

## 70-480 Dumps

# Programming in HTML5 with JavaScript and CSS3

<https://www.certleader.com/70-480-dumps.html>

**NEW QUESTION 1**

## DRAG DROP

You are developing a form that captures a user's email address by using HTML5 and jQuery.

The form must capture the email address and return it as a query string parameter. The query string parameter must display the @ symbol that is used in the email address.

You need to implement this functionality.

How should you develop the form? (To answer, drag the appropriate code segment to the correct target or targets in the answer area)

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

\* The `serialize()` method creates a URL encoded text string by serializing form values.

You can select one or more form elements (like input and/or text area), or the form element itself. The serialized values can be used in the URL query string when making an AJAX request.

Example: `$("#form").serialize();`

\* `decodeURIComponent`

The `decodeURIComponent()` function decodes a URI component. Return Value: A String, representing the decoded URI

Incorrect:

Not `decodeURI`:

`decodeURI` is intended for use on the full URI.

`decodeURIComponent` is intended to be used on .. well .. URI components that is any part that lies

between separators (`;/?:@&+,$,#`).

Reference: jQuery `serialize()` Method [http://www.w3schools.com/jquery/ajax\\_serialize.asp](http://www.w3schools.com/jquery/ajax_serialize.asp) [http://www.w3schools.com/jsref/jsref\\_encodeuri.asp](http://www.w3schools.com/jsref/jsref_encodeuri.asp)

**NEW QUESTION 2**

You are developing a customer web form that includes the following HTML.

```
<label id="txtValue"X/label>
```

Information from the web form is submitted to a web service. The web service returns the following JSON object.

```
{  
  "Confirmation": "1234", "FirstName": "John"  
}
```

You need to display the Confirmation number from the JSON response in the `txtValue` label field.

Which JavaScript code segment should you use?

- A. `$("#txtValue").val = (JSONObject.Confirmation);`
- B. `$("#txtValue").val (JSONObject.Confirmation);`
- C. `$("#txtValue").text = (JSONObject.Confirmation);`
- D. `$("#txtValue").text (JSONObject.Confirmation);`

**Answer:** D

**Explanation:**

Incorrect:

not A, not B: A label object has no value attribute. Reference:

<http://api.jquery.com/text/>

**NEW QUESTION 3**

You are creating a web form that users will use to enter their personal information. The form includes the following HTML.

```
<body>
  <table>
    <tr>
      <td>Item</td>
      <td>Input</td>
      <td>Current</td>
    </tr>
    <tr>
      <td>First Name</td>
      <td>
        <input type="text" />
      </td>
      <td></td>
    </tr>
    <tr>
      <td>Last Name</td>
      <td>
        <input type="text" />
      </td>
      <td></td>
    </tr>
  </table>
</body>
```

You have the following requirements:

When a user enters an input box, the cell on the right must turn green. When a user leaves an input box, the cell on the right must turn white. You need to create the web form to meet these requirements.

Which code segment should you use? nth-child

```

C A. $(document).ready(function () {
    $('table td: nth-child(2) input').focus(
        function () {
            $(this).parent().next().css
                ("background-color", "#00FF00");
        });
    $('table td: nth-child(2) input').blur(
        function () {
            $(this).parent().next().css
                ("background-color", "#FFFFFF");
        });
});

```

```

C B. $(document).ready(function () {
    $('table td: eq(2) input').focus(
        function () {
            $(this).parent().parent().next().css
                ("background-color", "#00FF00");
        });
    $('table td: eq(2) input').blur(
        function () {
            $(this).parent().parent().next().css
                ("background-color", "#FFFFFF");
        });
});

```

```

C C. $(document).ready(function () {
    $('table td: eq(2) input').focus(
        function () {
            $(this).parent().next().css
                ("background-color", "#00FF00");
        });
    $('table td: eq(2) input').blur(
        function () {
            $(this).parent().next().css
                ("background-color", "#FFFFFF");
        });
});

```

```

C D. $(document).ready(function () {
    $('table td: nth-child(2) input').focus(
        function () {
            $(this).parent().parent().next().css
                ("background-color", "#00FF00");
        });
    $('table td: nth-child(2) input').blur(
        function () {
            $(this).parent().parent().next().css
                ("background-color", "#FFFFFF");
        });
});

```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

**Answer:** A

**Explanation:**

\* The :nth-child(n) selector matches every element that is the nth child, regardless of type, of its parent. n can be a number, a keyword, or a formula. Example

Specify a background color for every <p> element that is the second child of its parent: p:nth-child(2) { background: #ff0000;

}

\* parent.next()

Here: the cell to the right of the current cell. Reference: CSS3 :nth-child() Selector

**NEW QUESTION 4**

You are styling a box object on a page by using CSS3. You need to set the transparency of the object to 50%. Which two CSS3 styles will achieve the goal? (Each correct answer presents a complete solution. Choose two.)

- A. 

```
.Box {
    background: rgb(255,0,0);
    backface-visibility: hidden;
}
```
- B. 

```
.Box {
    background: rgb(255,0,0);
    background: rgba(255,0,0,.5);
}
```
- C. 

```
.Box {
    background: rgb(255,0,0);
    opacity: 0.5;
}
```
- D. 

```
.Box {
    background: rgb(255,0,0);
    background-color: #fff;
}
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

**Answer:** BC

**Explanation:**

The RGBA declaration allows you to set opacity (via the Alpha channel) as part of the color value. Example:

```
div { background-color: rgba(255,0,0,0.5); }
```

The background color has been set to blue, and the opacity set to half. Example 2:

```
background-color: rgb(0,0,255); opacity: 0.5;
```

The background color has been set to blue, and the opacity set to half. Reference: A brief introduction to Opacity and RGBA <http://www.css3.info/introduction-opacity-rgba/>

**NEW QUESTION 5**

**DRAG DROP**

You are developing a web page that will be accessed from various types of devices. You have the following requirements:

The appropriate display resolution must be selected dynamically based on the device that is connecting to the page.

Mobile devices with a maximum width of 480 pixels must be able to use the page. You need to ensure that the page displays correctly on any device.

How should you build the code? (To answer, drag the appropriate media statement to the correct location. Each media statement may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

screen and (min-width:200px) and (max-width:480px)

size and (min-width:200px) and (max-width:480px)

screen and (min-width:480px)

size and (min-width:480px)

```
@media [redacted]
{
    #navbar {
        float: none;
        width: 200px;
    }
}
@media [redacted]
{
    #navbar {
        float: left;
        width: 500px;
    }
}
```

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

\* The @media rule is used to define different style rules for different media types/devices. CSS Syntax @media not|only mediatype and (media feature) { CSS-Code; }  
 \* Media type: Screen  
 Used for computer screens. Incorrect:  
 Not size: there is no media type size.  
 Reference: CSS3 @media Rule; CSS Media Types

**NEW QUESTION 6**

You are developing an HTML5 page. The page includes the following code.

```
<p id="outer" style="position:relative">
  <p id="inner"></p>
</p>
```

The inner paragraph must be exactly 15 pixels from the top left corner of the outer paragraph. You set the left style for the inner paragraph to the appropriate value.

You need to set the position property of the inner paragraph. Which value should you use?

- A. absolute
- B. static
- C. fixed
- D. relative

**Answer:** A

**Explanation:**

absolute: The element is positioned relative to its first positioned (not static) ancestor element. Incorrect:  
 Not D:  
 relative: The element is positioned relative to its normal position, so "left:20" adds 20 pixels to the element's LEFT position.  
 Reference: CSS position Property [http://www.w3schools.com/cssref/pr\\_class\\_position.asp](http://www.w3schools.com/cssref/pr_class_position.asp)

**NEW QUESTION 7**

You are developing a customer web form that includes following HTML.

```
<input id="txtValue"/>
```

You need to develop the form so that customers can enter only a valid country code consisting of three English alphabet characters.

Which code segment should you use?

- A. 

```
function validate() {
  var name = $("#txtValue").text();
  if (name == null || name == "")
    alert("please enter valid value");
  return;
}
```
- B. 

```
function validate() {
  var value = $("#txtValue").text();
  var regex = /^[d\,\.\]*$/;
  if (!regex.test(value) || name == "")
    alert("please enter valid value");
  return;
}
```
- C. 

```
function validate() {
  var value = $("#txtValue").val();
  var regex = /^[A-Za-z]{3}/;
  if (!regex.test(value) || value == "")
    alert("please enter valid value");
  return;
}
```
- D. 

```
function validate() {
  var name = $("#txtValue").val();
  if (name == null || name == "")
    alert("please enter valid value");
  return;
}
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

**Answer: C**

**Explanation:**

\* The val() method returns or sets the value attribute of the selected elements.

\* HTML <input> pattern Attribute

The pattern attribute specifies a regular expression that the <input> element's value is checked against.

Example

An HTML form with an input field that can contain only three letters (no numbers or special characters):

```
<form action="demo_form.asp">
```

```
Country code: <input type="text" name="country_code" pattern="[A-Za-z]{3}" title="Three letter country code">
```

```
<input type="submit">
```

```
</form>
```

Reference: HTML <input> pattern Attribute [http://www.w3schools.com/tags/att\\_input\\_pattern.asp](http://www.w3schools.com/tags/att_input_pattern.asp)

**NEW QUESTION 8**

DRAG DROP

You are developing an application that reads information from a file. The application must:

Execute a block of code if there is an error accessing the file

Execute a second block of code whether or not there is an error accessing the file You need to ensure that the error handling requirements are met.

Which three statements should you implement in sequence? (To answer, move the appropriate statements from the list of actions to the answer area and arrange them in the correct order.)

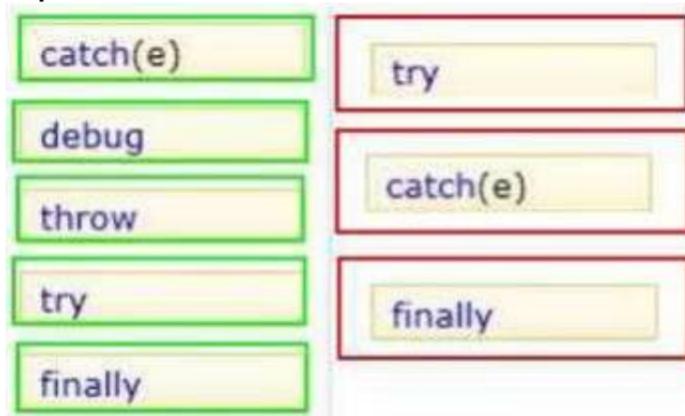

catch(e)	
debug	
throw	
try	
finally	

A. Mastered

B. Not Mastered

**Answer:** A

**Explanation:**

Explanation

The fileopen statement is put within the try clause. The catch(e) will catch a fileopen error.

The finally clause will be executed regardless of whether an error occurs in the try clause proceeding it

**NEW QUESTION 9**

You are creating a JavaScript function to display the current version of a web application You declare a button as follows.

<input type="button" id="About" value="About" />

You need to create an event handler for the button by using an anonymous function. Which code segment should you use?

- A. 

```
var button = document.getElementById("About");
button.addEventListener('click', function { alert("Version 2.1.0") } );
```
- B. 

```
var button = document.getElementById("About");
button.addEventListener('click', function (alert("Version 2.1.0") ) );
```
- C. 

```
var button = document.getElementById("About");
button.addEventListener('click', function () { alert("Version 2.1.0") } );
```
- D. 

```
var button = document.getElementById("About");
button.addEventListener('click', alert("Version 2.1.0") );
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

**Answer:** C

**Explanation:**

Example

When passing parameter values, use an "anonymous function" that calls the specified function with the parameters:

```
document.addEventListener("click", function() { myFunction(p1, p2);
});
```

Reference: HTML DOM addEventListener() Method

**NEW QUESTION 10**

DRAG DROP

You are creating a web worker for an HTML5 application.

The following tasks must be performed from within the web worker: Register an event listener for the web worker

Start and stop the web worker

You need to define a function that performs the required tasks.

Which line of code should you use? (To answer, drag the appropriate line or lines of code to the correct location or locations. Each line of code may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

```
self.postMessage('Worker: ' + data);
self.addEventListener('message', function(event));
self.attachEvent('Worker', data);
self.terminate();
self.close();
```

```
var data = event.data;
switch (data.cmd) {
  case 'start':
    break;
  case 'stop':
    break;
  default:
    self.postMessage('Try again: ' + data.msg);
};
}, false);
```

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

\* addEventListener

The addEventListener() method attaches an event handler to the specified element.

In context of a worker, both self and this refer to the global scope. The worker can either add an event listener for the message event, or it can define the onmessage handler to listen for any messages sent by the parent thread.

\* postmessage

Pass a message to the worker.

\* close()

Terminating Workers

Workers are resource-intensive; they are OS-level threads. Therefore, you do not want to create a large number of worker threads, and you should terminate the web worker after it completes its work. Workers can terminate themselves, like this:

```
self.close();
```

Reference: HTML DOM addEventListener() Method; The Basics of Web Workers

**NEW QUESTION 10**

You are developing application web form by using HTML5 and JavaScript. You need to prevent users from submitting form data more than once. Which code segment should you use?

- A. 

```
<body>
  <input id="btnSubmit" type="button" value="Submit" onclick="disable(this)" />
  <input id="btnCancel" type="button" value="Submit" onclick="disable(this)" />
  <script>
    function disable(ctrl) {
      ctrl.disabled = true;
    }
  </script>
</body>
```
- B. 

```
<body>
  <input id="btnSubmit" type="button" value="Submit" onclick="disable()" />
  <input id="btnCancel" type="button" value="Submit" onclick="disable()" />
  <script>
    function disable() {
      this.disabled = true;
    }
  </script>
</body>
```
- C. 

```
<body>
  <input id="btnSubmit" type="button" value="Submit" onclick="disable()" />
  <input id="btnCancel" type="button" value="Submit" onclick="disable()" />
  <script>
    function disable() {
      document.getElementById("btn" + this.name).disabled = true;
    }
  </script>
</body>
```
- D. 

```
<body>
  <input id="btnSubmit" type="button" value="Submit" onclick="disable(me)" />
  <input id="btnCancel" type="button" value="Submit" onclick="disable(me)" />
  <script>
    function disable(ctrl) {
      ctrl.disabled = true;
    }
  </script>
</body>
```

- A. Option A  
B. Option B  
C. Option C  
D. Option D

**Answer:** A

**Explanation:**

\* this, in disable(this), refers to the clicked button.

\* The disabled attribute is a boolean attribute.

When present, it specifies that the <input> element should be disabled. A disabled input element is unusable and un-clickable.

The disabled attribute can be set to keep a user from using the <input> element until some other condition has been met (like selecting a checkbox, etc.). Then, a JavaScript could remove the disabled value, and make the <input> element usable.

Reference: HTML <input> disabled Attribute

**NEW QUESTION 14**

You are modifying a website. The body of the page will be divided into two sections: A content section will contain blog posts and comments.

An area on the right-hand side will contain advertisements. The page is defined by the following HTML.

```
<table width="100%" border="1">
  <tr>
    <td class="header" colspan="2">
      Welcome to My Blog!
    </td>
  </tr>
  <tr>
    <td width="70%">
      ...
    </td>
    <td width="30%">
      ...
    </td>
  </tr>
  <tr>
    <td class="footer" colspan="2">
      ...
    </td>
  </tr>
</table>
```

The site must conform to HTML5 standards and must use HTML5 semantic tags.  
You need to ensure that the advertisements are on the rightmost section of the page. Which tag should you use?

- A. <aside>
- B. <div>
- C. <article>
- D. <footer>

**Answer:** A

**Explanation:**

The <aside> tag defines some content aside from the content it is placed in. The aside content should be related to the surrounding content. aside is now acceptable for secondary content when not nested within an article element. Reference: HTML <aside> Tag

**NEW QUESTION 18**

You are developing an HTML5 web application and are styling text. You need to use the text-transform CSS property. Which value is valid for the text-transform property?

- A. Capitalize
- B. Hidden
- C. Italic
- D. Line-through

**Answer:** A

**Explanation:**

CSS Syntax  
text-transform: none|capitalize|uppercase|lowercase|initial|inherit; Example  
Transform text in different elements: h1 {text-transform:uppercase;}  
h2 {text-transform:capitalize;} p {text-transform:lowercase;}  
Reference: CSS text-transform Property  
[http://www.w3schools.com/cssref/pr\\_text\\_text-transform.asp](http://www.w3schools.com/cssref/pr_text_text-transform.asp)

**NEW QUESTION 21**

You are developing an HTML5 web application and are styling text. You need to use the text-transform CSS property. Which value is valid for the text-transform property?

- A. Italic
- B. Line-through
- C. Capitalize
- D. 20px

**Answer:** C

**Explanation:**

CSS Syntax  
text-transform: none|capitalize|uppercase|lowercase|initial|inherit; Example  
Transform text in different elements: h1 {text-transform:uppercase;}  
h2 {text-transform:capitalize;} p {text-transform:lowercase;}  
Reference: CSS text-transform Property [http://www.w3schools.com/cssref/pr\\_text\\_text-transform.asp](http://www.w3schools.com/cssref/pr_text_text-transform.asp)

**NEW QUESTION 25**

You are modifying a blog site to improve search engine readability.  
You need to group relevant page content together to maximize search engine readability. Which tag should you use?

- A. <span>
- B. <nav>
- C. <code>
- D. <section>

**Answer:** D

**Explanation:**

The <section> tag defines sections in a document. Such as chapters, headers, footers, or any other sections of the document.

**NEW QUESTION 28**

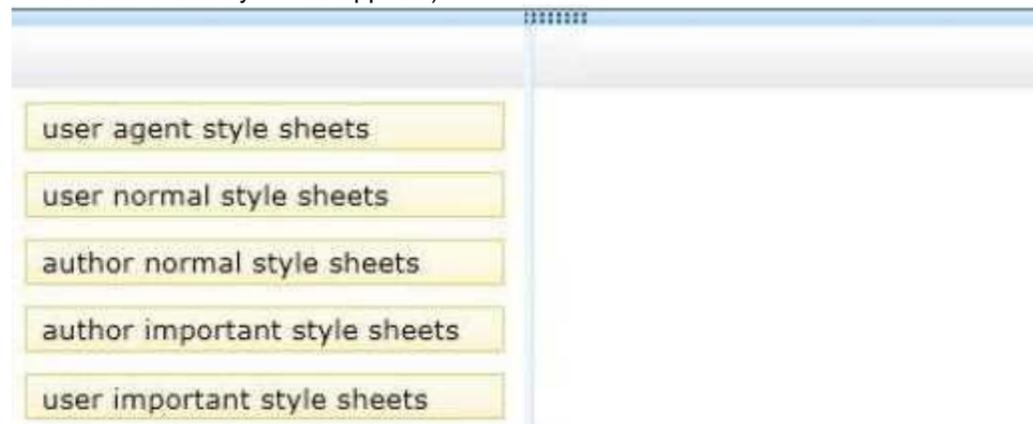

DRAG DROP

You are creating an application by using HTML5 and CSS3. The styles for the pages are derived from five style sheets.

The styles are not being applied correctly to the pages in the application.

You need to determine the order in which the style sheets will be applied by the browser.

In which order will the five style sheets be applied? (To answer, move the style sheet types from the list of style sheet types to the answer area and arrange them in the order that they will be applied.)

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: user agent style sheets Box 2: user normal style sheets

Box 3 author normal style sheets: Box 4: author important style sheets Box 5: user important style sheets Note:

The order of declarations from least important to most important:

user agent declarations user normal declarations author normal declarations

author important declarations user important declarations

**NEW QUESTION 29**

You troubleshoot a webpage that contains the following HTML element:

```
<canvas id= "clickCanvas" width="300"> height= "300">
```

Your browser does not support the HTML5 canvas.</canvas>

The following JavaScript code is included in a script tag in the HEAD section of the webpage: (Line numbers are included for reference only.)

```
01 var canvas;
02 var context;
03 window.onload = function initialize() {
04     canvas = document.getElementById('clickCanvas');
05     context = canvas.getContext('2d');
06     drawBox();
07
08 }
09 function clickReporter(e) {
10     alert('clicked');
11 }
12 function drawBox() {
13     context.fillStyle = 'black';
14     context.strokeRect(20, 20, canvas.width - 20, canvas.height - 20);
15 }
```

You need to invoke the clickReporter() JavaScript function when a user clicks the mouse on the canvas HTML element.

What should you do?

- A. Add the following attribute to the canvas HTML element: clicked= "clickReporter()"
- B. Replace the code segment at line 06 with the following code segment: drawBox.Click += clickReporter;
- C. Insert the following code segment at line 07: canvas.onclick = clickReporter;
- D. Insert the following code segment at line 07: canvas, click = clickReporter;

**Answer:** A

**NEW QUESTION 30**

You create an application that sends information to a web service by using the following code: (Line numbers are included for reference only.)

```
01 function CustomError(code) {
02   this.errorCode = code;
03 }
04
05 var code = send();
06 if (code != 0) {
07   throw new CustomError(code);
08 }
```

When the web service returns a non-zero result code, you must raise an exception that contains the result code.

You need to implement the code that generates the exception. Which line of code should you insert at line 04?

- A. CustomError.prototype = Error.prototype;
- B. CustomError["ErrorType"] = Error;
- C. CustomError.customError = true;
- D. Error-constructor = CustomError;

**Answer:** A

**Explanation:**

\* Object.prototype.constructor

Returns a reference to the Object function that created the instance's prototype. Note that the value of this property is a reference to the function itself, not a string containing the function's name. The value is only read-only for primitive values such as 1, true and "test".

\* The constructor property is created together with the function as a single property of func.prototype.

Reference: Object.prototype.constructor

**NEW QUESTION 34**

DRAG DROP

You develop an HTML application that calls a web service to retrieve JSON dat

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You can access object properties in two ways:

objectName.propertyName or objectName[propertyName] Reference: JavaScript Objects

**NEW QUESTION 37**

DRAG DROP

A company asks you to create a function that displays loan amounts to their customers. You must create the function by using JavaScript to meet the following requirements: Display three different loan amounts to each customer.

Display loan amounts in order starting with the greatest amount and ending with the least amount. You need to implement the function.

How should you complete the relevant code? (To answer, drag the appropriate command or commands to the correct location or locations in the answer area. Use only commands that apply.)

**Answer Area**

showSomeLoanAmount();

showAnotherLoanAmount();

var loanAmount = 400;

var loanAmount = 800;

var loanAmount = 1000;

```
function showLoanAmounts() {
  [ ]
  function showSomeLoanAmount() {
    [ ]
    function showAnotherLoanAmount() {
      [ ]
      alert(loanAmount);
    }
    [ ]
    alert(loanAmount);
  }
  showSomeLoanAmount();
  alert(loanAmount);
}
```

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

\* The innermost assignment to the loanAmount variable should be the highest.  
 \* Local variables have local scope: They can only be accessed within the function. Example  

```
// code here can not use carName function myFunction() {
var carName = "Volvo";
// code here can use carName
}
```

\* A variable declared outside a function, becomes GLOBAL.  
 A global variable has global scope: All scripts and functions on a web page can access it.  
 Example

```
var carName = " Volvo";
// code here can use carName function myFunction() {
// code here can use carName
}
```

\* The alert() method displays an alert box with a specified message and an OK button.  
 An alert box is often used if you want to make sure information comes through to the user. Reference: JavaScript Scope

**NEW QUESTION 40**

**DRAG DROP**

You are developing an application for a retail store. The application will be used on mobile devices to provide real-time directions to the store. You have the following requirements:  
 The application must find out a user's location.  
 As the user moves, the application must update the screen with the new location. As the user moves, the application must display the user's speed.  
 You need to develop the application to meet the requirements.  
 Which code segment or segments should you use? (To answer, drag the appropriate code segment or segments to the correct location in the work area)

- A. Mastered
- B. Not Mastered

**Answer: A**

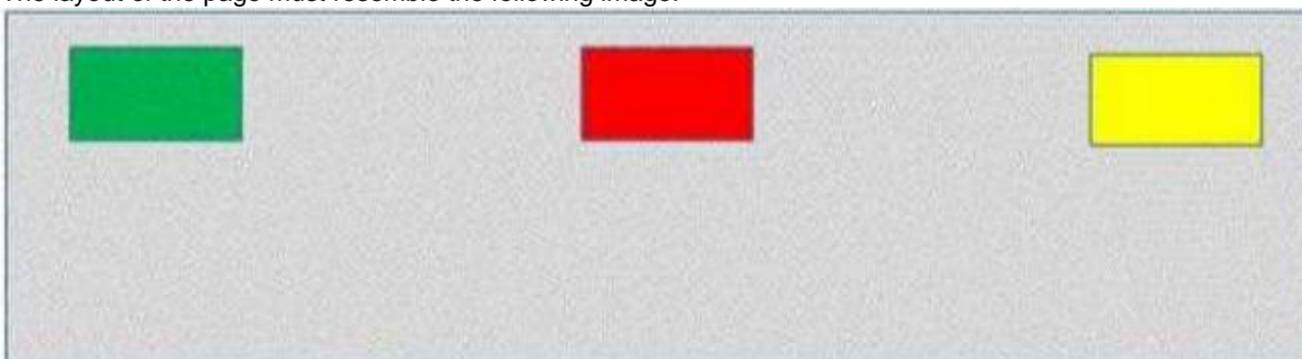

**Explanation:**

\* geolocation.watchPosition  
 watchPosition() - Returns the current position of the user and continues to return updated position as the user moves (like the GPS in a car).  
 \* position data include:  
 / coords.speed  
 The speed in meters per second  
 / coords.accuracy (incorrect answer) The accuracy of position  
 Etc.  
 \* The getCurrentPosition() (incorrect)  
 The getCurrentPosition() method returns an object if it is successful. The latitude, longitude and accuracy properties are always returned. The other properties below are returned if available. Reference: HTML5 Geolocation

**NEW QUESTION 41**

**HOTSPOT**

You are developing a web page.  
 The webpage must display a container. The container must display three colored rectangles near the top of the container. The colored rectangles are, in order, green, red, and yellow. The rectangles are aligned horizontally and evenly spaced across the width of the container.  
 The layout of the page must resemble the following image:

You need to ensure that the page renders properly.  
 How should you complete the relevant styles? (To answer, select the appropriate option from each drop-down list in the answer area.)

```

<style>
  .box {
    display: -ms-flexbox;
    -ms-flex-direction: row;

    -ms-flex-align: ;

    -ms-flex-pack: ;

    width: 550px;
    height: 400px;
  }
</style>
<style>
  .box {
    display: -ms-flexbox;
    -ms-flex-direction: row;

    -ms-flex-align: ;
    end
    start
    center
    stretch

    -ms-flex-pack: ;
    end
    start
    center
    stretch

    width: 550px;
    height: 400px;
  }
</style>

```

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

\* -ms-flex-align

center: The flexbox item's margin box is centered in the cross axis within the line.

\* -ms-flex-pack

The 'flex-pack' property defines the flexibility of these packing spaces. Reference: CSS property '-ms-flex-align'; CSS property '-ms-flex-pack'

**NEW QUESTION 46**

DRAG DROP

You create the following JavaScript code:

```

var myApplication = myApplication || {};
myApplication.LoanCalculator = function (displayControl, principle, term, rate) {
  this.Principle = principle;
  this.Term = term;
  this.Rate = rate / 1200;
  this.PaymentAmount = 0;
  this.showPayment = document.getElementById(displayControl);
};
myApplication.LoanCalculator.prototype = {
  CalculatePayment: function () {
    this.PaymentAmount = (this.Principle * this.Rate / (1 - (Math.pow(1/(1 + this.Rate), this.Term)))).toFixed(2);
    this.showPayment.innerHTML = '$' + this.PaymentAmount;
  },
  ShowCanWeAfford: function () {
  }
};

```

You must complete the ShowCanWeAfford() function:

Display the message Denied! If the PaymentAmount variable is greater than 500. Display the message Approved! If the PaymentAmount variable is less than 300.

Display the message Approved with caution! If the PaymentAmount variable is less than 500 and greater than 300.

You need to add statements to the ShowCanWeAfford() JavaScript function to meet the requirements.

Which three actions should you perform in sequence? (Develop the solution by selecting the required code segments and arranging them in the correct order.)

	Answer Area
<pre>else if (this.PaymentAmount    300) {   alert('Approved!'); }</pre>	
<pre>else if (this.PaymentAmount &gt; 500 &amp;&amp; this.PaymentAmount &lt; 300) {   alert('Approved with caution!'); }</pre>	
<pre>else if (this.PaymentAmount &lt; 300) {   alert('Approved!'); }</pre>	
<pre>if (this.PaymentAmount &gt; 500) {   alert('Denied!'); }</pre>	
<pre>if (this.PaymentAmount &gt;= 500) {   alert('Denied!'); }</pre>	
<pre>else {   alert('Approved with caution!'); }</pre>	
<pre>if (this.PaymentAmount &gt;&gt; 500) {   alert('Denied!'); }</pre>	
<pre>else if (this.PaymentAmount &lt;&lt; 300) {   alert('Approved!'); }</pre>	

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1:

```
if (this.PaymentAmount > 500) {
  alert('Denied!');
}
```

Box 2:

```
else if (this.PaymentAmount < 300) {
  alert('Approved!');
}
```

Box 3:

```
else {
  alert('Approved with caution!');
}
```

Note:

Use > for greater than comparison. Use < for less than comparison.

**NEW QUESTION 48**

**HOTSPOT**

You test a webpage that contains the following JavaScript code:

```
<script type="text/javascript">
onerror = unhandled;
function unhandled(msg, url, line) {
    alert('There has been an unhandled exception.');
```

The webpage also contains the following markup:

```
Integer 1: <input type="text" id="int1" /><br />
Integer 2: <input type="text" id="int2" /><br />
<input type="button" name="add" value="Add" onclick="add();" />
<input type="button" name="divide" value="Divide" onclick="divide();" />
```

You need to ascertain how the webpage responds when the user enters characters and then clicks the add and divide buttons. For each statement in the table, select Yes if the action causes the webpage to behave as described. Select No if it does not. Make only one selection in each column.

Yes	No	Description of Behavior
<input type="radio"/>	<input type="radio"/>	If the user enters the number 2 in the <b>int1</b> textbox, the number 3 in the <b>int2</b> textbox, and then clicks the <b>add</b> button, the webpage displays an alert message with a value of 5.
<input type="radio"/>	<input type="radio"/>	If the user enters the number 2 in the <b>int1</b> textbox, the number 0 in the <b>int2</b> textbox, and then clicks the <b>divide</b> button, the unhandled JavaScript function runs.
<input type="radio"/>	<input type="radio"/>	If the user enters the number 2 in the <b>int1</b> textbox, the letter a in the <b>int2</b> textbox, and then clicks the <b>divide</b> button, the unhandled JavaScript function runs.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Yes	No	Description of Behavior
<input type="radio"/>	<input checked="" type="radio"/>	If the user enters the number 2 in the <b>int1</b> textbox, the number 3 in the <b>int2</b> textbox, and then clicks the <b>add</b> button, the webpage displays an alert message with a value of 5.
<input type="radio"/>	<input checked="" type="radio"/>	If the user enters the number 2 in the <b>int1</b> textbox, the number 0 in the <b>int2</b> textbox, and then clicks the <b>divide</b> button, the unhandled JavaScript function runs.
<input checked="" type="radio"/>	<input type="radio"/>	If the user enters the number 2 in the <b>int1</b> textbox, the letter a in the <b>int2</b> textbox, and then clicks the <b>divide</b> button, the unhandled JavaScript function runs.

**NEW QUESTION 51**

You are developing a web application that can function when users are not connected to the Internet. You need to check the Internet connectivity status of a user's browser. Which method should you use?

A. 

```
function checkConnection()
{
  if (navigator.isOnline) {
    ...
  }
}
```

B. 

```
function checkConnection()
{
  if (browser.isOnline) {
    ...
  }
  else
  {
    ...
  }
}
```

C. 

```
function checkConnection()
{
  if (browser.online) {
    ...
  }
  else
  {
    ...
  }
}
```

D. 

```
function checkConnection()
{
  if (navigator.online) {
    ...
  }
  else
  {
    ...
  }
}
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

**Answer: D**

**Explanation:**

Navigator onLine Property

The onLine property returns a Boolean value that specifies whether the browser is in online or offline mode. Example

Find out whether the browser is online:

var x = "Is the browser online? " + navigator.onLine; The result of x will be:

Is the browser online? true Reference: Navigator onLine Property

**NEW QUESTION 54**

**HOTSPOT**

A company has an XML file named products.xml on a web server. The file contains a list of the products that the company sells.

You need to display the contents of the products.xml file in a DIV element named Output.

How should you complete the relevant code? (To answer, select the appropriate option from each drop-down list in the answer area.)

**Explanation:**

When readyState is 4 and status is 200, the response is ready:

```
Example xmlhttp.onreadystatechange=function()
{
if (xmlhttp.readyState==4 && xmlhttp.status==200)
{
document.getElementById("myDiv").innerHTML=xmlhttp.responseText;
}
}
```

Note:

- \* readyState == 4
- Holds the status of the XMLHttpRequest. Changes from 0 to 4: 0: request not initialized
- 1: server connection established 2: request received
- 3: processing request
- 4: request finished and response is ready
- \* status==200 200: "OK"
- 404: Page not found
- Reference: AJAX - The onreadystatechange Event

**NEW QUESTION 58**

You are developing an application that analyzes population data for major cities in the United States. The application retrieves population statistics for a city by using a web service.

You need to request data from the web service by using jQuery. Which code segment should you use?

- A. 

```
$.ajax({
  url: "Services/WSAjax.aspx/GetPopulationCity?city='Boston'",
  dataType: "text", type: "POST"
});
```
- B. 

```
$.ajax({
  url: "Services/WSAjax.aspx/GetPopulationCity",
  dataType: "text", type: "SEND", data: { city: "Boston" }
});
```
- C. 

```
$.ajax({
  url: "Services/WSAjax.aspx/GetPopulationCity?city='Boston'",
  dataType: "text", type: "SEND"
});
```
- D. 

```
$.ajax({
  url: "Services/WSAjax.aspx/GetPopulationCity",
  dataType: "text", type: "POST", data: { city: "Boston" }
});
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

**Answer: D**

**Explanation:**

- \* type: We post a SOAP request.
- \* data: Data to be sent to the server. The data option can contain either a query string of the form key1=value1&key2=value2, or an object of the form {key1: 'value1', key2: 'value2'}.
- Reference: jQuery.ajax()

**NEW QUESTION 59**

You develop a webpage by using HTML5. You create the following markup:

```
<input type="url" name="website" required="required" />
```

You need to ensure that the value that the user enters contains a secure URL. What should you do?

- A. Add the following attribute to the input tag: value="https://v"
- B. Add the following attribute to the input tag: pattern="https://.+"
- C. Add the following attribute to the input tag: value="ssl"
- D. Add the following attribute to the input tag: itemtype="https"

**Answer: B**

**Explanation:**

- Note:
- \* The pattern attribute is supported in Internet Explorer 10, Firefox, Opera, and Chrome.
- \* The pattern attribute specifies a regular expression that the <input> element's value is checked against.

\* The pattern attribute works with the following input types: text, search, url, tel, email, and password

**NEW QUESTION 61**

You are developing an HTML5 web application that displays stock information. The application loads information from a web service by using AJAX. The following code defines a Stock object and loads stock data.

```
function Stock(symbol) {
    this.symbol = symbol;
    this.low = 0;
    this.high = 0;
}

Stock.prototype.parseStock = function (data) {
    this.low = data.low;
    this.high = data.high;
}

Stock.prototype.loadStock = function () {
```

You need to implement the loadStock function. Which code segment should you use?

- A. 

```
var stock = this;
$.get('data.xml', function (data) {
    stock.parseStock(data);
});
```
- B. 

```
$.get('data.xml', function (data, innerScope) {
    innerScope.parseStock(data);
});
```
- C. 

```
$.get('data.xml', function (data) {
    this.parseStock(data);
});
```
- D. 

```
$.get('data.xml', function (data) {
    (function (scope) {
        scope.parseStock(data);
    })(data);
});
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

**Answer: A**

**NEW QUESTION 66**

DRAG DROP

You are developing an application by using JavaScript.

You must write a function that returns the sum of the variables named v1, v2, v3, v4. You need to complete the sum function.

How should you complete the relevant code? (To answer, drag the appropriate code segment or segments to the correct location or locations in the answer are

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

\* What is the difference between call and apply?

apply lets you invoke the function with arguments as an array; call requires the parameters be listed explicitly.

Pseudo syntax: theFunction.apply(valueForThis, arrayOfArgs) theFunction.call(valueForThis, arg1, arg2, ...)

Reference: What is the difference between call and apply?

#### NEW QUESTION 70

You are troubleshooting an application. Users report that the UI is slow to respond.

You need to improve UI responsiveness by moving application tasks to web workers.

Which two tasks can you move to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

A. A function that loops through the Document Object Model to update the style of page elements

B. A long-running calculation that requires looping through an array

C. A function that performs graphic-intensive animation

D. A function that stores large amounts of data to local storage

**Answer: BC**

#### Explanation:

Note:

\* Despite the improvements in JavaScript engines, it is not uncommon for users to encounter frozen user interfaces as the browser works through resource intensive tasks. This leads to a horrible user experience. The purpose of Web Workers is to give developers a way of instructing the browser to process large tasks in the background; therefore preventing the UI from freezing up.

\* The Web Workers specification defines an API for spawning background scripts in your web application. Web Workers allow you to do things like fire up long-running scripts to handle computationally intensive tasks, but without blocking the UI or other scripts to handle user interactions

#### NEW QUESTION 75

You are building a web page for a newspaper publisher. You have the following requirements:

The web page should split the content into columns that are at least 100 pixels wide. The number of columns displayed must be set by the browser.

You need to implement the correct CSS properties. Which line of code should you use?

A. `<div id="outer" style="width: 100px; column-fill: balance;">...</div>`

B. `<div id="outer" style="width: 100px; column-gap: 10px;">...</div>`

C. `<div id="outer" style="column-width: 100px;"> . . .</div>`

D. `<div id="outer" style="width: 100px; columns: 100px 3">...</div>`

**Answer: C**

#### Explanation:

column-width

The width attribute specifies the width of a `<col>` element.

Normally, a `<col>` element takes up the space it needs to display the content. The width attribute is used to set a predefined width of a `<col>` element.

Syntax:

```
<col width="pixels|%|relative_length">
```

#### NEW QUESTION 76

DRAG DROP

You are developing a web page that includes the following HTML.

```
<input name="ITSupport" type="checkbox" value="IT" id="choc"
  onclick="enable();" /><label for="IT">IT Support</label>
<input type="email" placeholder="IT@Contoso.com" id="eMail"
  name="eMail" disabled /><label for="eMail" >Your eMail </label>
```

You need to ensure that the email element is enabled only if the user selects the IT Support check box.

Which CSS selectors should you use? (To answer, drag the appropriate selector to the correct location. Each selector may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

enabled

disabled

hidden

true

false

set

```

input:  {
  background-color: #e0e0e0;
}

<script type="text/javascript">
function enable(e) {
  if (document.getElementById) {
    if (document.getElementById('IT').checked) {
      document.getElementById('eMail').  =  ;

    } else {
      document.getElementById('eMail').  =  ;
    }
  }
}
</script>

```

- A. Mastered
- B. Not Mastered

**Answer:** A

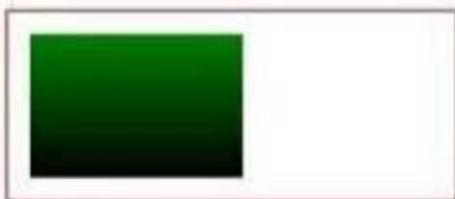

**Explanation:**

The disabled property sets or returns whether an email field should be disabled, or not. A disabled element is unusable and un-clickable. Disabled elements are usually rendered in gray by default in browsers. Example  
Disable an email field: `document.getElementById("myEmail").disabled = true;` Reference: Input Email disabled Property

**NEW QUESTION 79**

**HOTSPOT**

You are creating a custom CSS3 style. You have the following requirements to complete the style: Box1 has a red outline. Box1 contains box2, and box2 must remain inside box1. Box2 must have a green to black gradient. Box2 must be surrounded by white space. The style resembles the following diagram:

You need to add the CSS3 code to the styles. How should you complete the relevant code? (To answer, select the appropriate code segment in each drop-down list in the answer area.)

```

<style>
  #box1
  {
    
  }

  #box2
  {
    width: 6em;
    height: 4em;
    position: absolute;
    
    
  }
</style>

```

```

<style>
  #box1
  {
    margin: 5em; border: 1px solid #f00;
    margin: 5em; border-color: red;
    margin: 10px 10px 10px 10px; color: red;
    margin: 10px 10px 10px 10px; border-style: solid;
  }

  #box2
  {
    width: 6em;
    height: 4em;
    position: absolute;
    background-image: linear-gradient(to bottom, green, black);
    background-image: linear-gradient(to top, green, black);
    background-image: radial-gradient(to bottom, green, black);
    background-image: radial-gradient(to top, green, black);
    margin: 0px 0px 0px 0px;
    margin: 10px 10px 10px 10px;
    padding: 0px 0px 0px 0px;
    padding: 10px 10px 10px 10px;
  }
</style>

```

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

- \* border: 1px solid #f00; a red border 1 pixel thick.
- \* background-image: linear-gradient(to bottom, green,black); Linear Gradients (goes down/up/left/right/diagonally). Starts at the top with green and goes to bottom with black.
- \* margin: 10px 10px 10px 10px; The CSS margin properties define the space around elements. The top, right, bottom, and left margin can be changed independently using separate properties. Incorrect:
- \* border-color: red; will not display any border
- \* Radial Gradients (defined by their center).

**NEW QUESTION 81**

You are creating a blog site by using HTML5 and JavaScript. An inline frame enables users to post comments. It is possible for users to inject malicious scripts into their comments.

You need to minimize the ability for malicious scripts to execute on the site. Which line of code should you use?

- A. <iframe sandbox src="frame1.html"></iframe>
- B. <iframe seamless="allowscripts" src="frame1.html"></iframe>
- C. <iframe seamless src="frame1.html"></iframe>
- D. <iframe sandbox="allowscripts" src"frame1.html"></iframe>

**Answer:** A

**Explanation:**

The sandbox attribute enables an extra set of restrictions for the content in the iframe. Syntax <iframe sandbox="value"> Attribute Values no value: Applies all restrictions etc. No attribute value: allowscripts (not D) Reference: HTML <iframe> sandbox Attribute

**NEW QUESTION 85**

You create the following JavaScript code:

```

var myApplication = myApplication || {};
myApplication.Vehicle = function (displayControl, color, seatCount, tranType, wheelCount) {
  this.Color = color;
  this.NumberOfSeats = seatCount;
  this.TransmissionType = tranType;
  this.NumberOfWheels = wheelCount;
  this.showVehicle = document.getElementById(displayControl);
};
myApplication.Vehicle.prototype = {
  Describe: function () {
    var valuesToDisplay = '';
    for (var property in this) {
      if (typeof (this[property]) === 'string')
      {
        valuesToDisplay += 'Vehicle ' + property + ' is ' + this[property] + '<br />';
      }
      else if (typeof (this[property]) === 'number')
      {
        if (this[property] < 4)
        {
          valuesToDisplay += 'Stay safe!' + '<br />';
        }
        else if (this[property] >= 10)
        {
          valuesToDisplay += 'Big machine!' + '<br />';
        }
      }
    }
    this.showVehicle.innerHTML = valuesToDisplay;
  }
};

```

You have the following requirements:

You must invoke a function that displays the vehicle information within the following HTML element:

<div id="display"x/div>

The output of the function must appear on the webpage as follows: Vehicle Color is silver

Stay safe!

Vehicle TransmissionType is manual Big machine!

You need to invoke the JavaScript function to display the required output in the HTML element. Which two code segments should you use? (Each correct answer presents a complete solution. Choose two.)

- A. `var mySportsCar = new myApplication.Vehicle('display', 'manual', 4, 'silver', 4);`  
`mySportsCar.Describe();`
- B. `var myDumpTruck = new myApplication.Vehicle('display', 'silver', 10, 'manual', 2);`  
`myDumpTruck.Describe();`
- C. `var myBigRig = new myApplication.Vehicle('display', 'silver', 2, 'manual', 16);`  
`myBigRig.Describe();`
- D. `var myMotorcycle = new myApplication.Vehicle('display', 'blue', 2, 'manual', 2);`  
`myMotorcycle.Describe();`
- E. `var myMotorhome = new myApplication.Vehicle('display', 'silver', 3, 'manual', 10);`  
`myMotorhome.Describe();`

- A. Option A  
B. Option B  
C. Option C  
D. Option D  
E. Option E

**Answer:** CE

**Explanation:**

The second argument should be 'silver'.

The third argument should be a number less than 4.

**NEW QUESTION 90**

DRAG DROP

You are developing a form that captures a user's email address by using HTML5 and jQuery. The form must capture the form elements as a string.

You need to implement this functionality.

How should you develop the form? (To answer, drag the appropriate code segment to the correct target or targets in the answer area)

- A. Mastered  
B. Not Mastered

**Answer:** A

**Explanation:**

\* The serialize() method creates a URL encoded text string by serializing form values.

You can select one or more form elements (like input and/or text area), or the form element itself. The serialized values can be used in the URL query string when making an AJAX request.

Example: \$("form").serialize();

\* decodeURIComponent

The decodeURIComponent() function decodes a URI component.

Return Value: A String, representing the decoded URI Incorrect:

Not decodeURI:

decodeURI is intended for use on the full URI.

decodeURIComponent is intended to be used on .. well .. URI components that is any part that lies between separators (; / ? : @ & = + \$ , #).

Reference: jQuery serialize() Method

**NEW QUESTION 93**

You are developing a web page that performs CPU-intensive calculations. A web worker processes these calculations on a separate background thread. The process is instantiated from the web page. You need to stop the web worker process after the calculations are completed.

Which two actions can you perform to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

- A. From the web page, call the close() method.
- B. From the web worker process, call the terminate() method.
- C. From the web page, call the terminate() method.
- D. From the web worker process, call the close() method.

**Answer:** CD

**Explanation:**

Terminating a worker

If you need to immediately terminate a running worker, you can do so by calling the worker's terminate() method:

myWorker.terminate();

The worker thread is killed immediately without an opportunity to complete its operations or clean up after itself.

Workers may close themselves by calling their own close method: close();

Reference: Using Web Workers

**NEW QUESTION 95**

You are developing a JavaScript library. You have the following requirements:

Custom exceptions must include an error message and custom error number. These exceptions must be thrown when data validation errors occur.

Developers must call the library to easily catch the exception and identify the problem. You develop the following code. (Line numbers are included for reference only.)

```
01 function ValidationException(number, message) {
02     this.message = message;
03     this.name = "myLibrary Exception";
04     this.number = number;
05 }
06
07 function myFunction(dayOfWeek) {
08     if (dayOfWeek > 7) {
09
10     }
11 }
```

You need to complete the code to meet the requirements. Which line of code should you insert at line 09?

- A. throw new ValidationException.Exception (123, "Day of week must be less than 7");
- B. return new ValidationException(123, "Day of week must be less than 7");
- C. throw ValidationException(123, "Day of week must be less than 7");
- D. catch ValidationException(123, "Day of week: must be less than 7");

**Answer:** A

**Explanation:**

Example:

if (value < -100 || value > 100)

```
{
throw new ValidationException(String.Format("Value is {0} than {1}.", (value > 100 ? "greater" : "less"), value));
}
```

**NEW QUESTION 97**

HOTSPOT

You have the following markup.

```
<form id= "formLogin">
  <input type= "text" id= "fieldLoginName" />
  <input type= "password" id= "fieldPassword" value= "MySecretPassword" />
  <input type= "submit" onclick= "Validation ();" />
</form>
<script>
  $(document).ready (function () {
    var fldPassword = document.getElementById("fieldPassword");
    fldPassword.value = "MyNewSecretPassword";
    alert(fldPassword.value);
  });
</script>
```

For each of the following statements, select yes if the statement is true. Otherwise, select No.

**Answer Area**

Statements	Yes	No
<b>A default value is set for the fieldPassword field.</b>	<input type="radio"/>	<input type="radio"/>
<b>As a user types in the fieldPassword field, the typed characters will be masked.</b>	<input type="radio"/>	<input type="radio"/>
<b>When the page loads, an alert will be displayed that shows the current value of the fieldPassword field as MyNewSecretPassword.</b>	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

Statements	Yes	No
<b>A default value is set for the fieldPassword field.</b>	<input checked="" type="radio"/>	<input type="radio"/>
<b>As a user types in the fieldPassword field, the typed characters will be masked.</b>	<input checked="" type="radio"/>	<input type="radio"/>
<b>When the page loads, an alert will be displayed that shows the current value of the fieldPassword field as MyNewSecretPassword.</b>	<input checked="" type="radio"/>	<input type="radio"/>

**NEW QUESTION 100**

**HOTSPOT**

You have the following code:

```
var var1 = parseInt( '12', 10);
var var2 = parseInt( 'aaa', 10);
var var3 = parseInt( '12px', 10);
var var4 = parseInt( 'foo2', 10);
var var5 = parseInt( '12a5', 10);
```

You need to identify the correct value of each variable.

What should you identify? To answer, drag the appropriate values to the correct variables in the answer are

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

References: [http://www.w3schools.com/jsref/jsref\\_parseint.asp](http://www.w3schools.com/jsref/jsref_parseint.asp)

**NEW QUESTION 101**

DRAG DROP

You are developing a corporate website for a company. The website uses a style sheet to enforce corporate image standards. Users report that the website is not properly rendering the styles.

You create a web page to test the styles by using the following code.

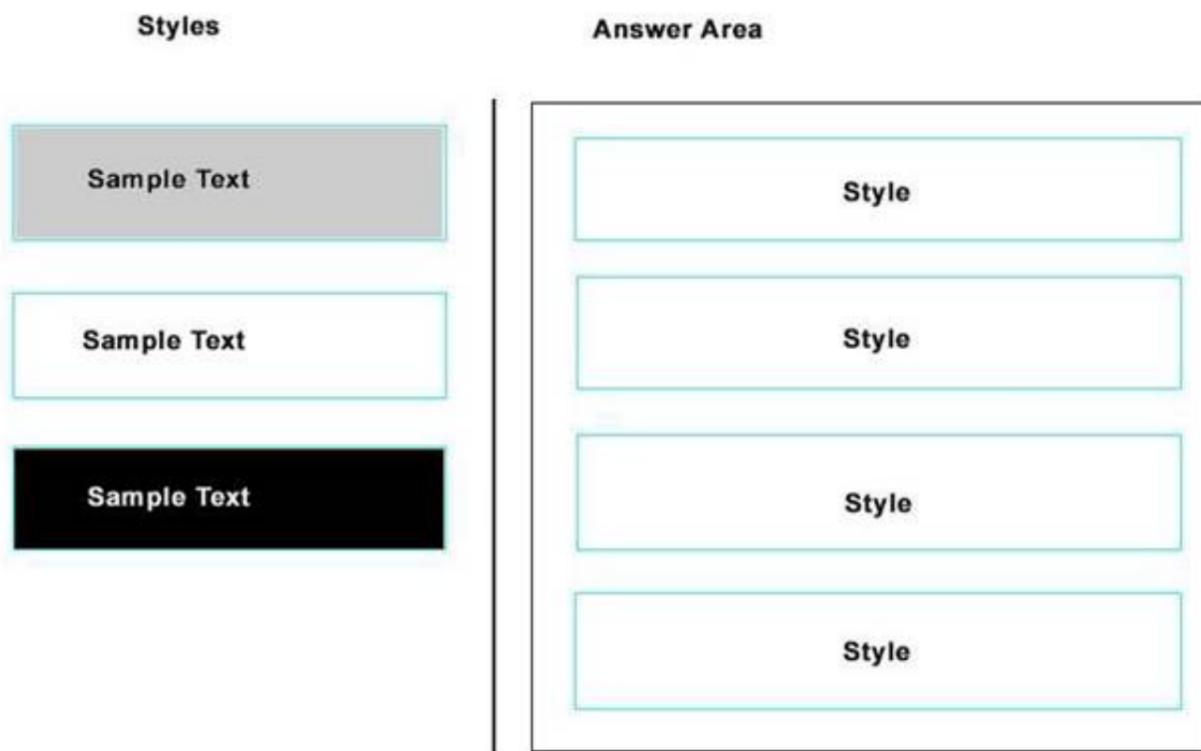

```
<!DOCTYPE html>
<html>
<head>
<title></title>
<style>
  body {
    background-color: gray;
  }

  .a {
    background-color: white;
  }

  .b {
    background-color: black;
    color: white;
  }
</style>
</head>
<body>
  <div class = "a">Sample Text
    <div class = "b">Sample Text</div>
  <p>Sample Text</p>
</div>
  <div class= "a b">Sample Text</div>
</body>
</html>
```

You need to verify how the style will be displayed.

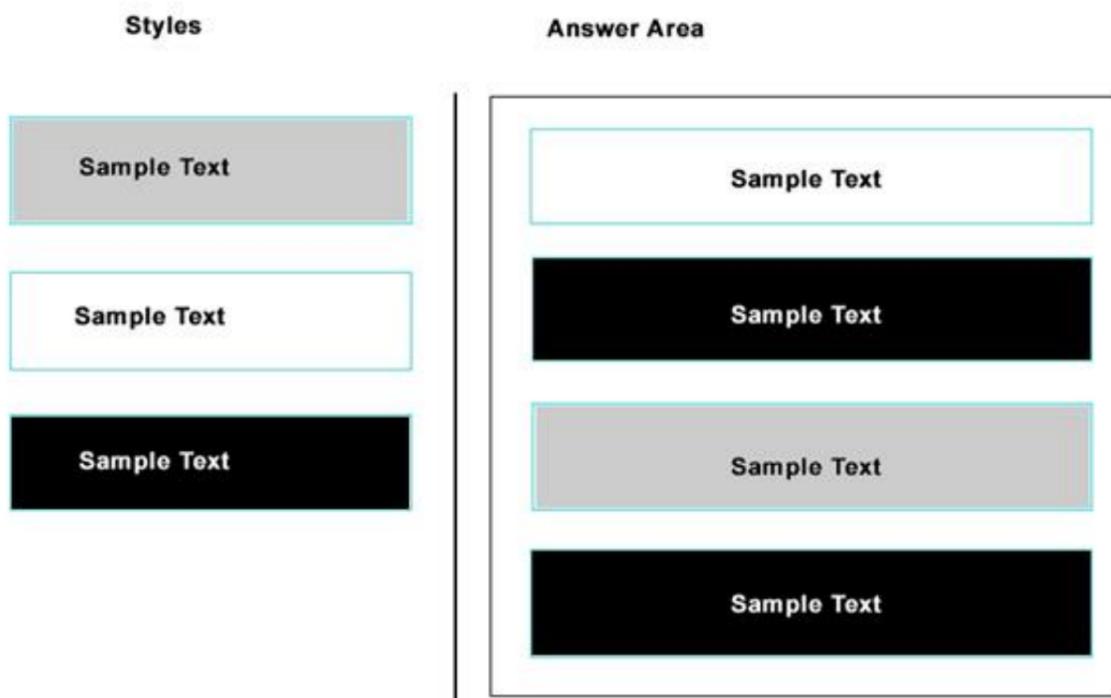

In which order will the results be displayed? (To answer, drag the appropriate style from the list of styles to the correct location or locations in the work area.)

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**NEW QUESTION 106**

Which CSS3 code fragment uses a pseudo-element?

- A. `p: : first-letter {font-weight: bold;}`
- B. `div>p {font-weight: bold;}`
- C. `first-letter {font-weight: bold;}`
- D. `div+p {font-weight: bold;}`

**Answer:** A

**Explanation:**

References:

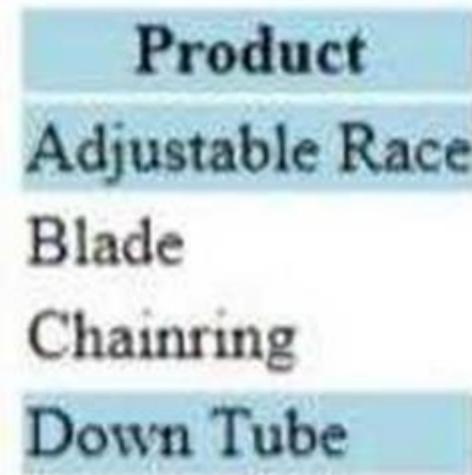

<http://www.html5code.nl/css3-tutorials/css3-tutorial-css3-selectors/>

**NEW QUESTION 111**

You develop an HTML application that contains a table that displays a list of products. The table is defined with the following HTML markup:

```
<table>
  <thead>
    <tr>
      <th>Product</th>
    </tr>
  </thead>
  <tbody>
    <tr>
      <td>Adjustable Race</td>
    </tr>
    <tr>
      <td>Blade</td>
    </tr>
    <tr>
      <td>Chainring</td>
    </tr>
    <tr>
      <td>Down Tube</td>
    </tr>
  </tbody>
</table>
```

You must style the table to look like the following image:

You need to implement the CSS selectors to select the rows that must have a blue background. Which CSS selector should you use?

- A. tr : first-line, tr :last-child
- B. tr [line |=0, 1, 3]
- C. tr: nth-child (0) : in-range, tr: nth-child (3) : in-range
- D. tr: nth-child(3n+1) {background-color : blue;}

**Answer: D**

**NEW QUESTION 114**

You are developing an application in HTML5. You have the following code.

```
function NewOrder (orderId, orderDate) {
  this.orderId = orderId;
  this.orderDate = orderDate;
}
```

You need to add an additional property to the function definition. Which line of code should you use?

- A. NewOrder ["newProperty"] = "newProperty"
- B. NewOrde
- C. prototyp
- D. newProperty = "newProperty"
- E. this.NewOrde
- F. newProperty = "newProperty"
- G. NewOrde
- H. newProperty = "newProperty"

**Answer: C**

**Explanation:**

References: [http://www.w3schools.com/js/js\\_object\\_prototypes.asp](http://www.w3schools.com/js/js_object_prototypes.asp)

**NEW QUESTION 119**

DRAG DROP

You develop the following code:

```

var isBig = function (nb) {
  if (nb > 10)
    return true;
  else
    return false;
}

displayAlertIfBigNumber = function (aNumber)
{
  switch (Target 1) {
    case Target 2:
      alert ("aNumber is big")
      Target 3;
      Target 4;
      alert ("aNumber is not big");
      break
  }
}

```

You need to complete the code to meet the following requirements:  
How should you complete the code? To answer, drag the appropriate code elements to the correct targets in the answer area

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Code elements	Answer Area
aNumber	Target 1: isBig(aNumber)
break	Target 2: true
default	Target 3: break
isBig(aNumber)	Target 4: default
true	

**NEW QUESTION 123**  
DRAG DROP  
You have the following markup:

```

<style>
  .flex1 {
    Target 1 : Target 2;
  }
  .flex2 {
    Target 3 : Target 4;
  }
</style>
<div style="display:flex;height:300px;background-color:red">
  <div class="flex1" style="background-color:yellow;border:dotted">
  </div>
  <div class="flex2" style="background-color:grey;border:dotted">
  </div>
</div>

```

You need to complete the styles to meet the following requirements:

How should you complete the styles? To answer, drag the appropriate code elements to the correct targets in the answer area. Each code element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

**Code elements**

- flex
- width
- 1
- 2
- 3

**Answer Area**

- Target 1:
- Target 2:
- Target 3:
- Target 4:

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Target 1: Flex  
 Target 2: 1  
 Target 3: Flex  
 Target 4: 2  
<https://css-tricks.com/snippets/css/a-guide-to-flexbox/>

**NEW QUESTION 127**

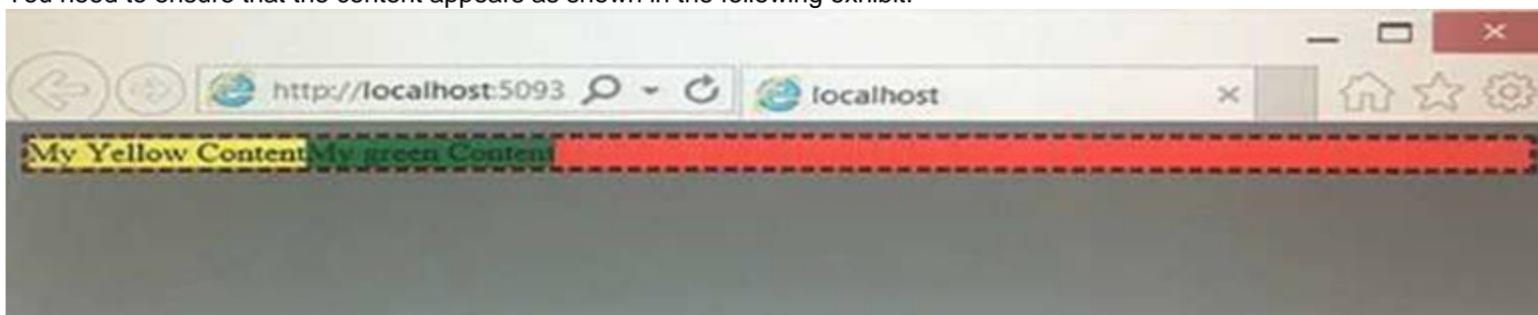

You have the following code:

```

<body>
<div id="red" style="background-color:red;border:dashed;">
  <div id="yellow" style="background-color:yellow;">My Yellow Content</div>
  <div id="green" style="background-color:green;">My green Content</div>
</div>
</body>

```

You need to ensure that the content appears as shown in the following exhibit:

Which display attribute should you use for the red div?

- A. grid
- B. inline
- C. block
- D. flex

**Answer:** B

**Explanation:**

[https://www.w3schools.com/cssref/pr\\_class\\_display.asp](https://www.w3schools.com/cssref/pr_class_display.asp)

**NEW QUESTION 130**

Which CSS3 code fragment styles an H2 element only if it is a direct child of a DIV element?

- A. h2 > div {background-color: #900;}
- B. div, h2 {background-color: #900;}
- C. div {background-color: #900;}h2 {background-color: #900;}
- D. div > h2 {background-color: #900;}

**Answer: D**

**Explanation:**

<https://www.w3.org/TR/CSS21/selector.html%23id-selectors>

**NEW QUESTION 131**

HOTSPOT

You have the following code. (Line numbers are included for reference only.)

```

01 <style>
02 .transition_style
03 {
04   font-size:15px;
05   font-weight:normal;
06   width:50px;
07   height:40px;
08   background:orange;
09   color:#ffffff;
10   padding:10px;
11   margin-left:auto;
12   border-radius:5px;
13   transition-property:width,height,transform,background,font-size,opacity;
14   transition-duration:1s,1s,1s,1s,1s,1s;
15 }
16 .transition_style:hover
17 {
18   font-size:30px;
19   font-weight:bolder;
20   width:100px;
21   height:80px;
22   margin-left:0px;
23   transform:rotateX(360deg);
24   background:red;
25 }
26 </style>

```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

**Answer Area**

Statement	Yes	No
Margin-left will move gradually from right to left.	<input type="radio"/>	<input type="radio"/>
The background color will transition gradually from orange to red.	<input type="radio"/>	<input type="radio"/>
The animation effect will be the same if you replace lines 13 and 14 with the following code:  transition: all 1s linear;	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

No  
Yes  
No  
[https://www.w3schools.com/cssref/pr\\_margin-left.asp](https://www.w3schools.com/cssref/pr_margin-left.asp) <https://css-tricks.com/almanac/properties/t/transition/>  
[https://www.w3schools.com/cssref/css3\\_pr\\_transition.asp](https://www.w3schools.com/cssref/css3_pr_transition.asp)

**NEW QUESTION 133**

DRAG DROP

You have the following markup:

```
<style>
  .yellow {
    background-color: yellow;
  }
  .yellowborder {
    border-color: yellow;
  }
  .border {
    border:dashed;
  }
</style>
<div id="yellowDiv" class="yellow"> My Yellow Content</div>
```

You need to add a dashed border programmatically to the div. You write the following code.

```
document.Target1(Target 2).className += Target 3;
```

How should you complete the code? To answer, drag the appropriate code elements to the correct targets in the answer area. Each code can be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

### Code Elements

- 
- 
- 
- 
- 
- 
- 
- 

### Answer Area

Target 1:

Target 2:

Target 3:

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

getElementById "yellowDiv" "yellow"  
[https://www.w3schools.com/jsref/prop\\_style\\_border.asp](https://www.w3schools.com/jsref/prop_style_border.asp)

**NEW QUESTION 135**

You are creating a custom object as described by the following code. Line numbers are included for reference only.

```
01 function square(side) {
02     this.side = side;
03     this.perimeter = perimeter;
04 }
05
```

You need to implement the perimeter method. Which code segment should you insert at line 05?

- A. function perimeter () {return 4 \* side;}
- B. function perimeter () {return 4 \* this.side;}
- C. function perimeter () {return 4 \* me.side;}
- D. function perimeter (obj) {return 4 \* obj.side;}

**Answer:** B

**Explanation:**

<http://creative-coding.decontextualize.com/objects-with-methods/>

**NEW QUESTION 138**

You are developing an application in HTML5. The application contains the following HTML markup.

```
<div>
  <h1>Resources</h1>
  <a href="http://contoso.com/people.aspx">People</a>
  <a href="http://contoso.com/orgProducts.aspx">Products</a>
  <a href="http://wiki.contoso.org">Resources</a>
  ...
</div>
```

You need to ensure that all of the links referencing domain names ending in .org are displayed in red text. What should you use?

- A. a JSON parse function
- B. a CSS attribute selector
- C. a CSS pseudo-element
- D. a JSON stringify function.

**Answer: B**

**NEW QUESTION 140**

DRAG DROP

You have the following markup.

```
<input type="button" value="oneButton" Target1="Target2(Target3.Target4);" />
```

You need to ensure that when the button is clicked, a message appears that displays the value of the button.

How should you complete the code? To answer, drag the appropriate code elements to the correct targets in the answer area. Each code element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

**Code Elements**

- alert
- innerHTML
- onblur
- onclick
- oneButton
- this
- value

**Answer Area**

- Target 1:
- Target 2:
- Target 3:
- Target 4:

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

**Answer Area**

- Target 1:
- Target 2:
- Target 3:
- Target 4:

**NEW QUESTION 145**

DRAG DROP

You are developing a web application that consumes data from a server named sample-host. The application must:

You need to develop the application to meet the requirements.

Which code segment or segments should you use? (To answer, drag the appropriate code segment or segments to the correct location or locations. Each code

segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

### Code Segments

```
var host = "websocket://sample-host/echo";
```

```
var host = "ws://sample-host/echo";
```

```
var host = "http://sample-host/echo.svc";
```

### Segments

```
socket.onopen
```

```
socket.open
```

```
open.socket
```

### Answer Area

Code Segment

```
socket = new WebSocket(host);
```

Segment

```
= function (openEvent) {
```

```
document.getElementById("serverStatus").innerHTML =  
'WebSocket Status:: Socket Open';
```

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Code Segment: var host = "ws://sample-host/echo"; Segment: socket.onopen

References: <https://docs.microsoft.com/en-us/microsoft-edge/dev-guide/networking-and-connectivity/websocket>

**NEW QUESTION 149**

Which panel can you use to access a list of the HTML elements, controls, and media that can be added to an HTML page that is open in the artboard?

- A. Projects
- B. Assets
- C. Device
- D. Live DOM

**Answer:** B

**Explanation:**

References: [http://www.daoudisamir.com/references/vs\\_ebooks/html5\\_css3.pdf](http://www.daoudisamir.com/references/vs_ebooks/html5_css3.pdf)

**NEW QUESTION 152**

Which technology is HTML5 preceded by and derived from?

- A. HTML 4.01
- B. SGML
- C. XHTML 1.0
- D. XML

**Answer:** A

**Explanation:**

References: [http://www.daoudisamir.com/references/vs\\_ebooks/html5\\_css3.pdf](http://www.daoudisamir.com/references/vs_ebooks/html5_css3.pdf)

**NEW QUESTION 155**

What are the steps for TDD?

- A. Write the passing test, write the code, run the test again to validate that it still passes.
- B. Write the failing test, write the code, run the test again to validate that it passes.
- C. Write the code, write the test to validate that it passes, run the test again to validate that it still passes.
- D. Write the passing test, write the code, break the code, run the test again to validate that it fails.

**Answer:** B

**Explanation:**

References: [http://www.daoudisamir.com/references/vs\\_ebooks/html5\\_css3.pdf](http://www.daoudisamir.com/references/vs_ebooks/html5_css3.pdf)

**NEW QUESTION 158**

NOTE: This question is a part of series of questions that presents the same scenario. Each question in the series contains unique solution that might meet the started goals. Some questions sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section. you will not be able to return to it. As a result, these questions will not appear in the review screen.

You have the following HTML5 and CSS3 markup within a webpage.

```
<nav id="mainmenu" class="page-nav">
  <div id="navlist" class="container">
    <a href="index.html">Home</a>
    <a href="register.html">Register</a>
  </div>
</nav>
```

You need to set the background color of the Home link to yellow. The solution can affect the color of the other elements.  
Solution: You use the following style:

```
<style>
  #navlist::first-line{
    background-color: yellow;
  }
</style>
```

Does this meet the goal?

- A. Yes
- B. No

**Answer: B**

#### NEW QUESTION 161

You have a web API that responds to a GET request and returns an image as an array of bytes.  
You need to create a page that contains a button to requests the image. The response must be displayed as an image on the page.  
Which two code segments can you use to achieve the goal? Each correct answer presents a complete solution.  
NOTE: Each correct selection is worth one point.

A

```
<!DOCTYPE html>
<html>
<body>
  <button type="button" onclick="getImage()">Get Image</button>
  <br/>
  <img id="image"/>
  <script>
    function getImage() {
      var xhttp = new XMLHttpRequest();
      xhttp.open("GET", "/api/pic", true);
      xhttp.responseType = "blob";
      xhttp.onload = function (e) {
        var blod = event.response;
        var urlCreator = window.URL || window.webkitURL;
        var image Url = urlCreator.createObjectURL(blob);
        document.querySelector("#image").src = imageUrl;
      }
      xhttp.send();
    }
  </script>
</body>
</html>
```

B

```
<!DOCTYPE html>
<html>
<head>
  <script src="http://ajax.aspnetcdn.com/ajax/jQuery/jquery-3.2.1.js"></script>
</head>
<body>
  <button type="button" onclick="getImage()">Get Image</button>
  <br/>
  <img id="image" />
  <script>
    function getImage() {
      $.get({
        url: "/api/pic",
        dataType: "plainObject",
        success: function (result) {
          var urlCreator = window.URL || window.webkitURL;
          var image Url = urlCreator.createObjectURL(result);
          document.querySelector("#image").src = imageUrl;
        }
      });
    }
  </script>
</body>
</html>
```

C

```
<!DOCTYPE html>
<html>
<head>
  <button type="button" onclick="getImage()">Get Image</button>
  <br/>
  <img id="image"/>
  <script>
    function getImage() {
      var xhttp = new XMLHttpRequest();
      xhttp.open("GET", "/api/pic", true);
      xhttp.responseType = "arraybuffer";
      xhttp.onload = function (e) {
        var blob = new Blob([xhttp.response], {type: "application/octet-stream" });
        var urlCreator = window.URL || window.webkitURL;
        var image Url = urlCreator.createObjectURL(blob);
        document.querySelector("#image").src = imageUrl;
      }
      xhttp.send();
    }
  </script>
</body>
</html>
```

D

```
<!DOCTYPE html>
<html>
<body>
  <button type="button" onclick="getImage()">Get Image</button>
  <br/>
  <img id="image"/>
  <script>
    function getImage() {
      var xhttp = new XMLHttpRequest();
      xhttp.open("GET", "/api/pic", true);
      xhttp.responseType = "text";
      xhttp.onload = function (event) {
        var blob = event.response;
        var urlCreator = window.URL || window.webkitURL;
        var image Url = urlCreator.createObjectURL(blob);
        document.querySelector("#image").src = imageUrl;
      }
      xhttp.onloadstart(loadend);
    }
  </script>
</body>
</html>
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Answer: BC

**NEW QUESTION 166**

You have the following markup.

```
<div id="yellow" style="background-color:yellow">My Yellow Content</div>
<div id="blue" style="background-color:blue">My Blue Content</div>
<div id="red" style="background-color:red">My Red Content</div>
```

You need to change the markup programmatically to display as follows:

Which line of code should you use?

- A. document.getElementById("blue").style.display = "none"
- B. \$("#blue").css("visibility", "collapse");
- C. document.getElementById("blue").style.visibility = "hidden"
- D. \$("#blue").css("display", "hidden");

Answer: A

**NEW QUESTION 168**

HOTSPOT

You have the following markup.

```
<style>
  div p.car {color: blue}
  #sidebar p {color: yellow}
  .Boat {color: red}
</style>

<div id="sidebar">
  <p class="car">Car</p>
  <p class="Boat">Boat</p>
  <p style="color:violet">Plane</p>
</div>
```

You need to identify in which color each value will be displayed.  
Which color should you identify? To answer, select that appropriate options in the answer are a.  
NOTE: Each correct selection is worth one point.

### Answer Area

● ● ● ● ●

Boat:   
Blue  
Red  
Violet  
Yellow

Car:   
Blue  
Red  
Violet  
Yellow

Plane:   
Blue  
Red  
Violet  
Yellow

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**  
Boat: Red Car: Blue Plane: Violet
