be managed at the infrastructure level
- L. Changes should be made to the baseline description of the Technology Architecture
- M. The changes should be approved by the Architecture Board and implemented by change management techniques.
- N. You would request an Architecture Compliance Review with the scope to examine the company's resilience to ransomware attack
- O. You would identify the departments involved and have them nominate representative
- P. You would then tailor checklists to address the requirement for increased resilience
- Q. You would circulate to the nominated representatives for them to complete
- R. You would then review the completed checklists, identifying and resolving issues
- S. You would then determine and present your recommendations.

Answer: A

Explanation:

Business continuity is the ability of an organization to maintain essential functions during and after a disaster or disruption. Business continuity requirements are the specifications and criteria that define the acceptable level of performance and availability of the business processes and services in the event of a disaster or disruption. A gap analysis is a technique that compares the current state of the architecture with the desired state, and identifies the gaps or differences that need to be addressed. A change request is a formal proposal for an amendment to some product or system, such as the architecture. A Request for Architecture Work is a document that describes the scope, approach, and expected outcomes of an architecture project¹²³

The best answer is A, because it describes the steps that would improve the resilience of the current architecture, which is the ability to withstand and recover from a ransomware attack or any other disruption. The steps are:

? Determine the business continuity requirements, which specify the minimum acceptable level of performance and availability of the business processes and services in case of a ransomware attack. This would involve identifying the critical business functions, the recovery time objectives, the recovery point objectives, and the dependencies and resources needed for recovery.

? Undertake a gap analysis of the current Enterprise Architecture, which compares the current state of the architecture with the desired state based on the business continuity requirements. This would involve assessing the strengths and weaknesses of the current architecture, the risks and opportunities for improvement, and the gaps or differences that need to be addressed.

? Make recommendations for change requirements to address the situation and create a change request. This would involve proposing solutions and alternatives to close the gaps, enhance the resilience, and mitigate the risks of the current architecture. The change request would document the rationale, scope, impact, and benefits of the proposed changes, and seek approval from the relevant stakeholders.

? Manage a meeting of the Architecture Board to assess and approve the change request. The Architecture Board is a governance body that oversees the architecture work and ensures compliance with the architecture principles, standards, and goals. The meeting would involve presenting the change request, discussing the pros and cons, resolving any issues or conflicts, and obtaining the approval or rejection of the change request.

? Once approved, produce a new Request for Architecture Work to activate an ADM cycle to carry out a project to define the change. The Request for Architecture

Work would describe the scope, approach, and expected outcomes of the architecture project that would implement the approved change request. The Request for Architecture Work would initiate a new cycle of the Architecture Development Method (ADM), which is the core process of the TOGAF standard that guides the development and management of the enterprise architecture.

NEW QUESTION 72

- (Topic 2)

Please read this scenario prior to answering the question

You have been appointed as senior architect working for an autonomous driving technology development company. The mission of the company is to build an industry leading unified technology and software platform to support connected cars and autonomous driving.

The company uses the TOGAF Standard as the basis for its Enterprise Architecture (EA) framework. Architecture development within the company follows the purpose-based EA Capability model as described in the TOGAF Series Guide: A Practitioners' Approach to Developing Enterprise Architecture Following the TOGAF® ADM.

An architecture to support strategy has been completed defining a long-range Target Architecture with a roadmap spanning five years. This has identified the need for a portfolio of projects over the next two years. The portfolio includes development of travel assistance systems using swarm data from vehicles on the road. The current phase of architecture development is focused on the Business Architecture which needs to support the core travel assistance services that the company plans to provide. The core services will manage and process the swarm data generated by vehicles, paving the way for autonomous driving in the future. The presentation and access to different variations of data that the company plans to offer through its platform poses an architecture challenge. The application portfolio needs to interact securely with various third-party cloud services, and V2X (Vehicle-to-Everything) service providers in many countries to be able to manage the data at scale. The security of V2X is a key concern for the stakeholders. Regulators have stated that the user's privacy be always protected, for example, so that the drivers' journey cannot be tracked or reconstructed by compiling data sent or received by the car.

Refer to the scenario

You have been asked to describe the risk and security considerations you would include in the current phase of the architecture development?

Based on the TOGAF standard which of the following is the best answer?

- A. You will focus on the relationship with the third parties required for the travel assistance systems and define a trust framework
- B. This will describe the relationship with each part
- C. Digital certificates are a key part of the framework and will be used to create trust between parties
- D. You will monitor legal and regulatory changes across all the countries to keep the trust framework in compliance.
- E. You will perform a qualitative risk assessment for the data assets exchanged with partner
- F. This will deliver a set of priorities, high to medium to low, based on identified threats, the likelihood of occurrence, and the impact if it did occur
- G. Using the priorities, you would then develop a Business Risk Model which will detail the risk strategy including classifications to determine what mitigation is enough.
- H. You will focus on data quality as it is a key factor in risk management
- I. You will identify the datasets that need to be safeguarded
- J. For each dataset, you will assign ownership and responsibility for the quality of data need
- K. A security classification will be defined and applied to each dataset
- L. The dataset owner will then be able to authorize processes that are trusted for a certain activity on the dataset under certain circumstances.
- M. You will create a security domain model so that assets with the same level can be managed under one security policy
- N. Since data is being shared across partners, you will establish a security federation to include the
- O. This would include contractual arrangements, and a definition of the responsibility areas for the data exchanged, as well as security implications
- P. You would undertake a risk assessment determining risks relevant to specific data assets.

Answer: D

Explanation:

A security domain model is a technique that can be used to define the security requirements and policies for the architecture. A security domain is a grouping of assets that share a common level of security and trust. A security policy is a set of rules and procedures that govern the access and protection of the assets within a security domain. A security domain model can help to identify the security domains, the assets within each domain, the security policies for each domain, and the relationships and dependencies between the domains¹

Since the data is being shared across partners, a security federation is needed to establish a trust relationship and a common security framework among the different parties. A security federation is a collection of security domains that have agreed to interoperate under a set of shared security policies and standards. A security federation can enable secure data exchange and collaboration across organizational boundaries, while preserving the autonomy and privacy of each party. A security federation requires contractual arrangements, and a definition of the responsibility areas for the data exchanged, as well as security implications²

A risk assessment is a process that identifies, analyzes, and evaluates the risks that may affect the architecture. A risk assessment can help to determine the likelihood and impact of the threats and vulnerabilities that may compromise the security and privacy of the data assets. A risk assessment can also help to prioritize and mitigate the risks, and to monitor and review the risk situation³

Therefore, the best answer is D, because it describes the risk and security considerations that would be included in the current phase of the architecture development, which is focused on the Business Architecture. The answer covers the security domain model, the security federation, and the risk assessment techniques that are relevant to the scenario. References: 1: The TOGAF Standard, Version 9.2, Part III: ADM Guidelines and Techniques, Chapter 35: Security Architecture and the ADM 2: The TOGAF Standard, Version 9.2, Part IV: Architecture Content Framework, Chapter 38: Security Architecture 3: The TOGAF Standard, Version 9.2, Part III: ADM Guidelines and Techniques, Chapter 32: Risk Management

NEW QUESTION 73

- (Topic 2)

Please read this scenario prior to answering the question

You are the Chief Enterprise Architect at a large food service company specializing in sales to trade and wholesale, for example, restaurants and other food retailers.

One of your company's competitors has launched a revolutionary product range and is running a very aggressive marketing campaign. Your company's resellers are successively announcing that they are not interested in your company's products and will sell your competitor's.

The CEO has stated there must be significant change to address the situation. He has made it clear that new markets must be found for the company's products, and that the business needs to pivot, and address the retail market as well as the existing wholesale market.

A consideration is the company's ability and willingness to change its business model, and if it is a temporary or permanent change. An additional risk factor is one

of culture. The company has been used to a stable business with a reasonably well known and settled client base - all with its own local understandings and practices.

The CEO is the sponsor of the EA program within the company. You have been engaged with the sales, logistics, production, and marketing teams, enabling the architecture activity to start. An Architecture Vision, Architecture Principles, and Requirements have all been agreed. As you move forward to develop a possible Target Architecture you have identified that some of the key stakeholders' preferences are incompatible. The incompatibilities are focused primarily on time-to-market, cost savings, and the need to bring out a fully featured product range, but there are additional factors.

Refer to the scenario

You have been asked how you will address the incompatibilities between key stakeholder preferences.

Based on the TOGAF standard which of the following is the best answer?

- A. You would seek to understand value preferences and priorities of the stakeholder
- B. You would develop alternative Target Architectures, highlighting the gaps between current state and the alternative
- C. You would consider combining features from one or more alternatives in collaboration with the stakeholder
- D. A formal stakeholder review should then be held to decide which alternative is fit for purpose and should be moved forward with
- E. You will then secure the funding required.
- F. You recommend that since the CEO has stated that the company must pivot, it is better to compromise on a full product range rather than time-to-market
- G. You would develop just enough of the Target Architecture to demonstrate fitness of the proposed approach
- H. You would limit the description to just where there is a gap between the current baseline
- I. You would seek approval by the stakeholders to move forward with developing the Target Architecture in detail.
- J. You would use the Architecture Vision, Principles, and Requirements to define a set of criteria for alternatives and create a set of architecture views to illustrate the impact of the alternative Target Architecture
- K. You would identify the impact on planned project
- L. You would understand the strengths and weaknesses of the alternative
- M. You would conduct a formal stakeholder review to decide which alternative to move forward with
- N. You will determine the funding required.
- O. You would review the Stakeholder Map and ensure that you have addressed and represented the concerns of all department heads
- P. You will involve them in resolving the incompatibilities
- Q. The Communications Plan should include a report that summarizes the key features of the architecture with and how incompatibilities were resolved to reflect the stakeholders' requirements. You will check with each key stakeholder they are satisfied with how the incompatibilities have been resolved.

Answer: C

Explanation:

According to the TOGAF standard, the Target Architecture is the description of a future state of the architecture being developed for an organization. It should be aligned with the Architecture Vision, Principles, and Requirements that have been agreed with the stakeholders. To address the incompatibilities between key stakeholder preferences, the TOGAF standard recommends creating and evaluating multiple alternative Target Architectures that meet different sets of criteria. These criteria should reflect the value preferences and priorities of the stakeholders, as well as the business drivers and objectives. The alternative Target Architectures should be illustrated using a set of architecture views that show the impact of each alternative on the business, data, application, and technology domains. The impact on planned projects should also be identified and analyzed. The strengths and weaknesses of each alternative should be understood and documented. A formal stakeholder review should then be conducted to decide which alternative is the most fit for purpose and should be moved forward with. The funding required for implementing the chosen alternative should also be determined and secured. References:

NEW QUESTION 75

- (Topic 2)

Please read this scenario prior to answering the question

You are the Lead Enterprise Architect at a major agribusiness company. The company's main annual harvest is lentils, a highly valued food grown worldwide. The lentil parasite, broomrape, has been an increasing concern for many years and is now becoming resistant to chemical controls. In addition, changes in climate favor the propagation and growth of the parasite.

As a result, the parasite cannot realistically be exterminated, and it has become pandemic, with lentil yields falling globally.

The CEO appreciates the seriousness of the situation and has set out a change in direction that is effectively a new business for the company. There are opportunities for new products, and new markets. The company will use the fields for another harvest and will cease to process third-party lentils. Thus, the target market will change, and the end-products will be different and more varied. This is a major decision and the CEO has stated a desire to repurpose rather than replace so as to manage the risks and limit the costs.

The company has a mature Enterprise Architecture practice based in its headquarters and uses the TOGAF standard as the method and guiding framework. The practice has an established Architecture Capability, and uses iteration for architecture development. The CIO is the sponsor of the activity.

The CIO has assigned the Enterprise Architecture team to this activity. At this stage there is no shared vision, or requirements. Refer to the scenario

You have been asked to propose the best approach for architecture development to realize the CEO's change in direction for the company.

Based on the TOGAF standard which of the following is the best answer?

- A. You propose that the team focus on architecture definition, with emphasis on defining the change parameters to support this new business strategy that the CEO has identified
- B. Once understood, the team will be in the best position to identify the requirements, drivers, issues, and constraints for the change
- C. You would ensure that the architecture development addresses non-functional requirements to assure that the target architecture is robust and secure.
- D. You propose that this engagement define the baseline Technology Architecture first in order to assess the current infrastructure capacity and capability for the company
- E. Then the focus should be on transition planning and incremental architecture deployment. This will identify requirements to ensure that the projects are sequenced in an optimal fashion so as to realize the change.
- F. You propose that the priority is to understand and bring structure to the definition of the change
- G. The team should focus iteration cycles on a baseline first approach to architecture development, and then transition planning

- H. This will identify what needs to change in order to transition from the baseline to the target, and can be used to work out in detail what the shared vision is for the change.
- I. You propose that the team focus its iteration cycles on architecture development by going through the architecture definition phases (B-D) with a baseline first approach.
- J. This will support the change in direction as stated by the CEO.
- K. It will ensure that the change can be defined in a structured manner and address the requirements needed to realize the change.

Answer: C

Explanation:

Based on the TOGAF standard, this answer is the best approach for architecture development to realize the CEO's change in direction for the company. The reason is as follows:

? The scenario describes a major business transformation that requires a clear understanding of the current and future states of the enterprise, as well as the gaps and opportunities for change. Therefore, the priority is to understand and bring structure to the definition of the change, rather than focusing on the implementation details or the technology aspects.

? The team should use the TOGAF ADM as the method and guiding framework for architecture development, and adapt it to suit the specific needs and context of the enterprise. The team should also leverage the existing Architecture Capability and the Architecture Repository to reuse and integrate relevant architecture assets and resources.

? The team should focus iteration cycles on a baseline first approach to architecture development, which means starting with the definition of the Baseline Architecture in each domain (Business, Data, Application, and Technology), and then defining the Target Architecture in each domain. This will help to identify the current and desired states of the enterprise, and to perform a gap analysis to determine what needs to change in order to achieve the business goals and objectives.

? The team should then focus on transition planning, which involves identifying and prioritizing the work packages, projects, and activities that will deliver the change. The team should also create an Architecture Roadmap and an Implementation and Migration Plan that will guide the execution and governance of the change.

? The team should use the Architecture Vision phase and the Requirements Management phase to work out in detail what the shared vision is for the change, and to capture and validate the stakeholder requirements and expectations. The team should also use the Architecture Governance framework to ensure the quality, consistency, and compliance of the architecture work.
