What information can be updated in the Master PM application for an associated Preventive Maintenance record (PM)?

- A. Work Order Status
- B. PM Forecast
- C. Generate Work Orders
- D. PM Hierarchy

Answer: D

Explanation:

In IBM Maximo Manage v8.0, the Master PM application is used to manage and control multiple Preventive Maintenance (PM) records through a central template known as the Master PM. The primary purpose of the Master PM application is to provide a standardized structure for PMs and streamline the maintenance process by enabling centralized updates to associated PM records.

The key updates that can be made to associated PMs through the Master PM application include:

? Frequency and Scheduling Information - The Master PM can dictate the time- or

meter-based frequency at which work orders are generated, and apply this to all associated PMs (or selectively if desired)

? Job Plans and Sequence - Users can specify job plans on a sequential basis, which helps in scheduling varied levels of maintenance activities. Changes to the job plan sequence in the Master PM can be propagated to all associated PMs

? Seasonal Dates - Active dates or seasonal adjustments to maintenance activities can be set up within the Master PM, and these adjustments can be transferred to associated PMs as necessary

? PM Hierarchy - The Master PM application allows users to configure and manage PM hierarchies, which helps in establishing parent-child relationships among PM

records. This hierarchical structure is especially useful in organizing maintenance tasks for complex assets with interrelated components, ensuring that all relevant maintenance tasks are triggered appropriately

Thus, option D (PM Hierarchy) correctly represents the feature that can be updated in the Master PM application for associated PM records.
